IntraForge — Training Guide

IntraForge Local Edition 1.5.7

Build. Store. Connect. Privately.

Contents

1. Welcome to IntraForge
2. Lesson 1 — Signing in and finding your way
3. Lesson 2 — The owner: the Control Center, the licence and people
4. Lesson 3 — Files and data
5. Lesson 4 — Spare Parts and Pharmacy
6. Lesson 5 — The Movie Shop and its customer portal
7. Lesson 6 — IntraForge Pay
8. Lesson 7 — Keeping the shop safe
9. Lesson 8 — The internet café website
10. Lesson 9 — Practice and help

Welcome to IntraForge

IntraForge is your shop's own business system. It runs on one PC in the shop, keeps all data on that PC (never on the internet unless the owner switches that on), and gives everyone a browser page to work in: the shop's files, its databases, and the applications the shop uses every day — **Spare Parts** (or **Pharmacy**) for stock and sales, the **Movie Shop** for selling films and music onto customers' USB drives, and **IntraForge Pay** for the shop's wallet payments.

How to use this guide

Each lesson is for one kind of person in the shop. Read the lesson for your job, follow the steps on a real IntraForge (a test copy is ideal for practice), then do the exercise at the end.

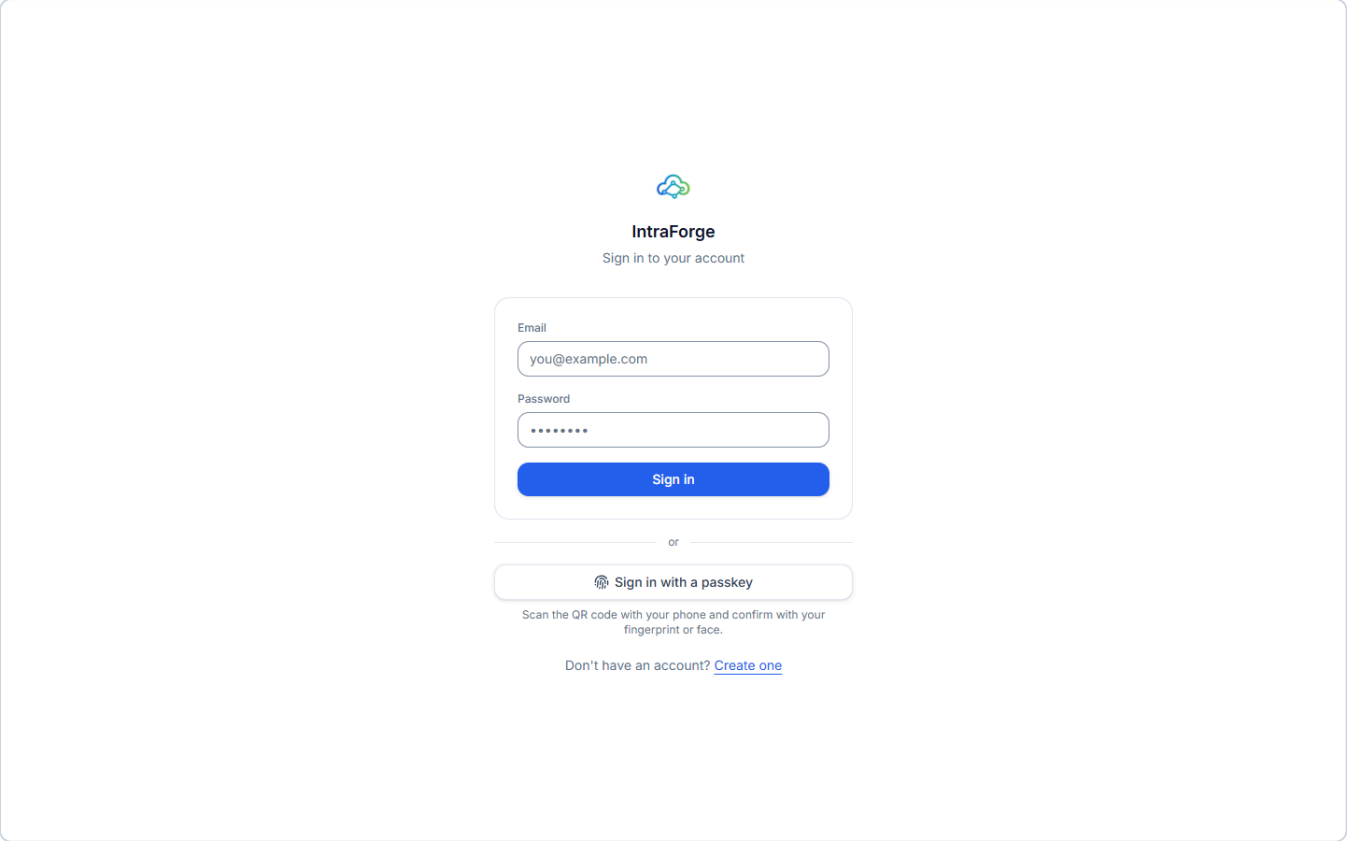

Lesson	Who it is for
1. Signing in and finding your way	Everyone
2. The owner: the Control Center, the licence, people	The shop owner or administrator
3. Files and data	Anyone who keeps files or tables
4. Spare Parts and Pharmacy	Cashiers, stock keepers, managers
5. The Movie Shop and its customer portal	Counter staff and customers
6. IntraForge Pay	Cashiers and supervisors
7. Keeping the shop safe	The owner or administrator
8. Practice exercises and help	Everyone

> **Words used here.** *Organization* = your company in IntraForge. *Workspace* and *project* = folders that group your work. *Bucket* = a place for files. *App* = an application installed in IntraForge (Spare Parts, Pay ...).

Lesson 1 — Signing in and finding your way

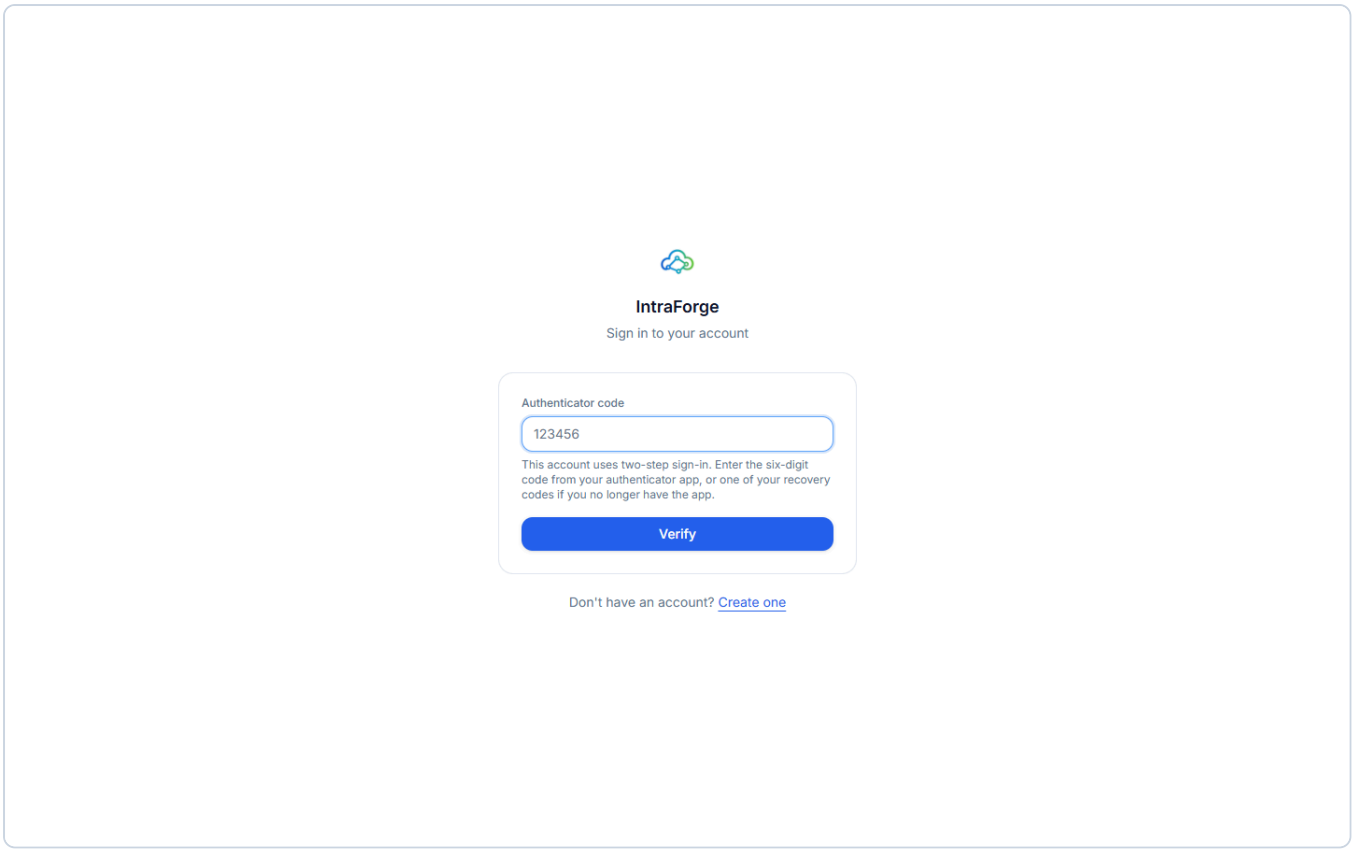

Signing in

Open IntraForge in the browser. On the shop PC the address is **https://localhost:8443**; on another PC in the shop it is the address the owner gives you (for example **https://desktop-shop:8443**).

The sign-in page

1. Type your **email** and **password**, then press **Sign in**.
2. If your account uses **two-step sign-in**, a second box asks for the **6-digit code** from the authenticator app on your phone. Type it and press **Verify**.

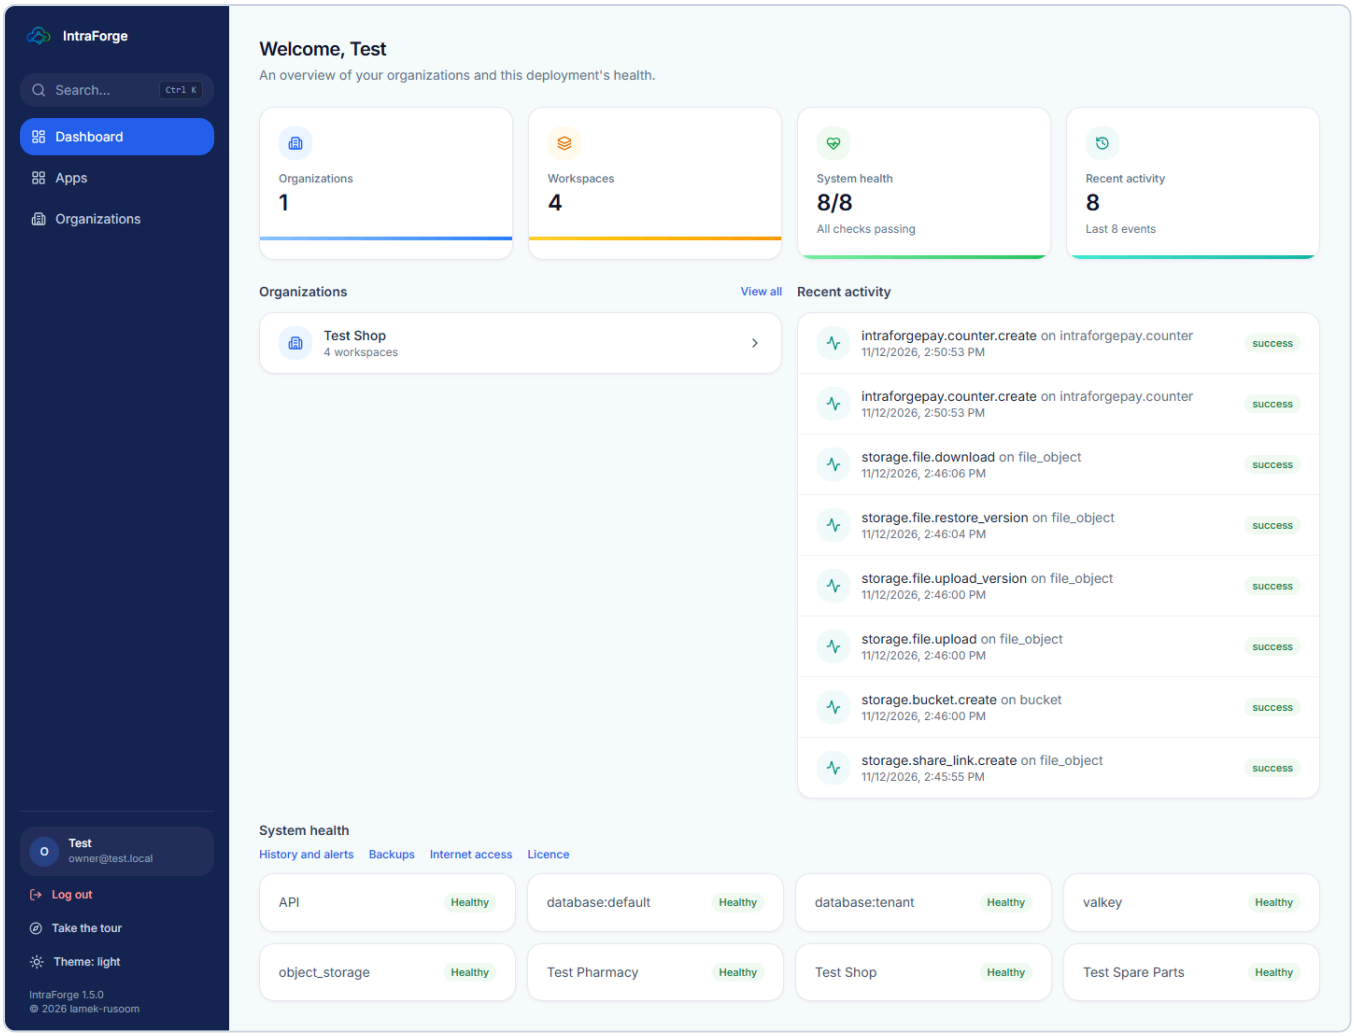

Two-step sign-in asks for the code from your phone

> Lost your phone? Each person with two-step sign-in has **recovery codes** (saved when two-step was switched on). Type one of them instead of the 6-digit code. Each code works once.

If the owner reset your password, IntraForge first asks you to **choose your own password**: type the temporary password, then your new password twice. Nothing else opens until you do.

The dashboard

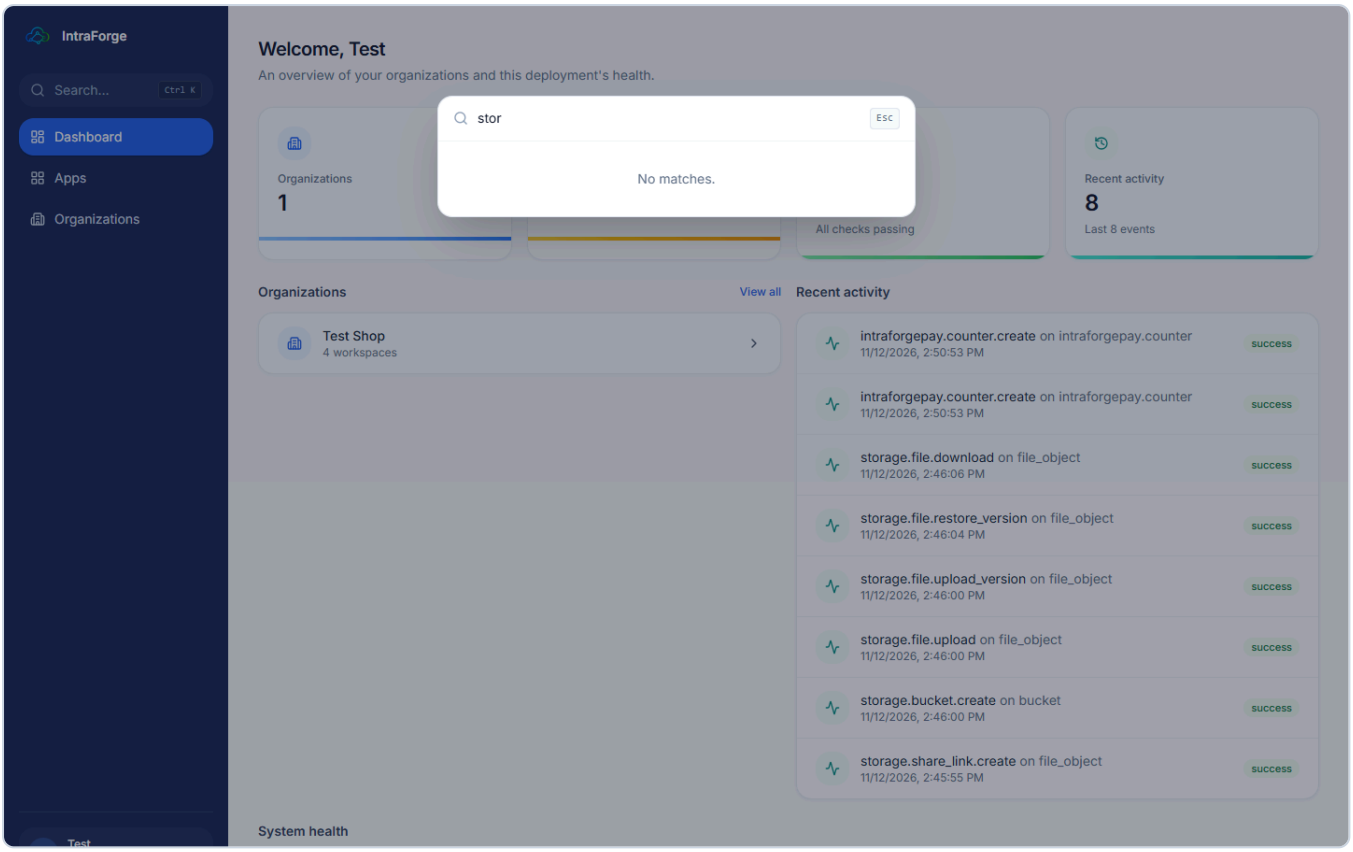

After signing in you see the **Dashboard**: your organizations, the health of the system and the latest activity.

The dashboard

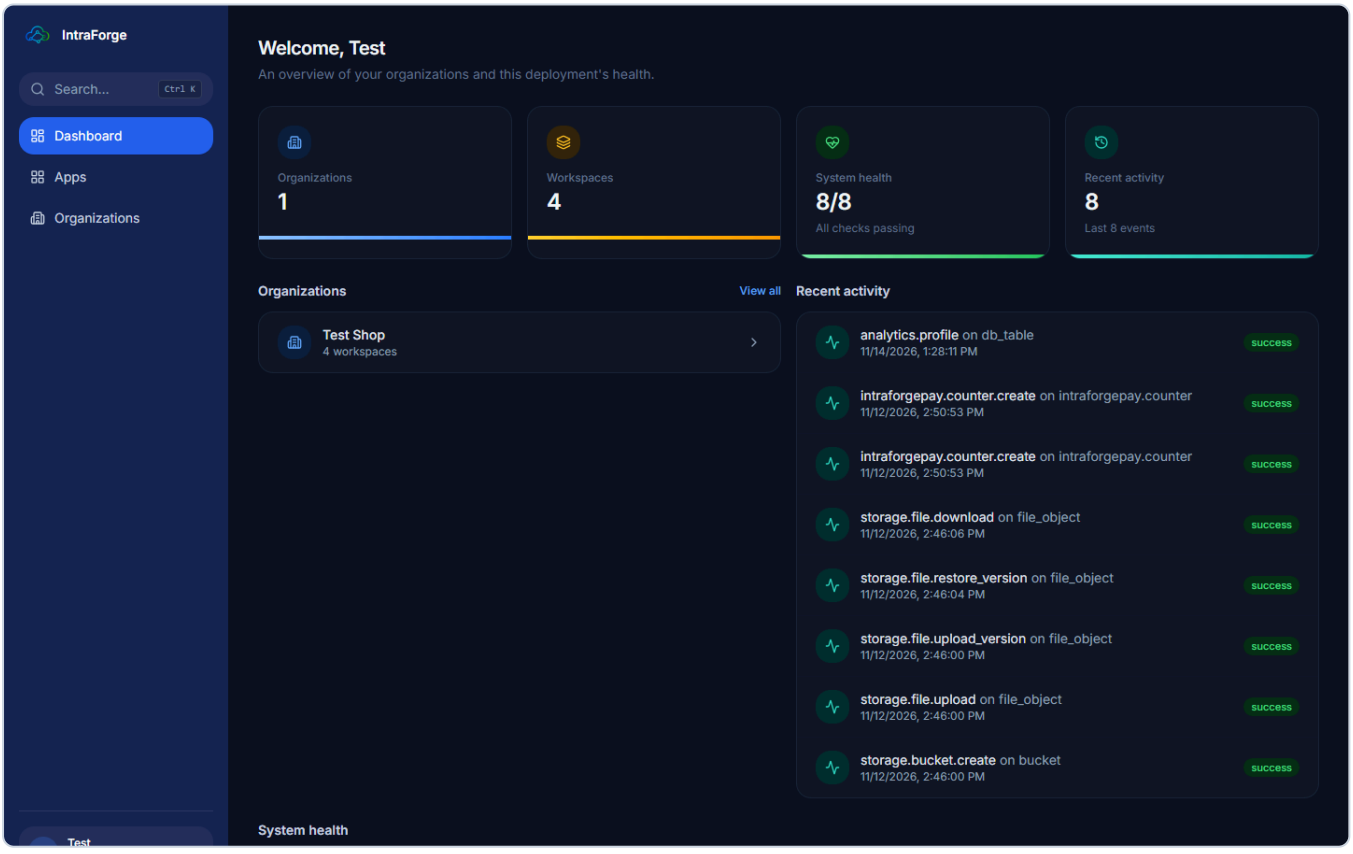

On the left is the **sidebar**: Dashboard, Apps, Organizations, and at the bottom your name, **Log out**, **Take the tour** and **Theme**.

- **Search (Ctrl K):** press **Ctrl** and **K** together anywhere to find a page, a bucket, a database or an app by typing part of its name.

Ctrl K: type to find any page

- **Theme:** the **Theme** button switches between *like this computer*, *light* and *dark*.

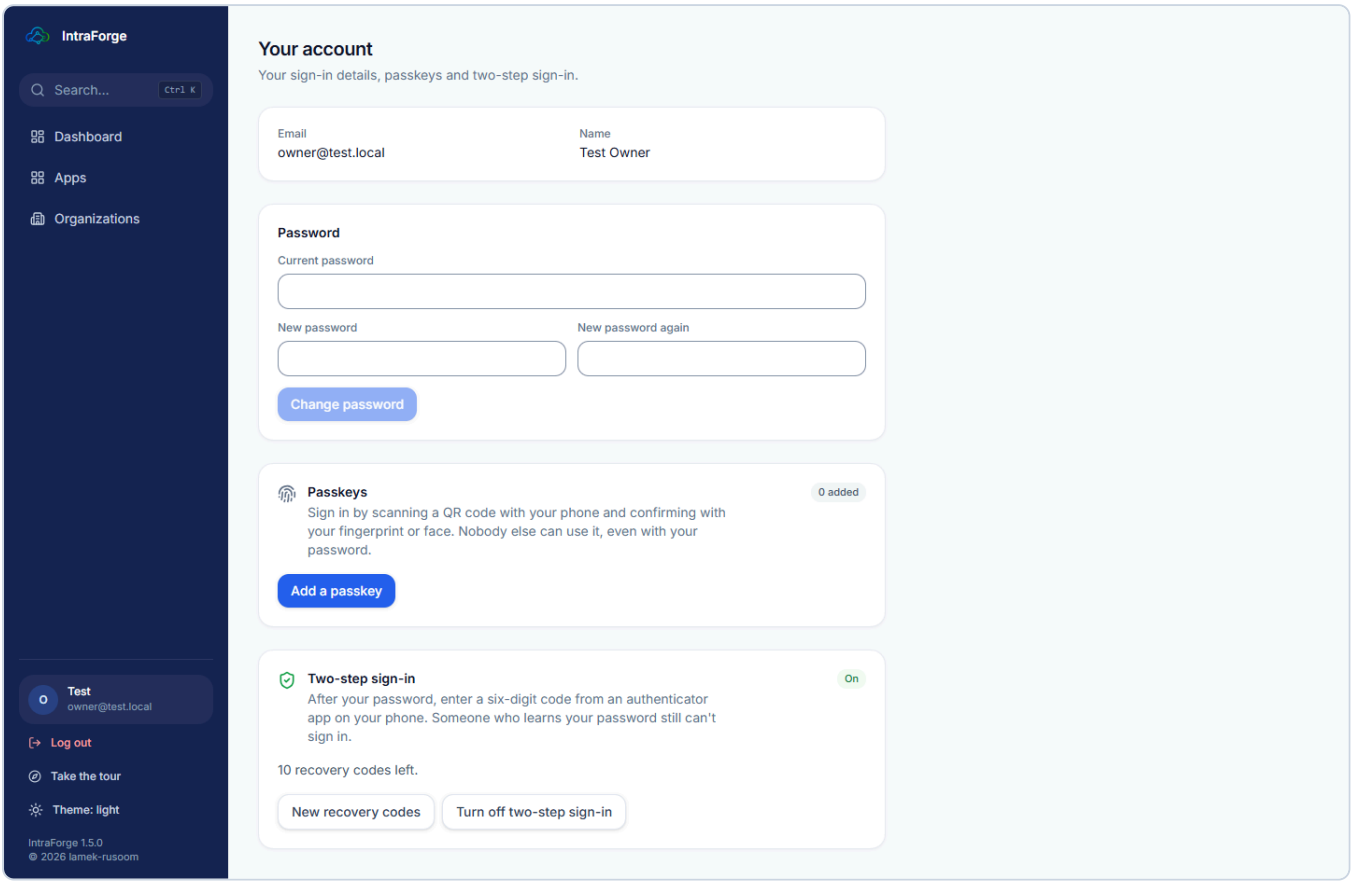

The dashboard in dark mode

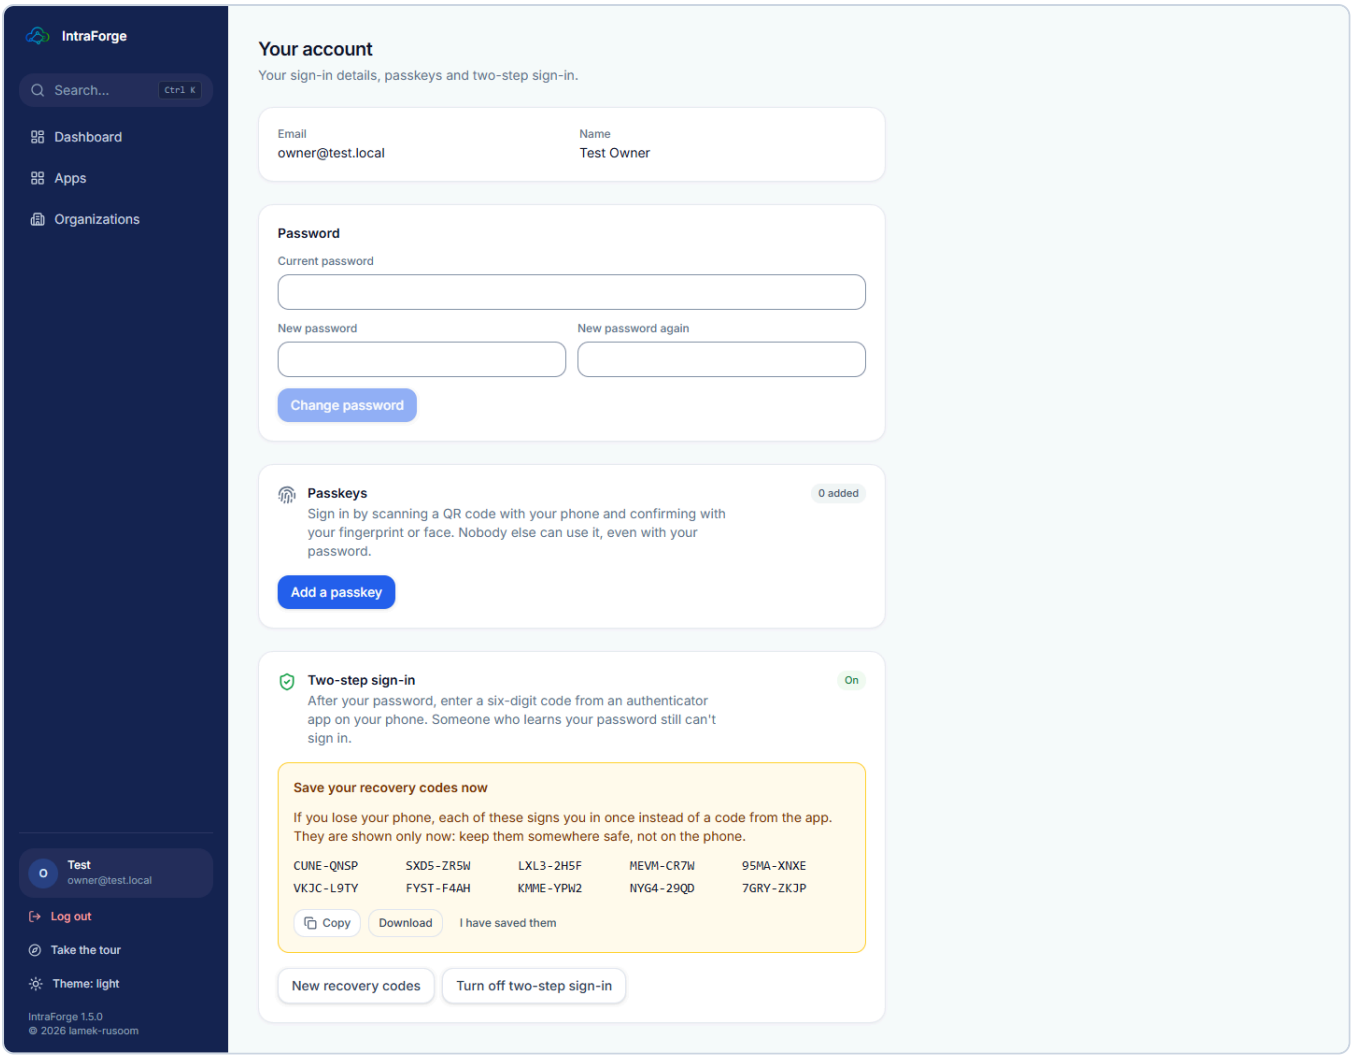

Your account

Click your name at the bottom of the sidebar to open **Your account**. Here you can:

- **Change your password** (type the current one, then the new one twice).
- Add a **passkey** (sign in with your fingerprint or face on a phone).
- Switch **two-step sign-in** on or off, and make **new recovery codes**.

Your account: password, passkeys and two-step sign-in

Recovery codes are shown once: save them

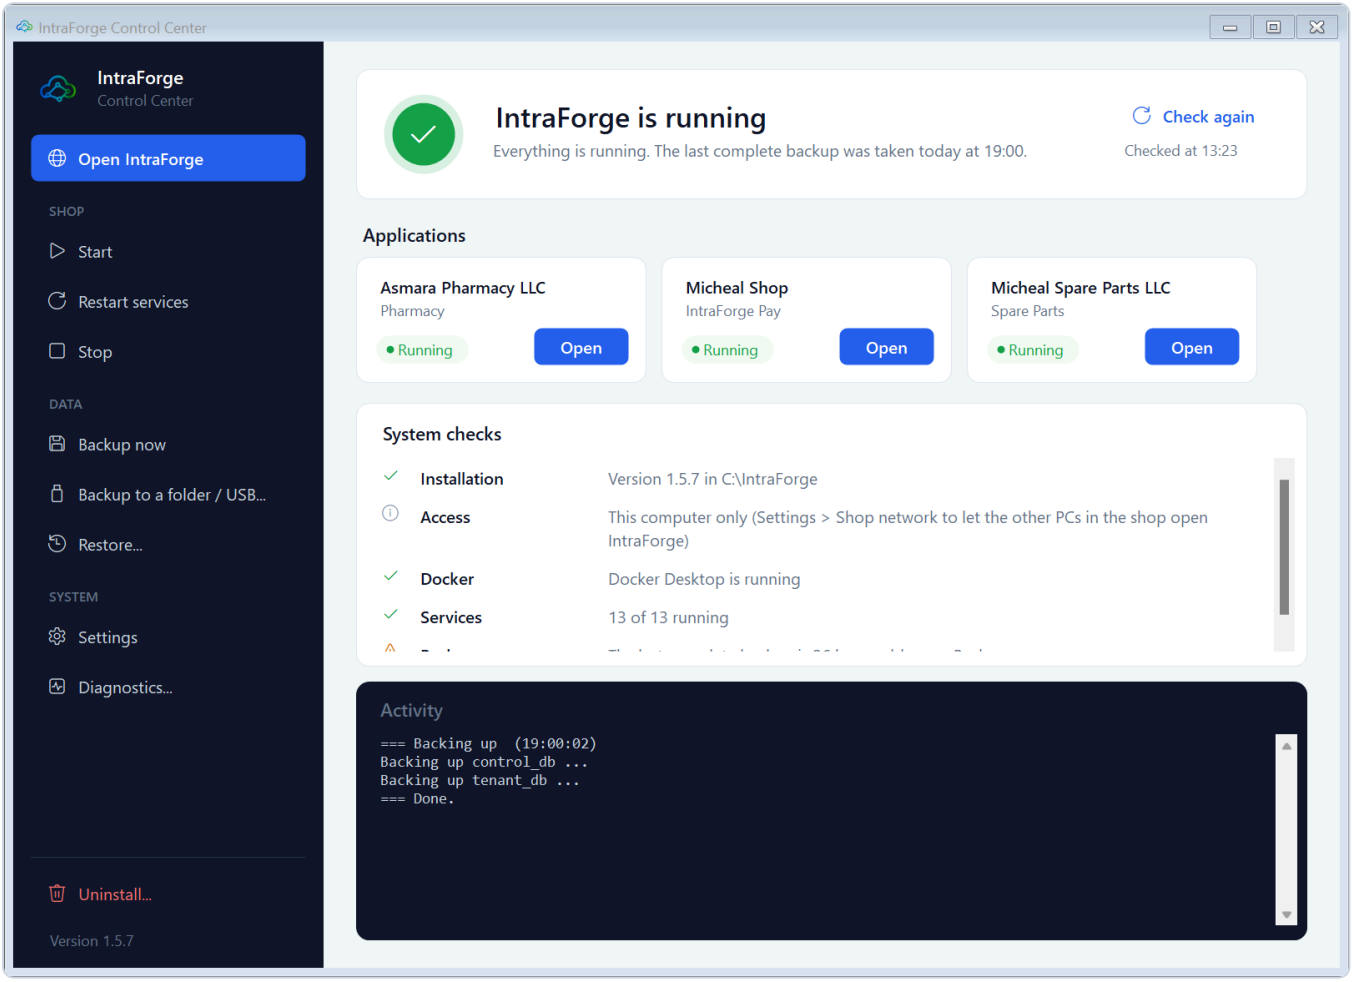

Exercise 1

1. Sign in. 2. Press Ctrl K and open your organization by typing its name. 3. Switch the theme to dark and back.
2. Open Your account and look at your two-step sign-in status.

Lesson 2 — The owner: the Control Center, the licence and people

The Control Center (on the shop PC)

The **IntraForge Control Center** is the program on the shop PC (the **IntraForge** shortcut on the Desktop). It starts and stops IntraForge, shows whether everything is healthy, takes backups and restores them, and lets the other PCs in the shop in.

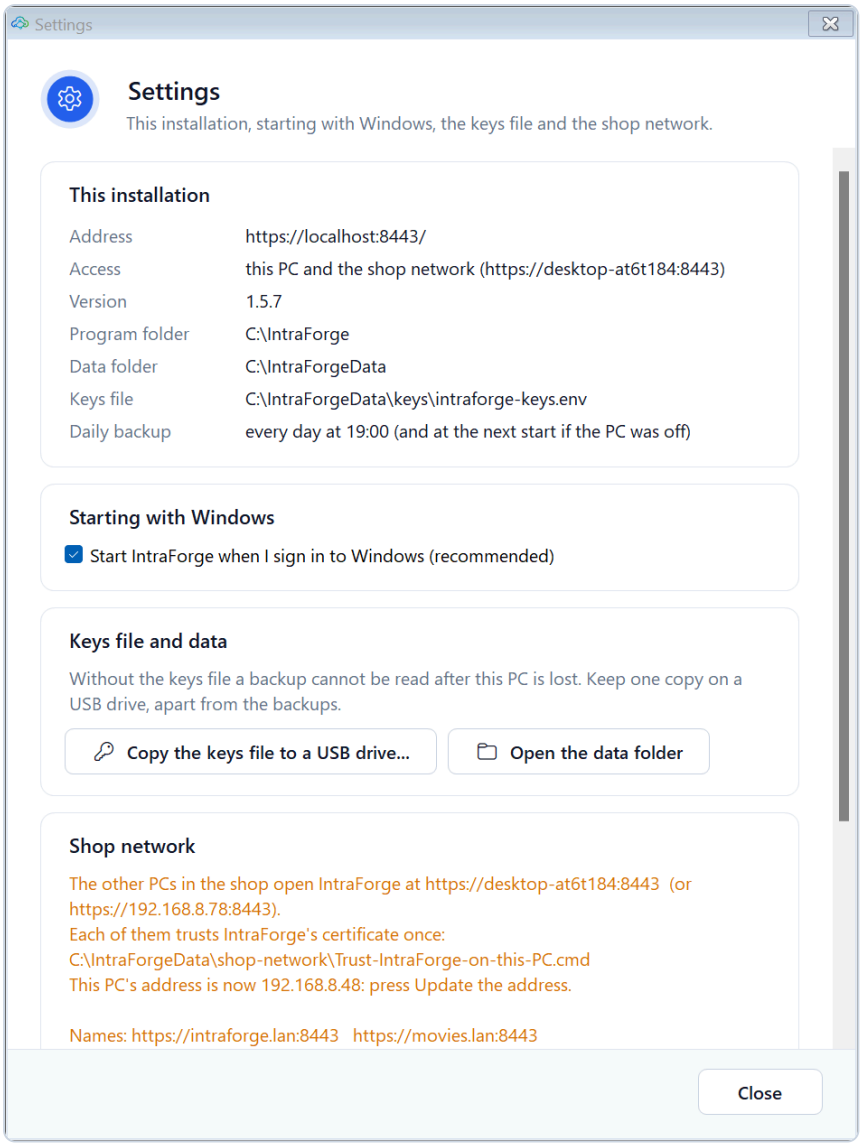

The Control Center's main window

- **Start / Stop / Restart** IntraForge. **Open IntraForge** opens it in the browser.
- The checks show green when all is well; a yellow or red line says what to do.
- **Back up now** takes a complete backup (it also runs every night by itself).

Settings and the shop network

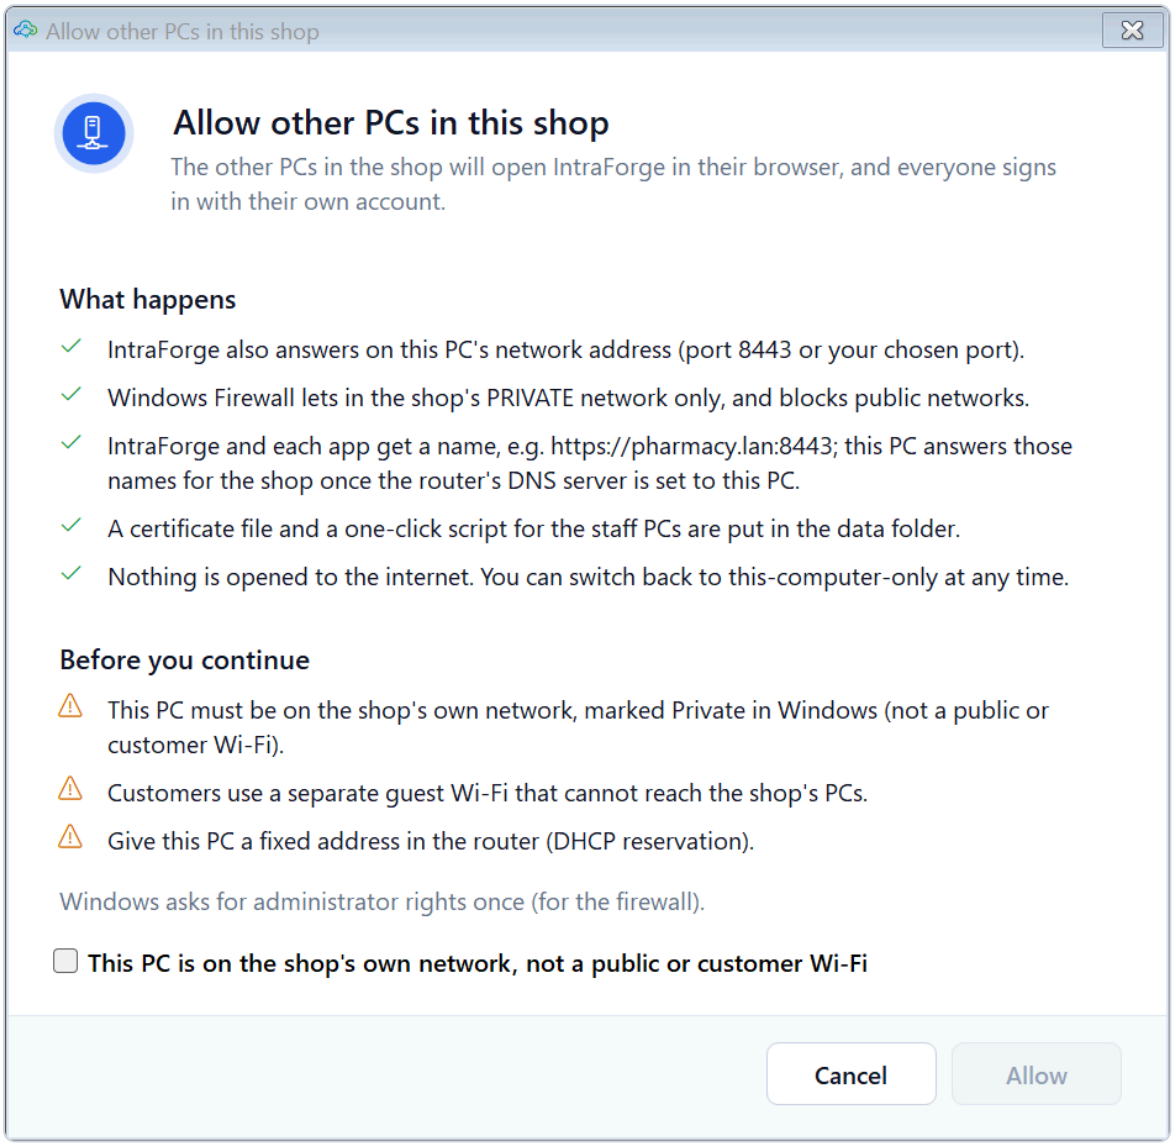

Settings shows where IntraForge is installed, whether it starts with Windows, and the **shop network**.

Settings

To let the other PCs and phones in the shop use IntraForge:

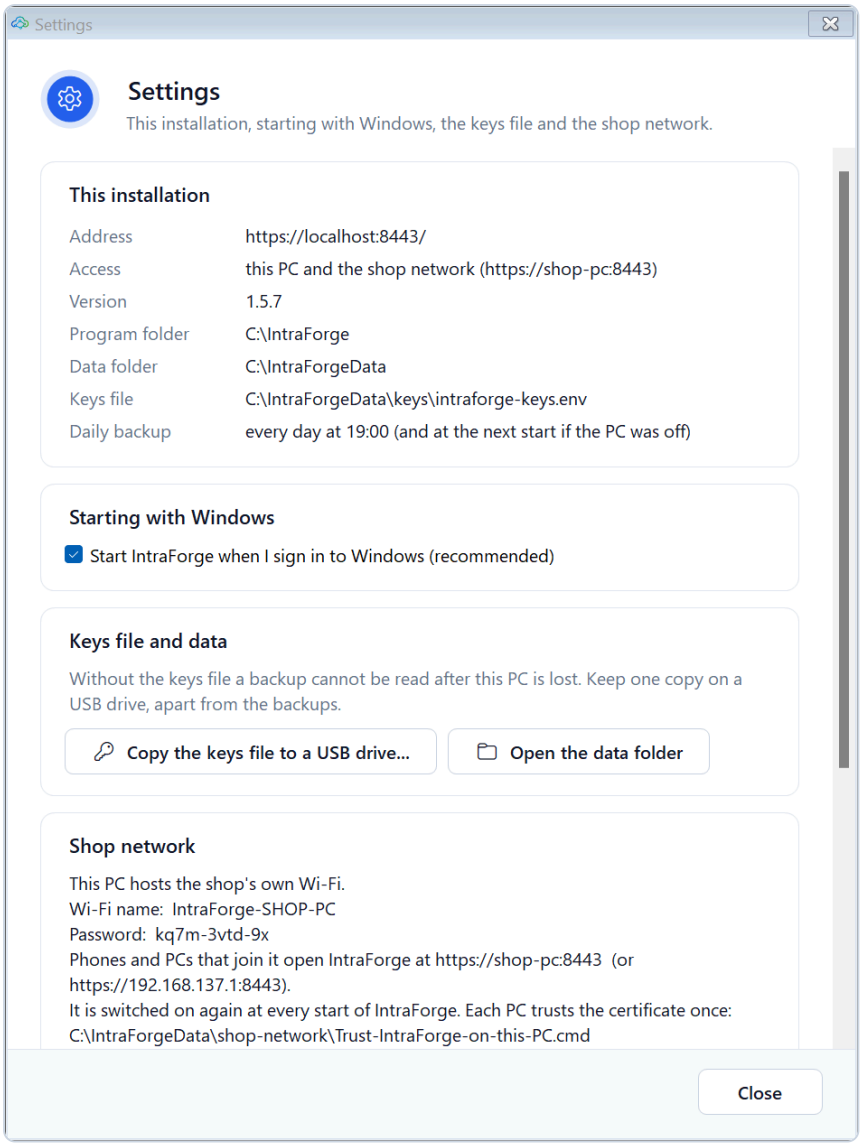

1. In Windows, make sure the shop's Wi-Fi is a **Private** network (Settings > Network & internet > Wi-Fi > your network > Network profile type: Private). Never do this on a café or customer Wi-Fi.
2. In the Control Center: **Settings > Shop network > Allow other PCs in this shop...**, tick that this is the shop's own network and press **Allow**.

Allowing the other PCs in the shop

1. Each other PC runs **Trust-IntraForge-on-this-PC.cmd** once (from the folder `C:\IntraForgeData\shop-network`) and opens the address shown in Settings.

No router in the shop? **Create a shop Wi-Fi from this PC** makes the PC itself the shop's Wi-Fi.

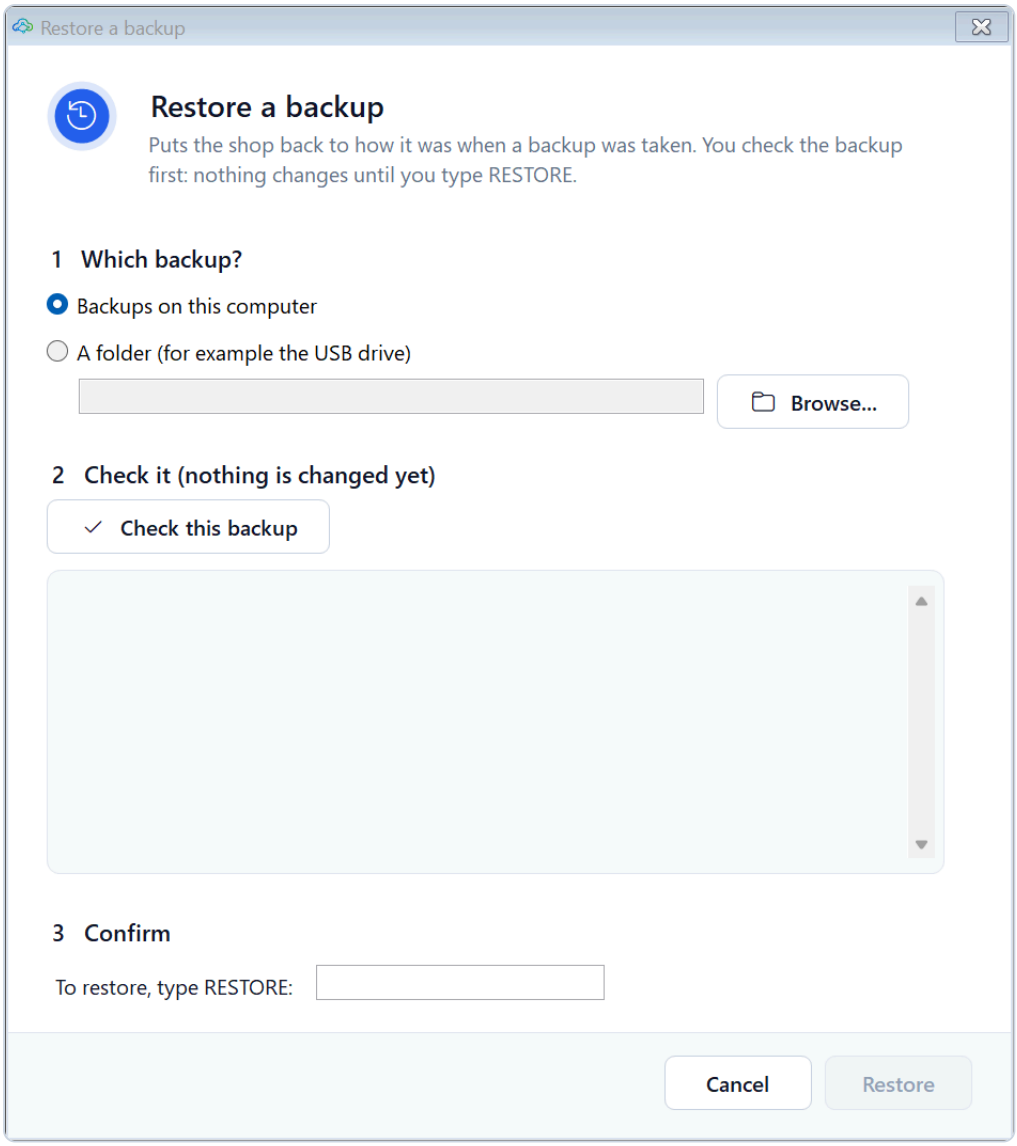

The shop Wi-Fi made by this PC

> If the PC moves to another network, IntraForge still starts for the PC itself. Back on the shop Wi-Fi, press **Settings > Shop network > Update the address** so the other PCs can reach it again.

Backups and restoring

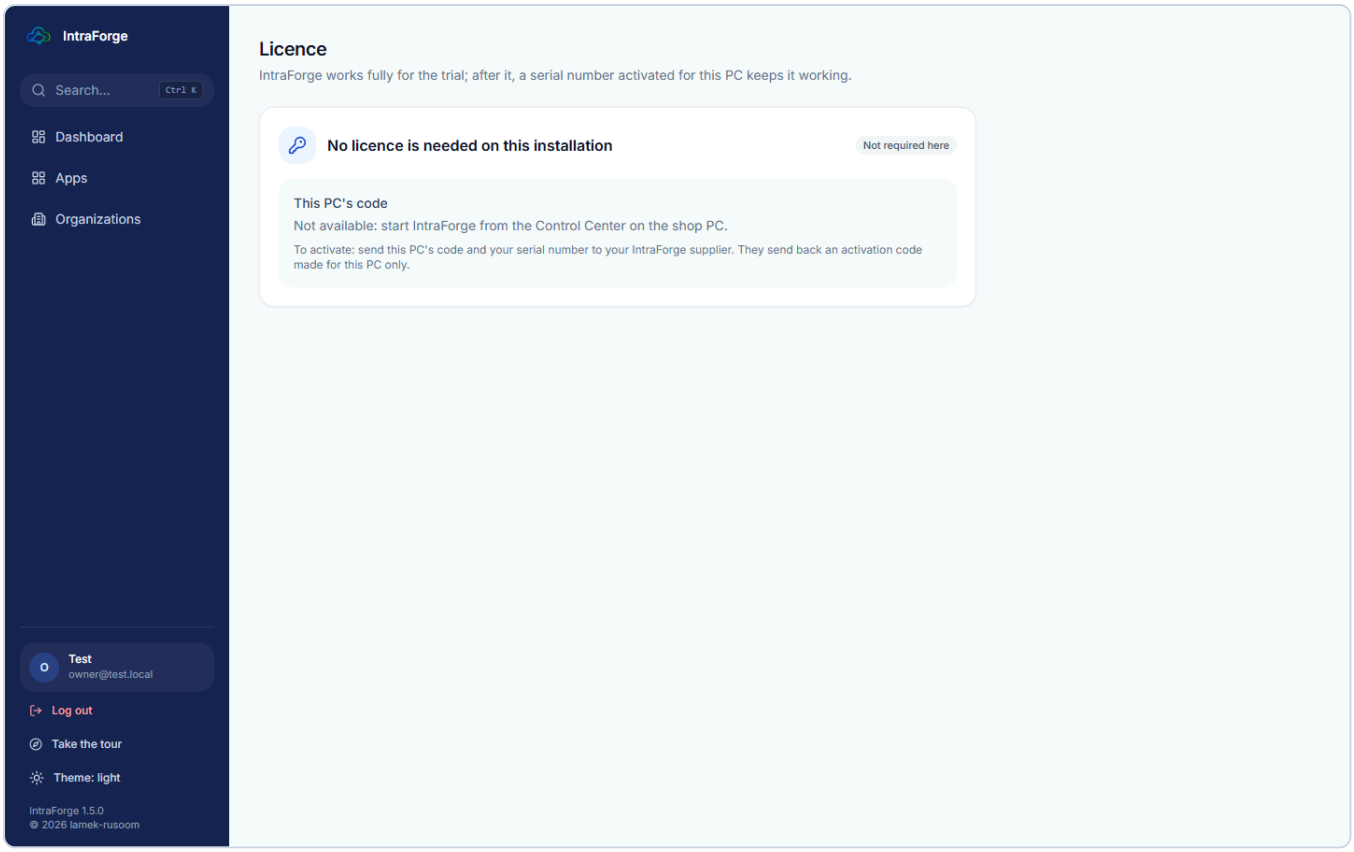

IntraForge backs everything up every night and tests that each backup can be restored. To put a backup back (for example after a mistake), use **Restore** in the Control Center. Restoring replaces today's data with the backup's, so it is done only here, never from a browser.

Restoring a backup

The licence

IntraForge works fully for **30 days** after it is first started. After that it needs a **serial number**; without one it becomes **read-only** (everyone can still sign in, see and export everything, and backups keep running, but nothing can be changed).

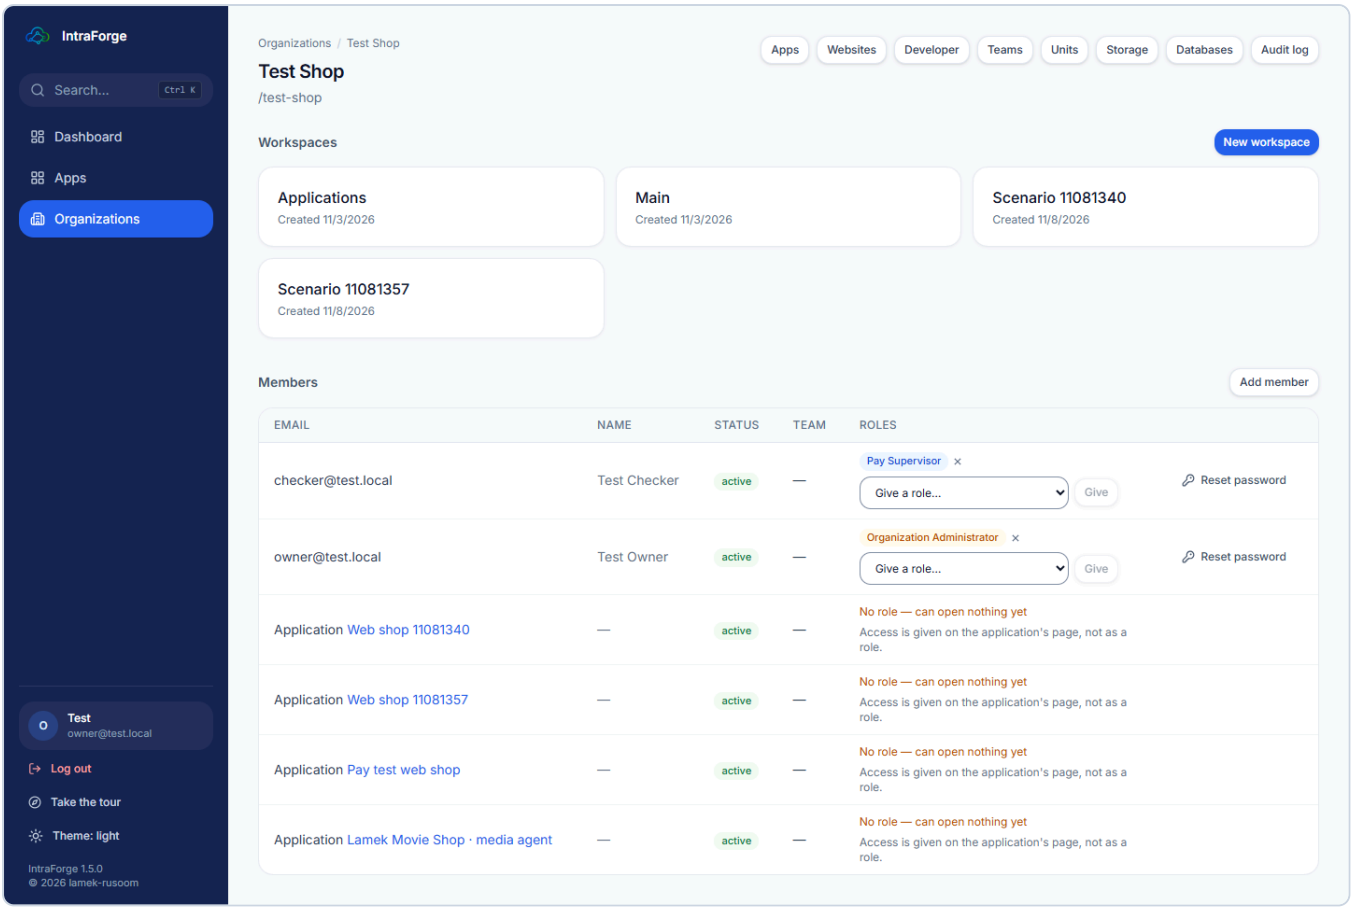

The licence page

To activate: open **Licence** (the link in the banner at the top, or `/license`), send **this PC's code** (PC-....) and your **serial number** to your IntraForge supplier, and type the **activation code** they send back.

Your organization and its people

Organizations lists your company (or companies). Open it to see its workspaces, members, roles and links to every page that belongs to it.

The organization page: workspaces and members

Adding a staff member

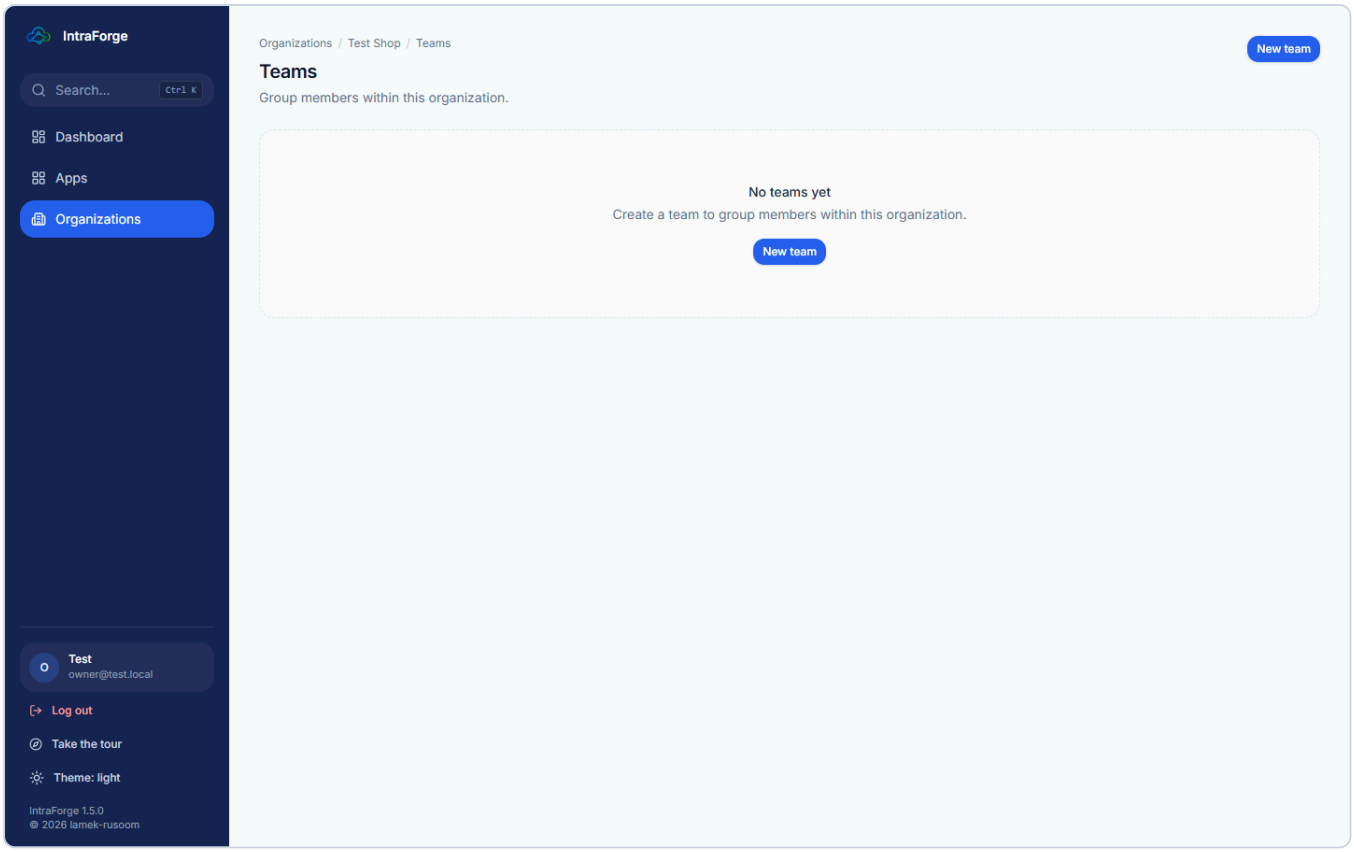

1. The staff member opens IntraForge on their PC, chooses **Create one** on the sign-in page and makes an account.
2. You: **Organizations > your shop > Add member**, type their email.
3. Give them a **role** in the member's row (for example *Cashier* for selling, *Stock keeper* for receiving). A person can do only what their role allows; the server checks every action.

A staff member forgot their password

In the member list press **Reset password**. IntraForge shows a **temporary password** once: give it to the person. They are signed out everywhere and must choose their own password when they sign in with it. (You can reset someone only if you manage every organization they belong to.)

Teams and units

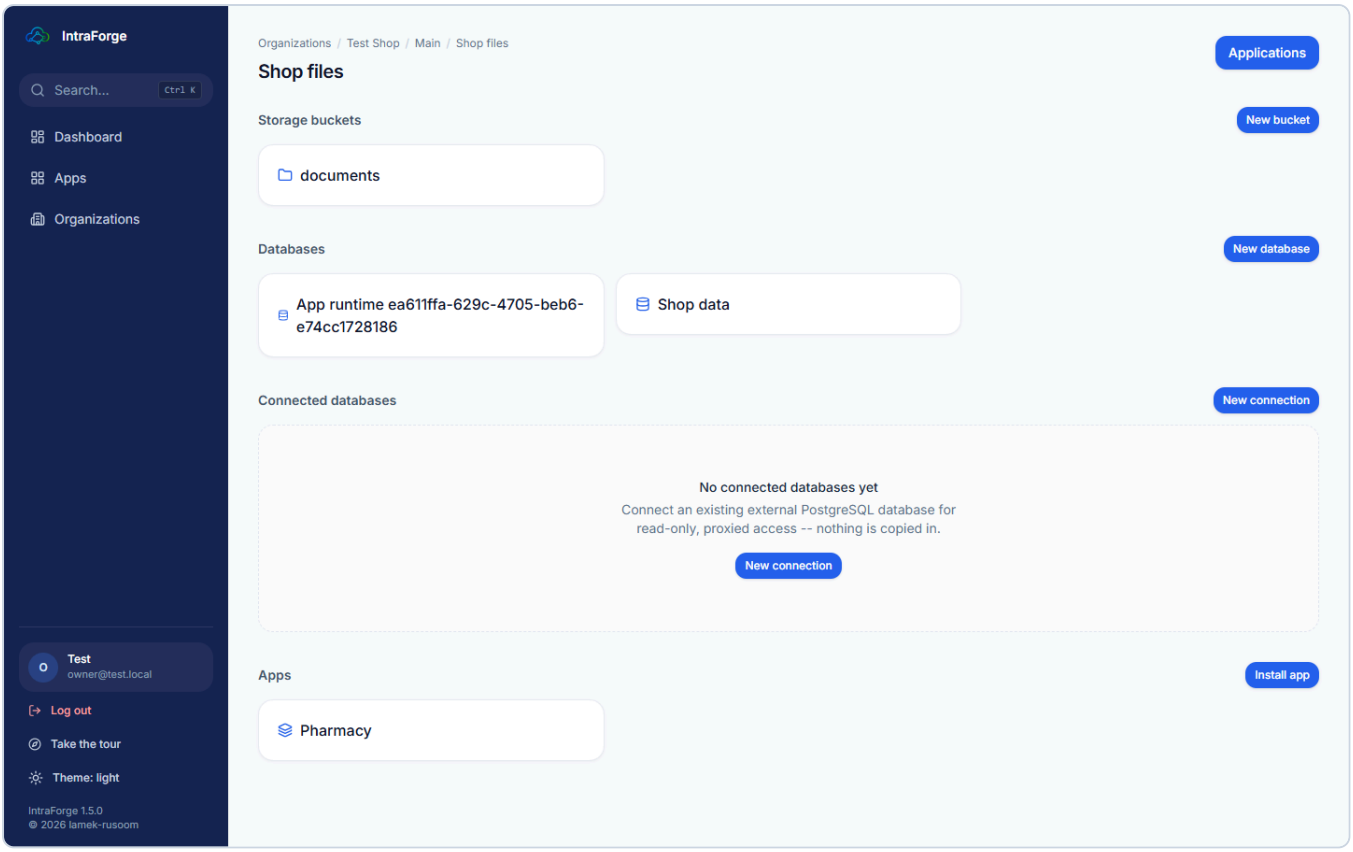

Teams group members (for example "Front counter"); **Units** describe branches and departments. Both are on the organization page.

Teams

Workspaces and projects

A **workspace** groups **projects**; a project holds the shop's **buckets** (files), **databases** and installed **apps**.

A project: its buckets, databases and connected databases

Exercise 2

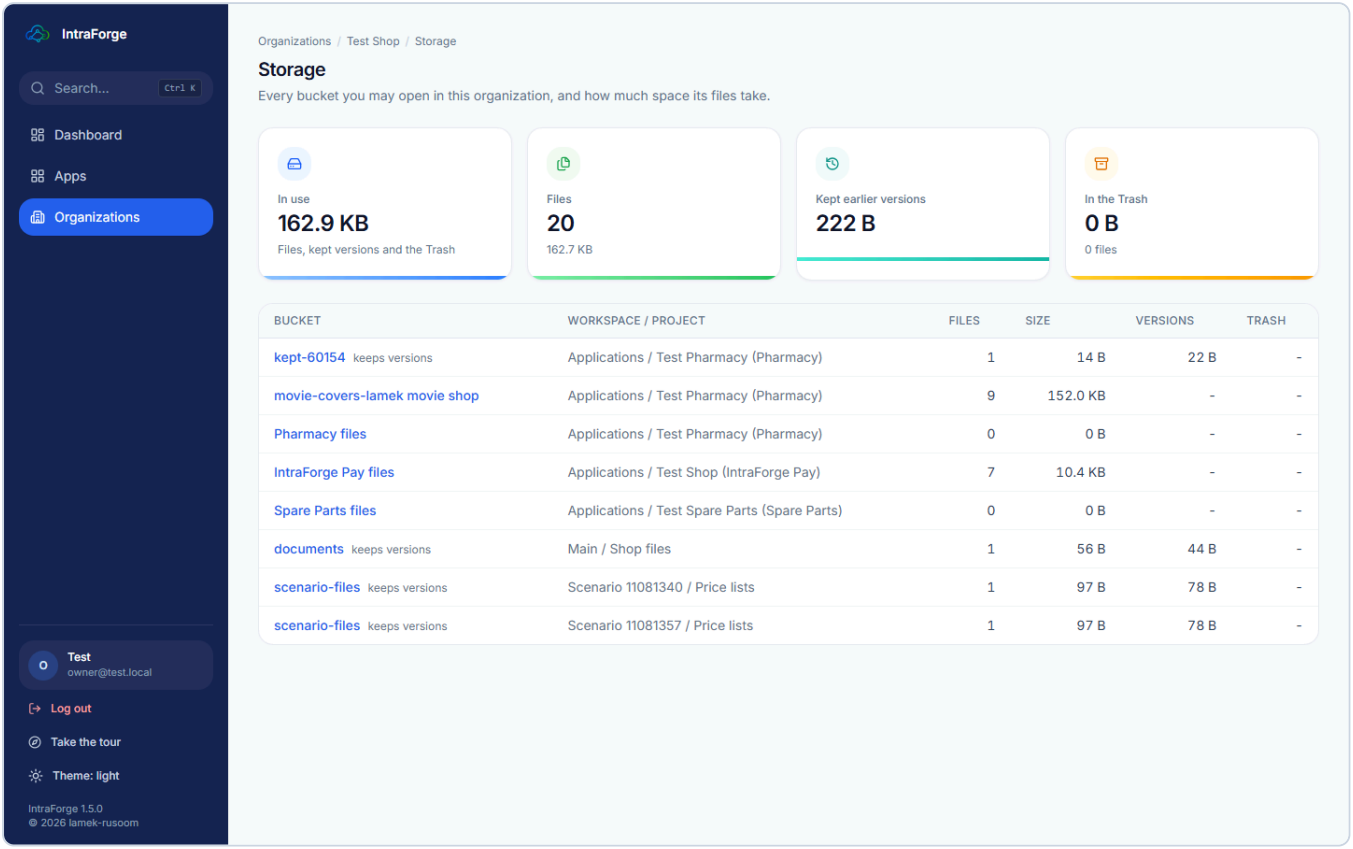

1. In a test copy, add a second member and give them a role. 2. Sign in as that person in another browser and see what

they can and cannot open. 3. Reset their password and sign in with the temporary one.

Lesson 3 — Files and data

Storage: all your buckets

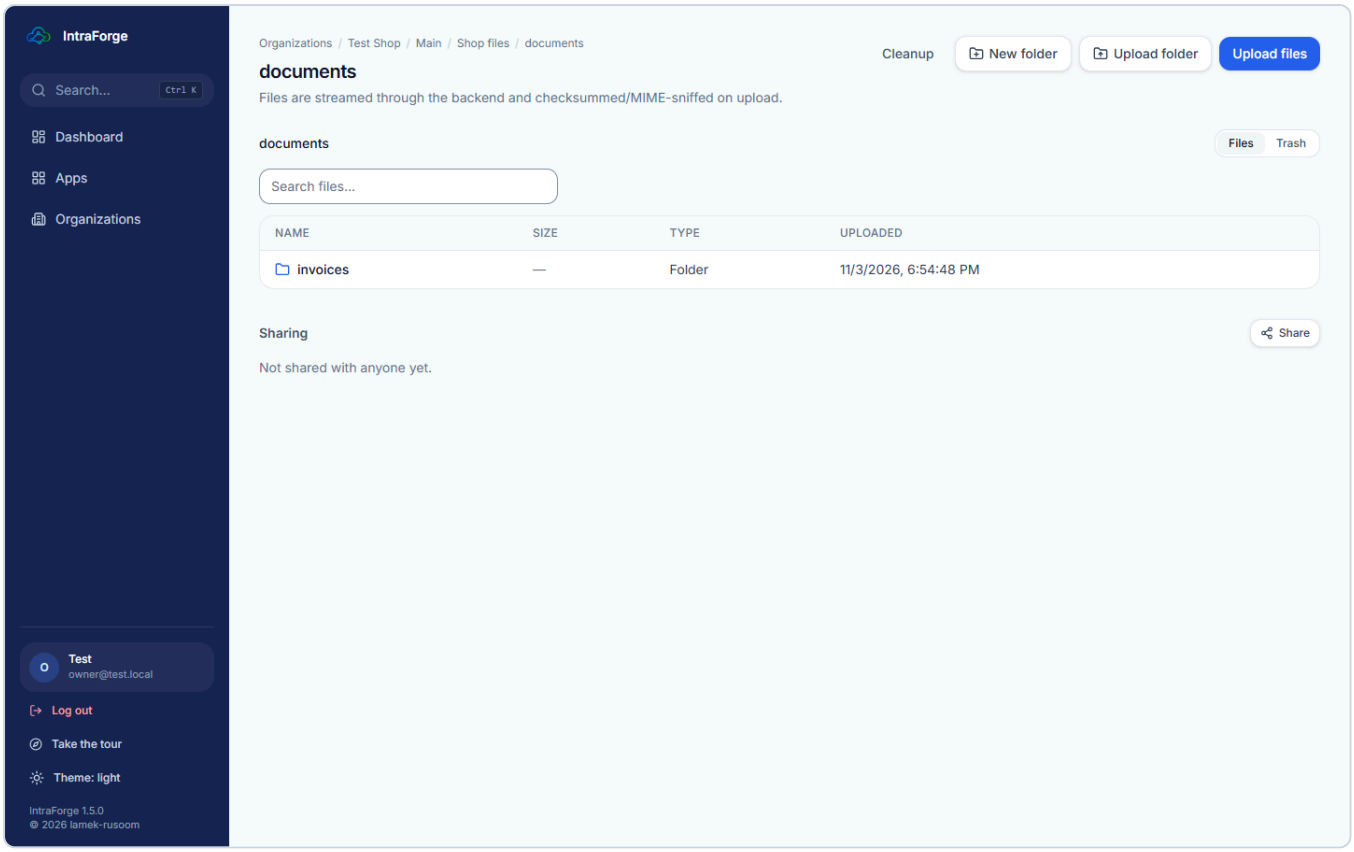

Organization > Storage lists every bucket you may open, with its files, size, kept versions and the Trash, and the totals for the organization.

Storage: every bucket and how much space it uses

A bucket

Open a bucket to see its folders and files.

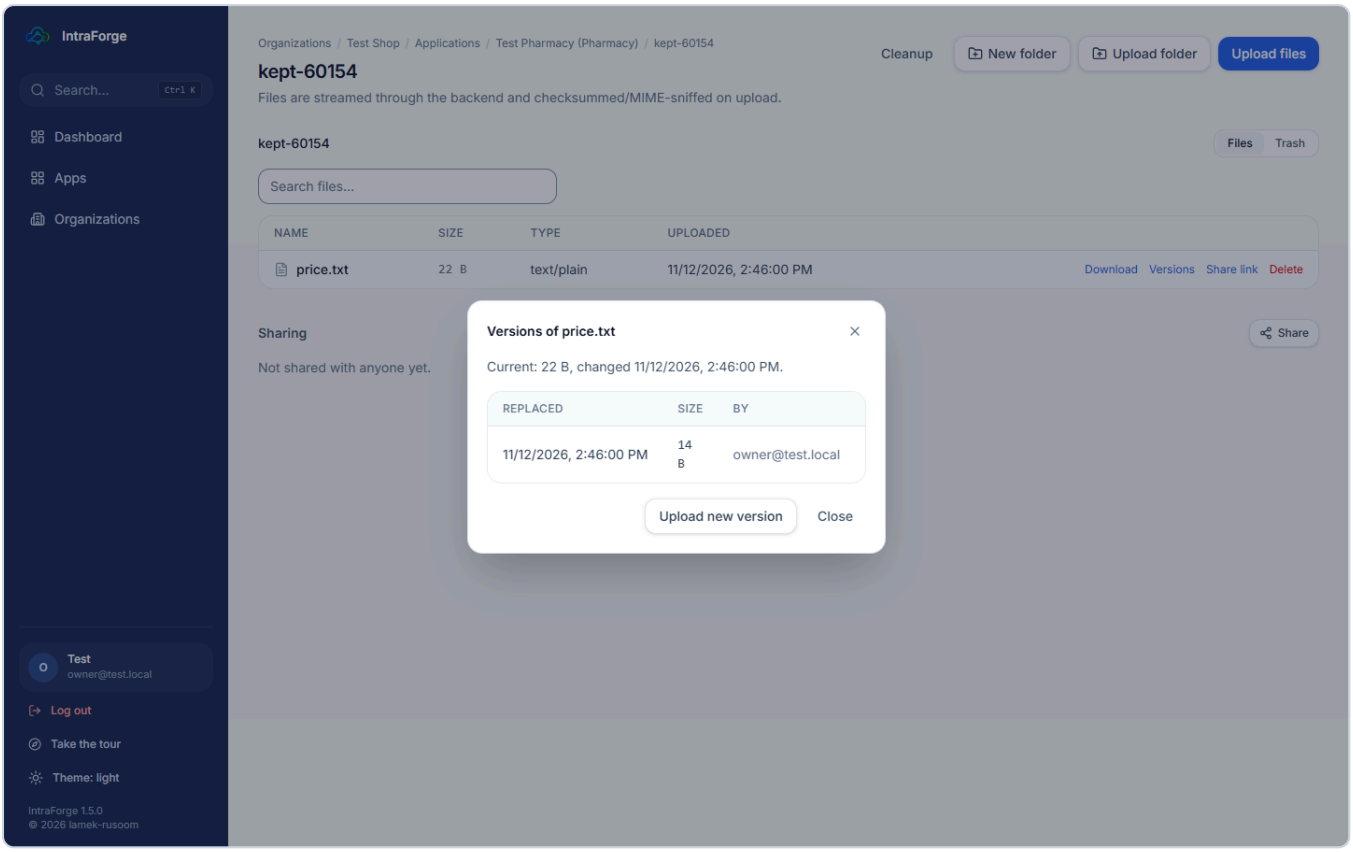

A bucket

- **Upload files** — choose one or more files from the computer.
- **Upload folder** — choose a whole folder; its sub-folders are made in the bucket and each file goes into its own.
- **New folder**, and the search box to find a file by name.
- Each file has **Download**, **Versions**, **Share link** and **Delete**.
- **Delete** moves a file to the **Trash** (top right: Files / Trash), where it can be **restored**.

Earlier versions of a file

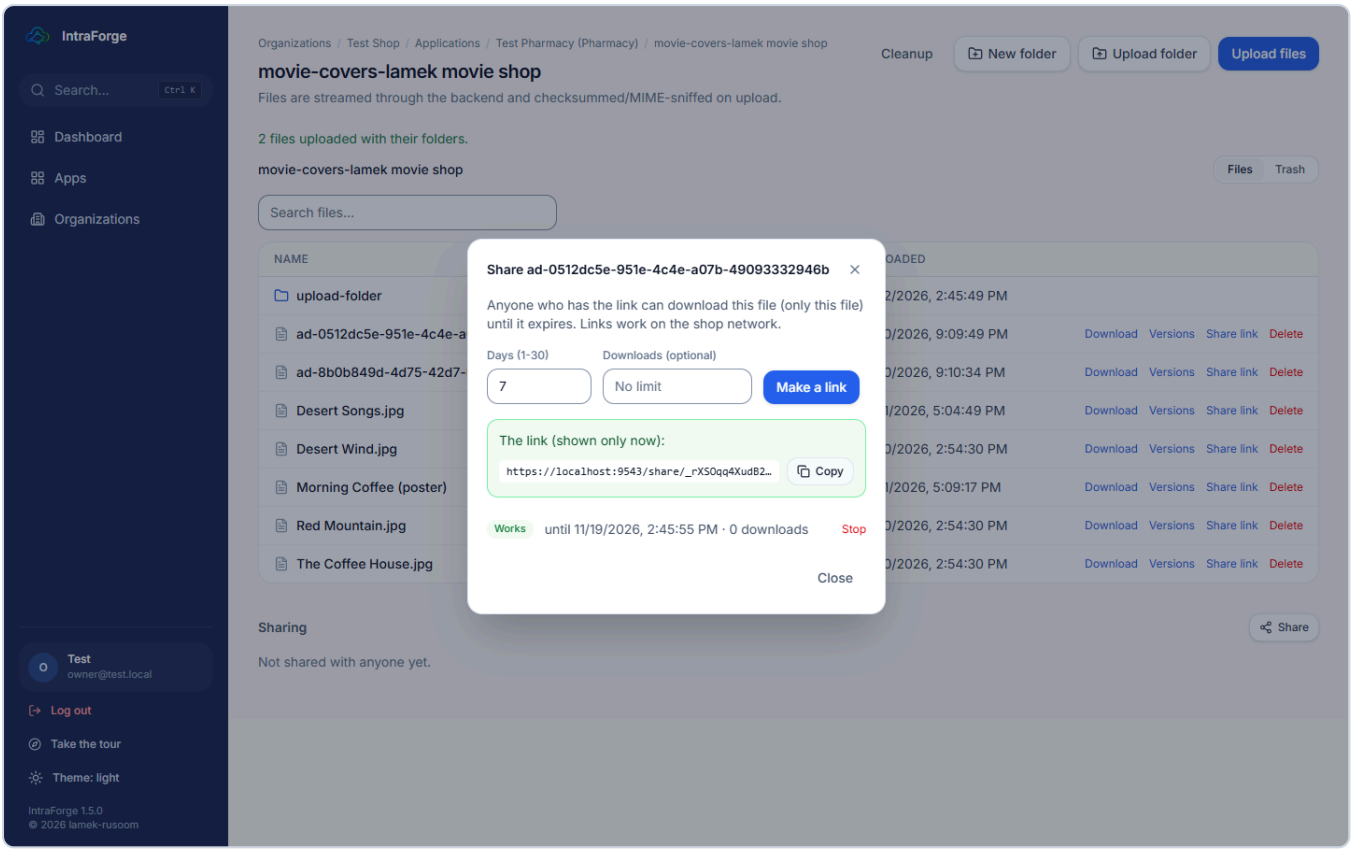

A bucket that **keeps versions** keeps each file's earlier contents when you upload a new version. **Versions** lists them: **Download** an earlier one, or **Restore** it (the current content is kept, so you can go back again).

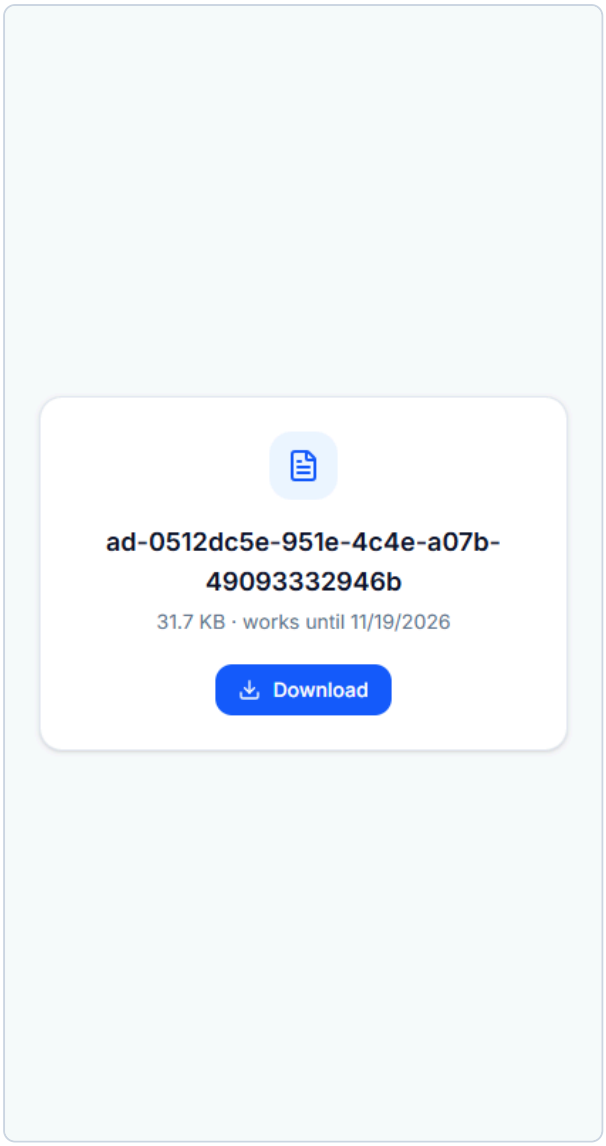

Versions of a file

Share links

Share link makes a link anyone can use to download that one file, for 1 to 30 days, optionally limited to a number of downloads. The link is shown once; **Stop** ends it early.

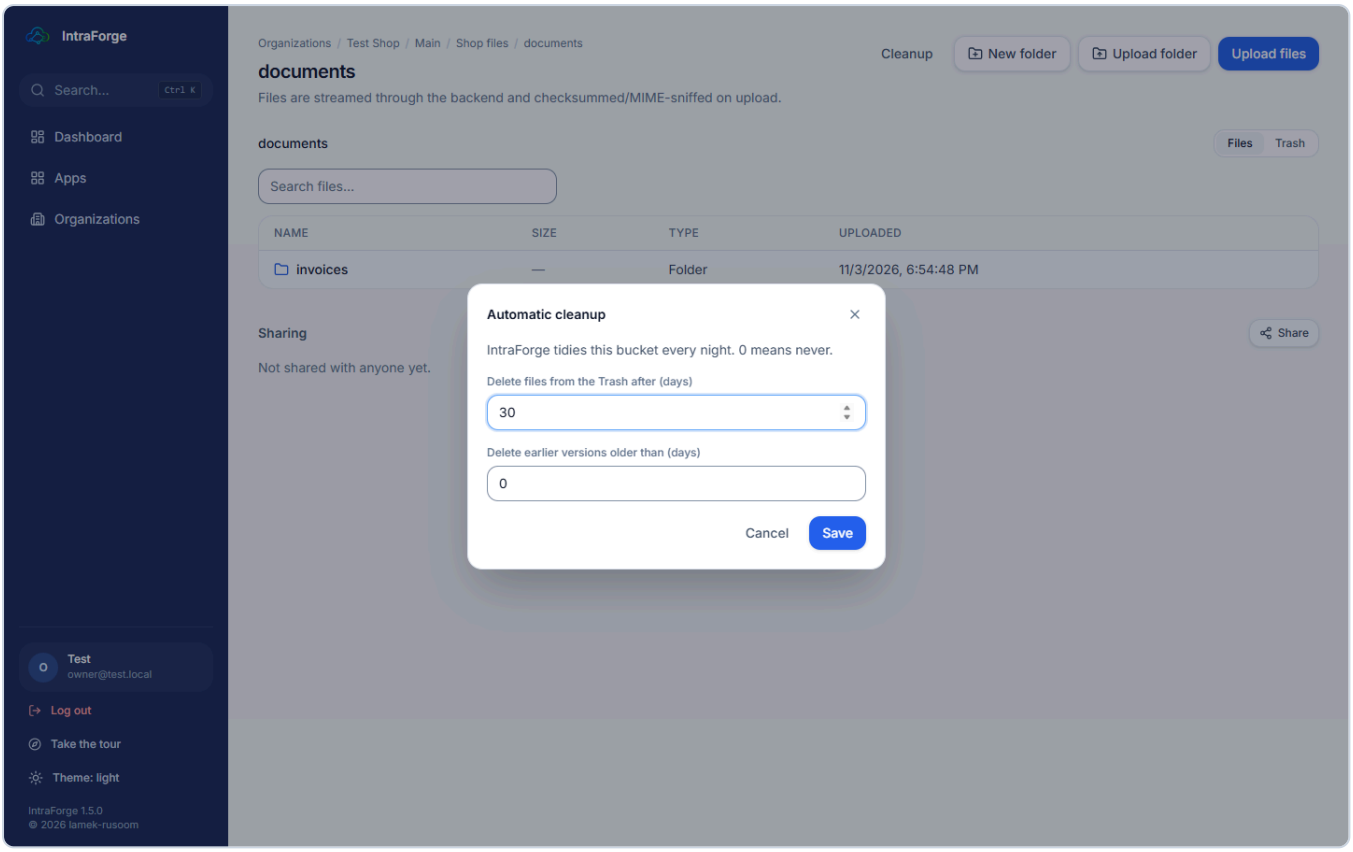

Making a share link

What the person who gets the link sees

Automatic cleanup

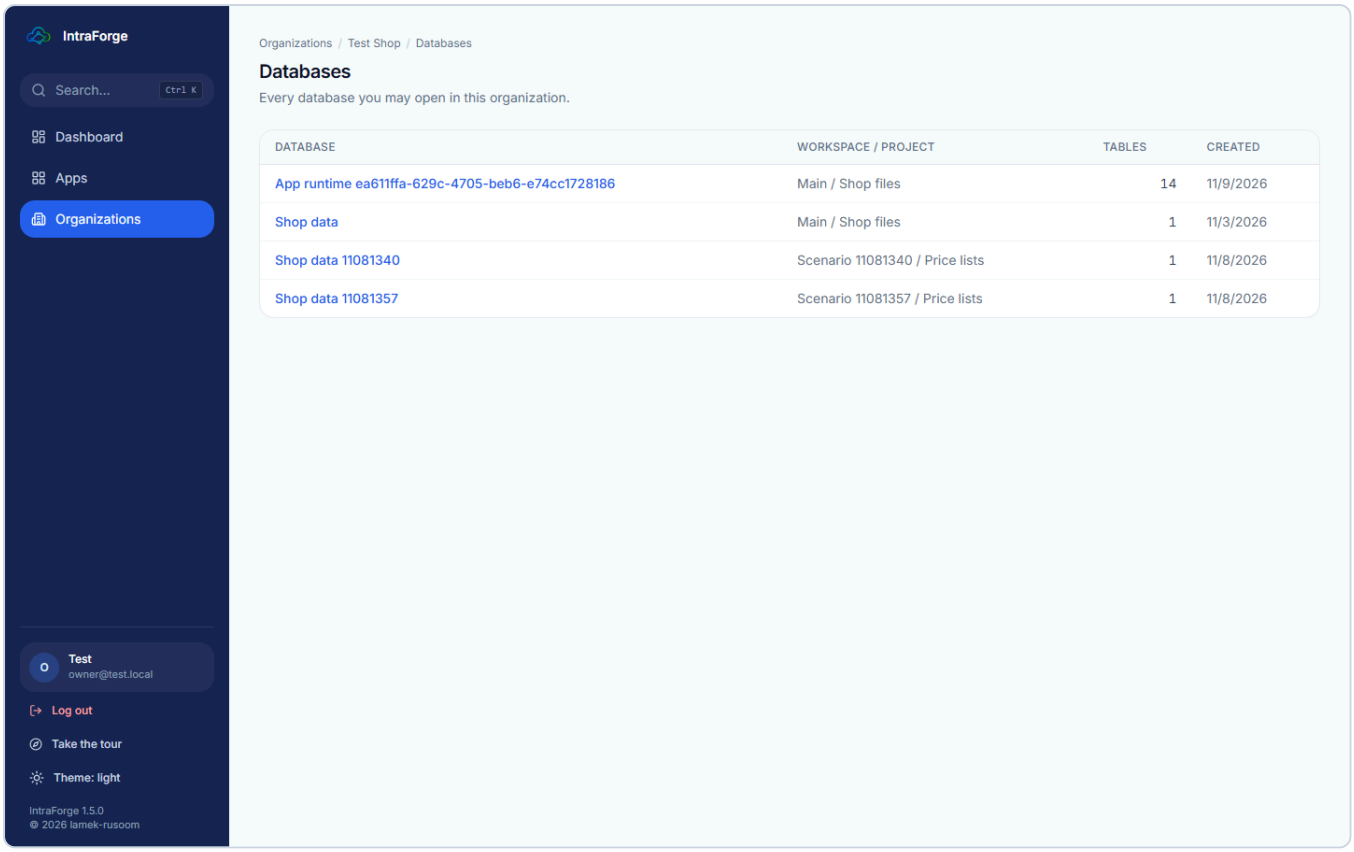

Cleanup sets how many days files stay in the Trash (30 unless changed) and how long earlier versions are kept. IntraForge tidies every night.

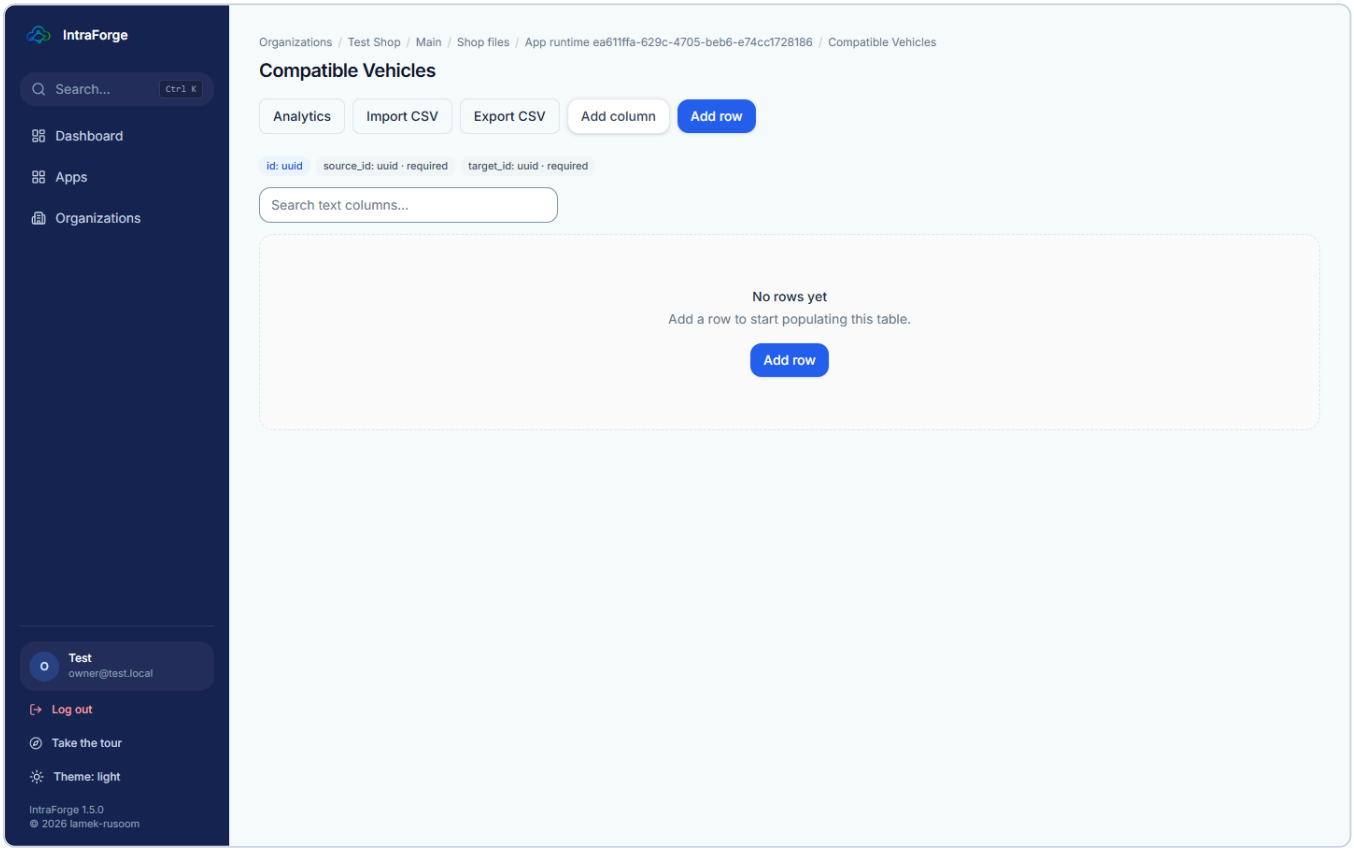

Automatic cleanup

Databases and tables

Organization > Databases lists every database you may open. A database has **tables**; a table is like a spreadsheet whose columns have types (text, number, date...).

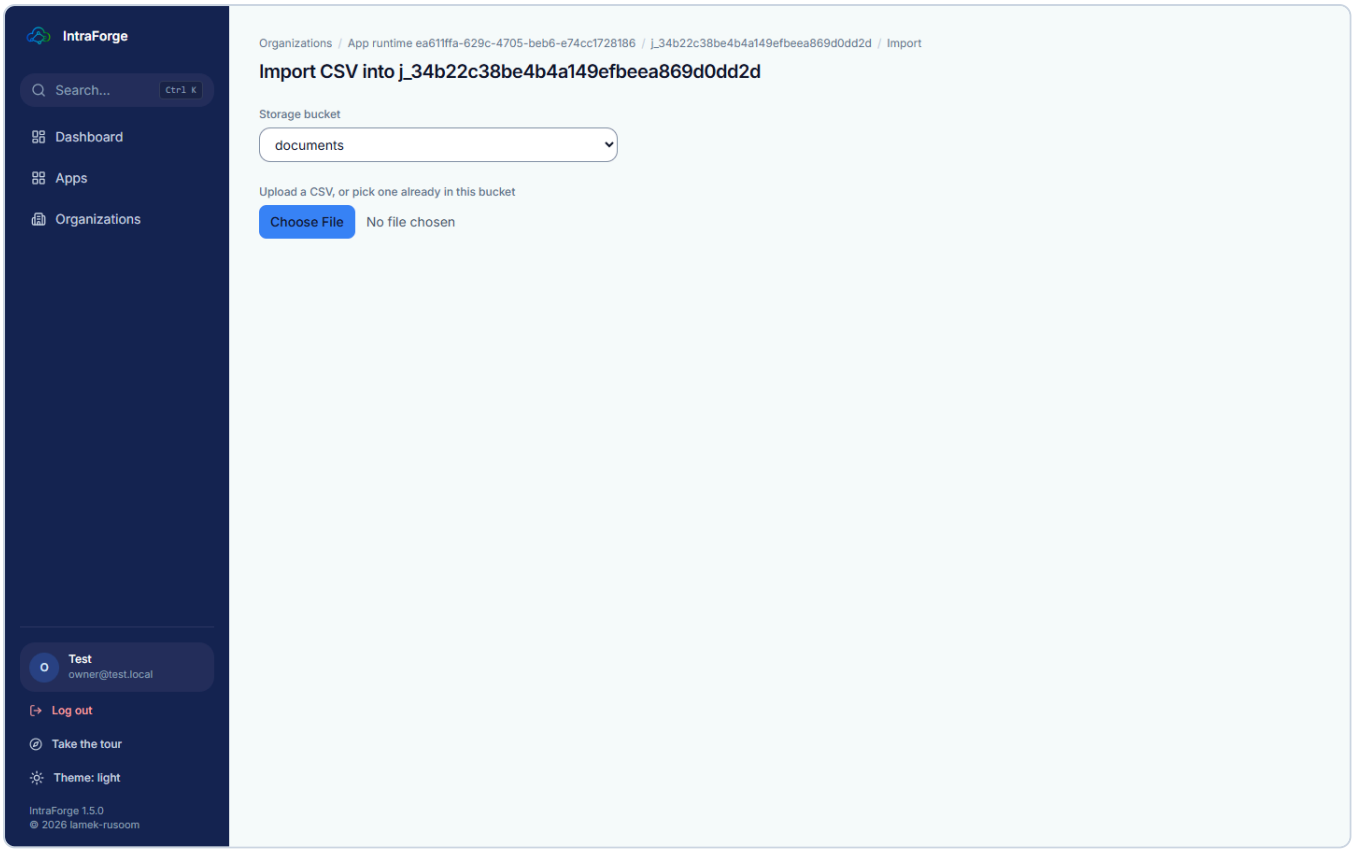

All databases

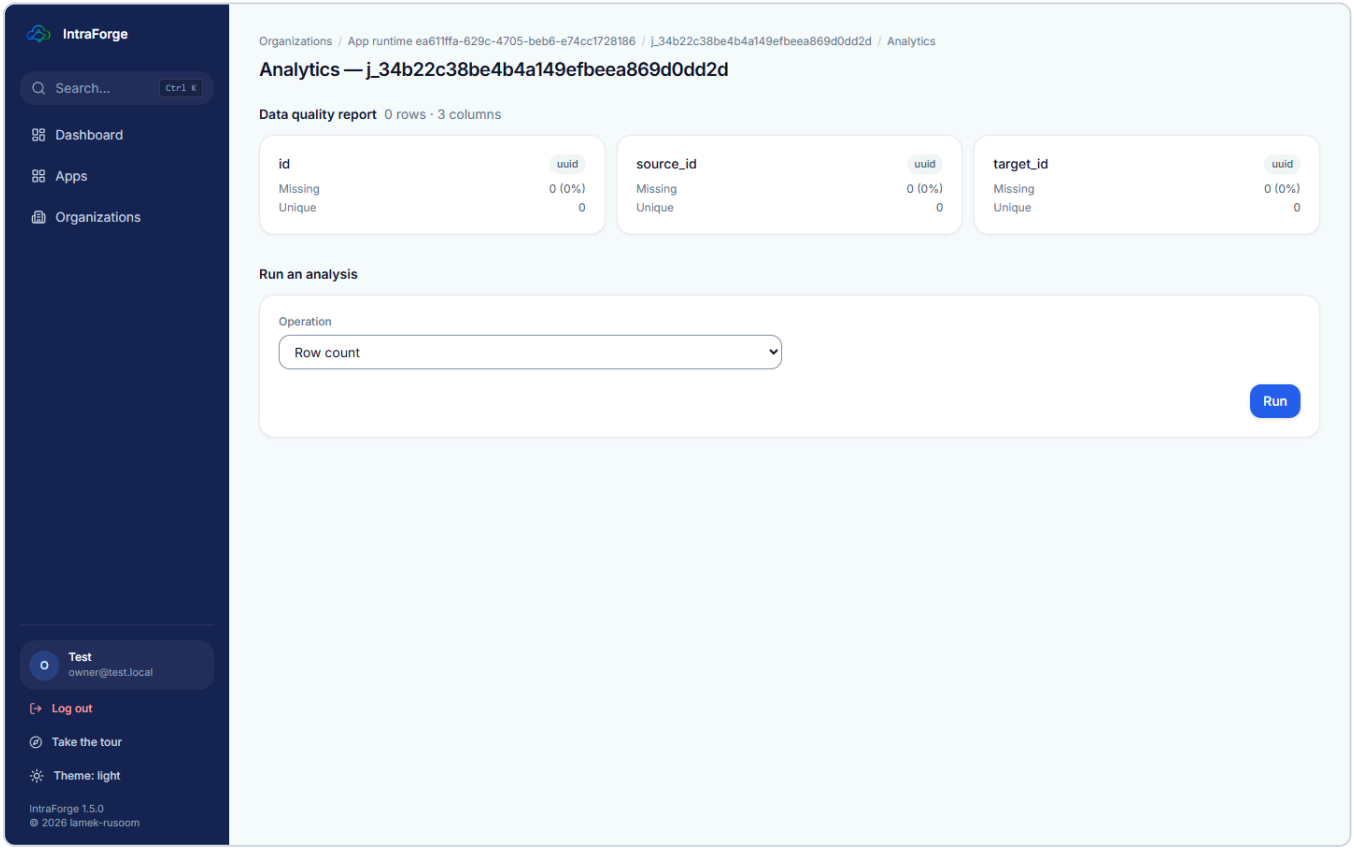

A table's rows

- **Import a CSV file** into a table: upload or pick a stored CSV, check the detected columns, match them to the table's columns, and watch the import finish.

Importing a CSV file

- **Analytics** profiles each column (empty values, ranges) and runs statistics (averages, correlation, trends).

Analytics on a table

Connected databases (PostgreSQL, MySQL, SQL Server)

A project can **connect** to another database the shop already has (for example an old point-of-sale system) and read its tables live, without copying them: **Project > Connect a database**, choose the **database type**, then the address, database name, a user and password. Use a database user that may only **read**.

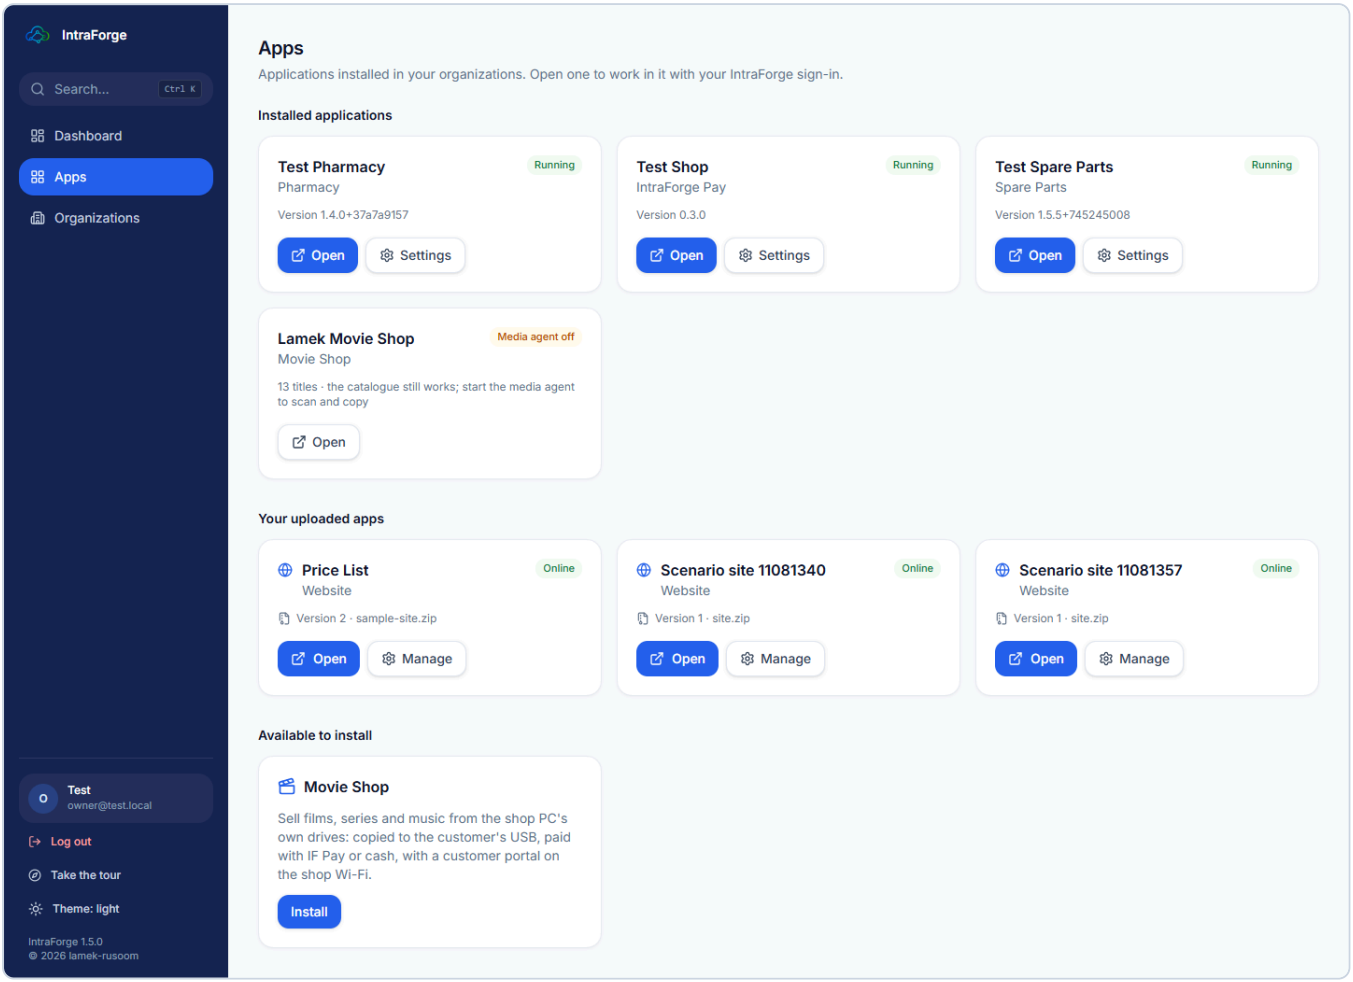

Exercise 3

1. Upload a folder with two files in it. 2. Upload a new version of one file and restore the old one. 3. Make a share

link for one day and open it in a private browser window. 4. Delete a file and restore it from the Trash.

Lesson 4 — Spare Parts and Pharmacy

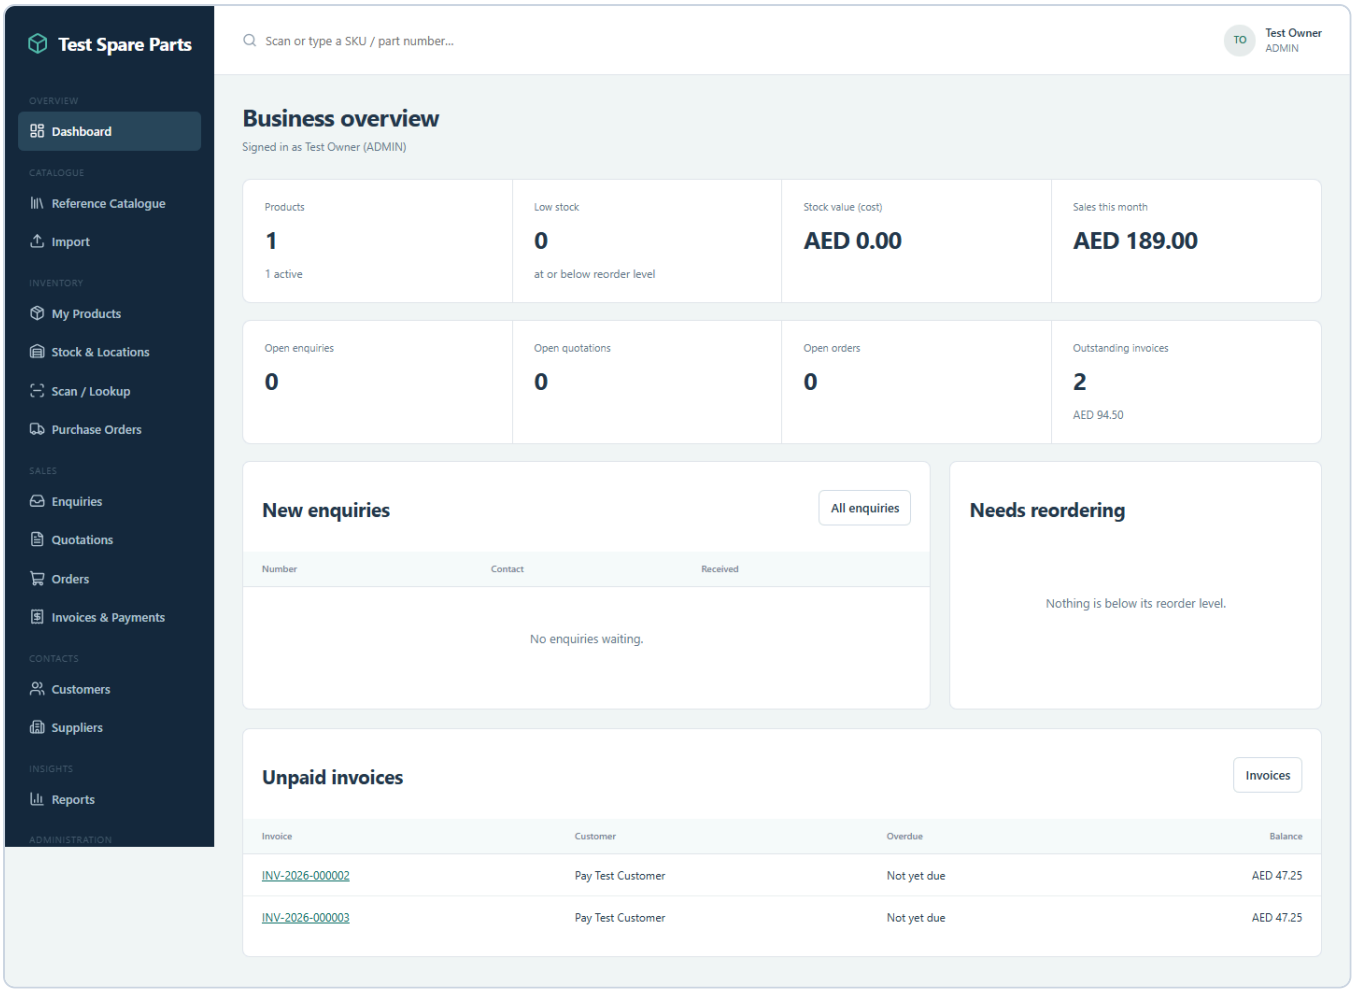

Spare Parts is the shop's stock and sales application; **Pharmacy** is the same application set up for medicines (generic name, strength, prescription flag, expiry). Open it from **Apps > Open** — you are signed in with your IntraForge account, no second password.

The Apps page: open Spare Parts, Pharmacy, Pay or the Movie Shop

The dashboard

The **Business overview** shows products, low stock, stock value, sales this month, open enquiries, quotations, orders and unpaid invoices.

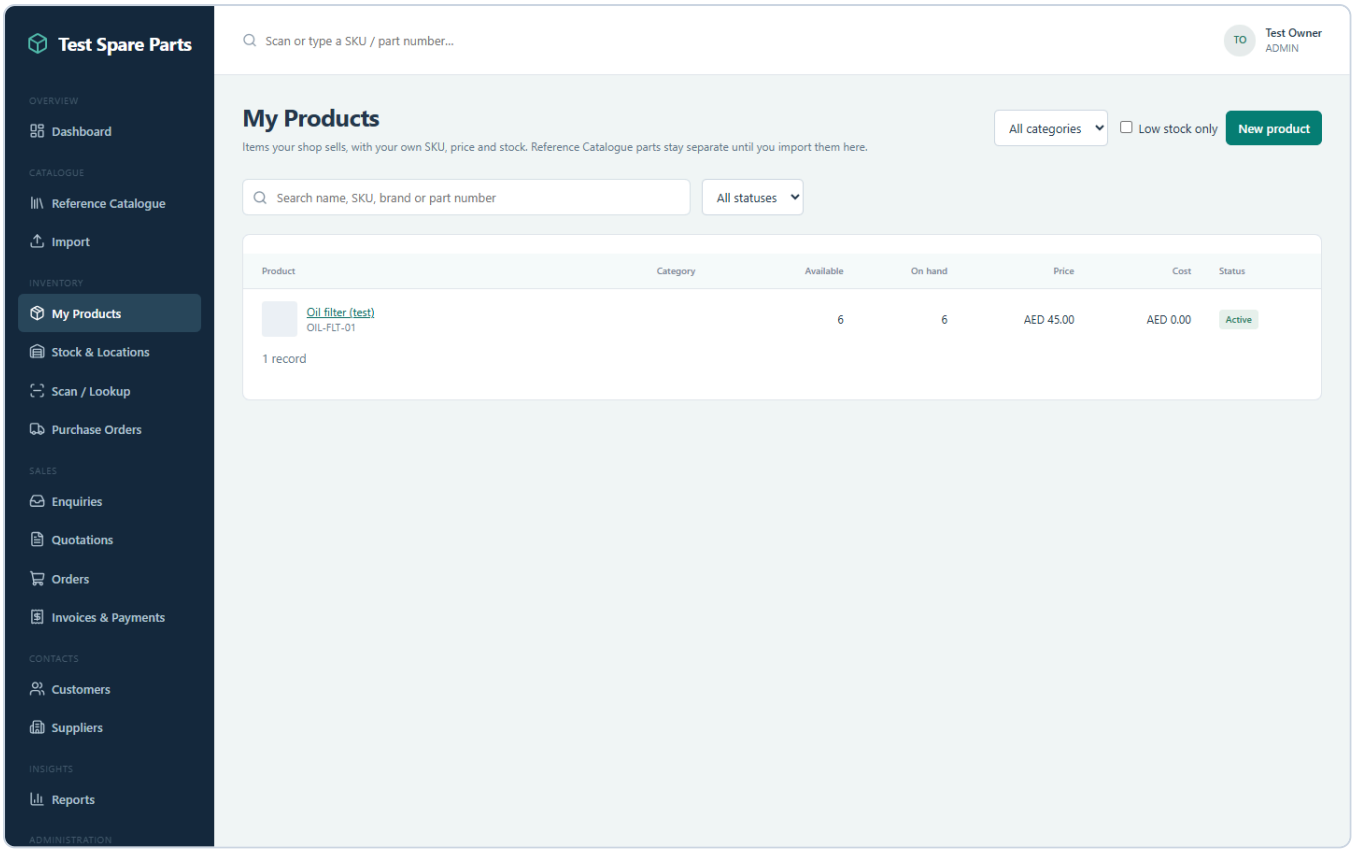

The Spare Parts dashboard

The menu on the left: **Reference Catalogue**, **Import**, **My Products**, **Stock & Locations**, **Scan / Lookup**, **Purchase Orders**, **Enquiries**, **Quotations**, **Orders**, **Invoices & Payments**, **Customers**, **Suppliers**, **Reports** and **Administration**.

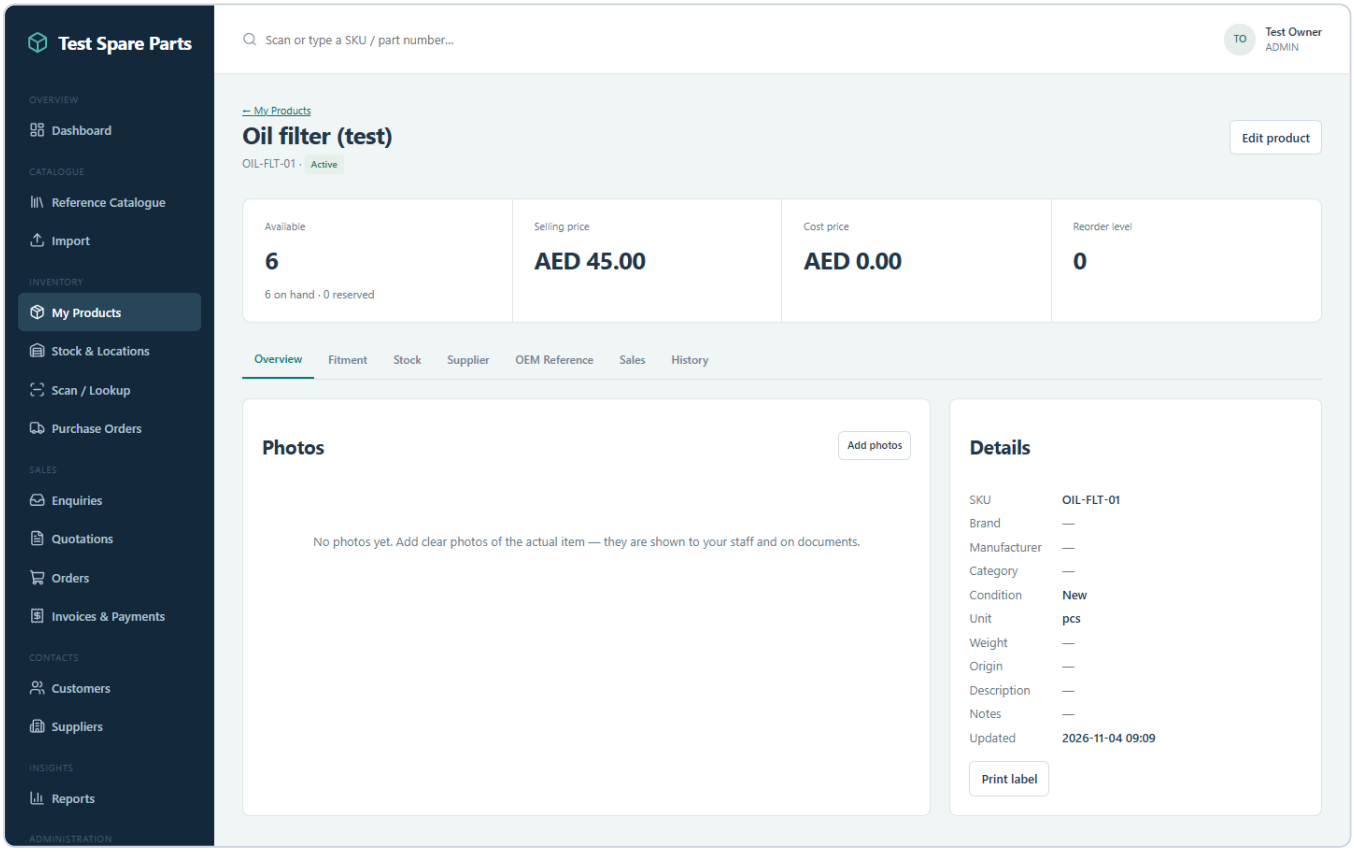

Products

My Products lists what the shop sells: name, part number (SKU), stock and price.

My Products

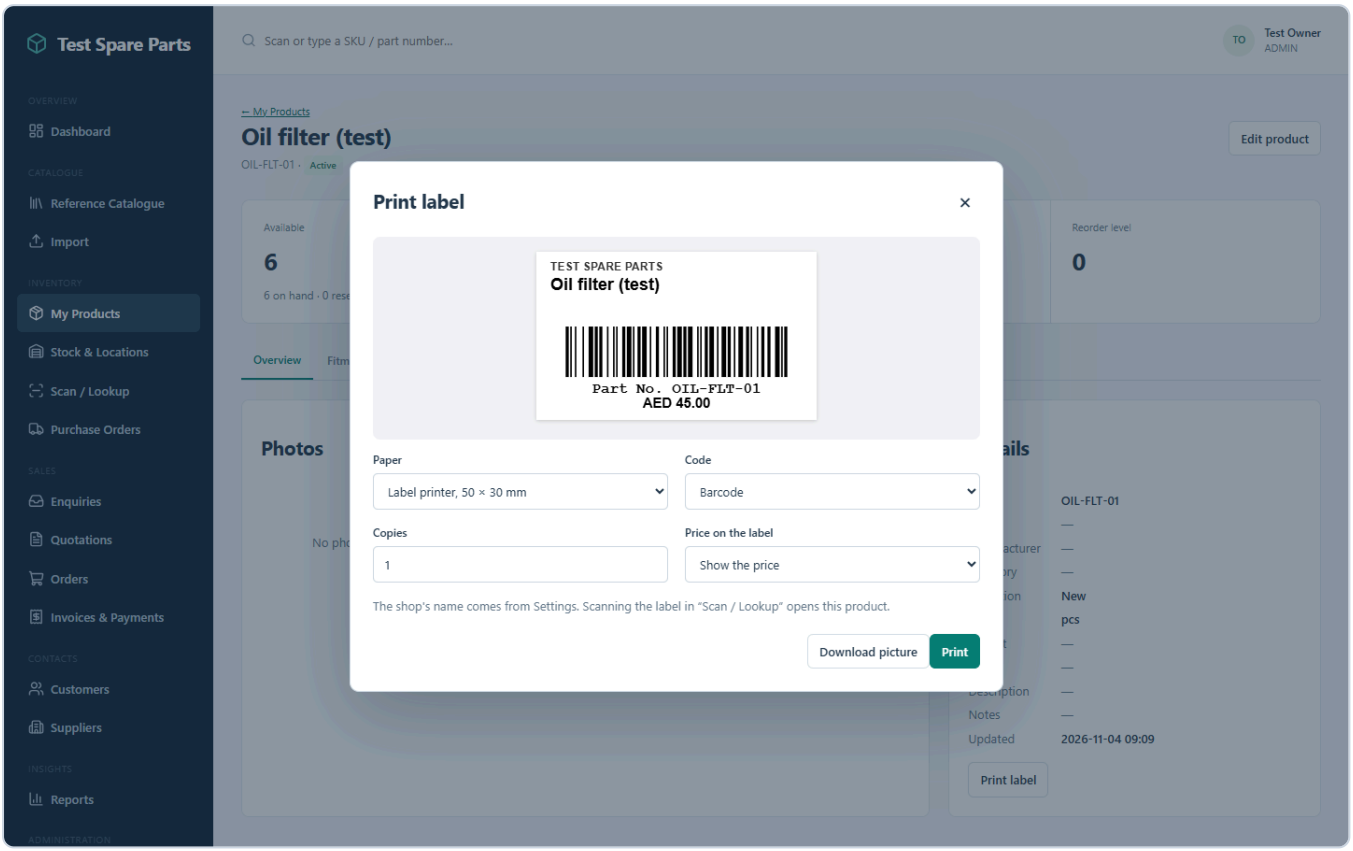

Open a product to see its stock, photos, details and history.

A product

Printing a label

On a product press **Print label**. Choose the **paper** (label printer 50 × 30 mm, or an A4 sheet of 24 labels), **barcode or QR code**, the number of **copies** and whether to show the **price**. The label shows the shop's name, the product and its part number. **Print** opens a page sized for the paper; **Download picture** saves PNG files.

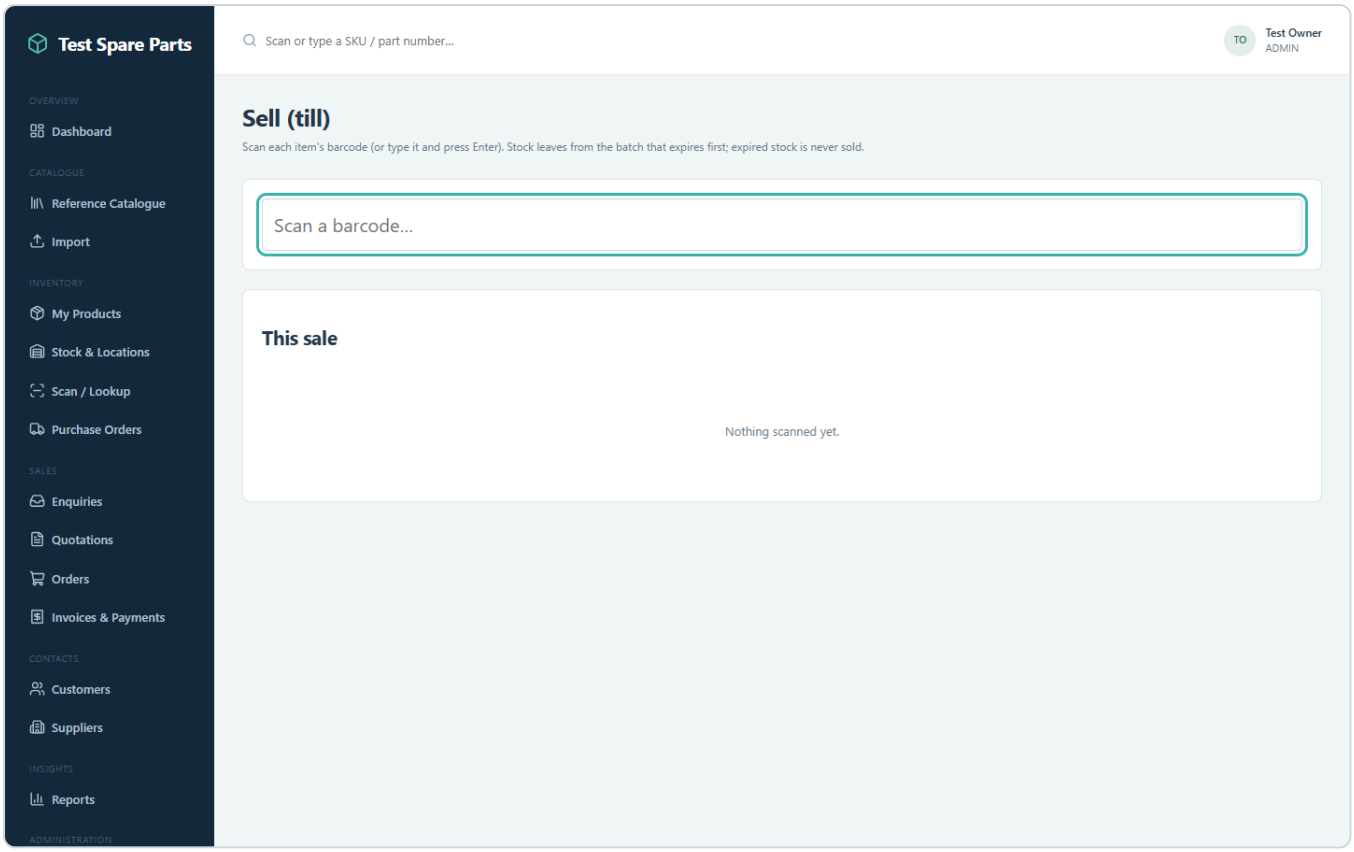

The label dialog

> The shop's name on the label comes from **Administration > Settings**.

Selling

1. Open **Sell** (or scan a product's label in **Scan / Lookup**).
2. Add the products and quantities; choose the customer if they have an account.
3. Take the payment (cash, or an **IntraForge Pay** QR code the customer scans with the wallet app).
4. The invoice is created and the stock goes down — once, even if two people sell at the same time.

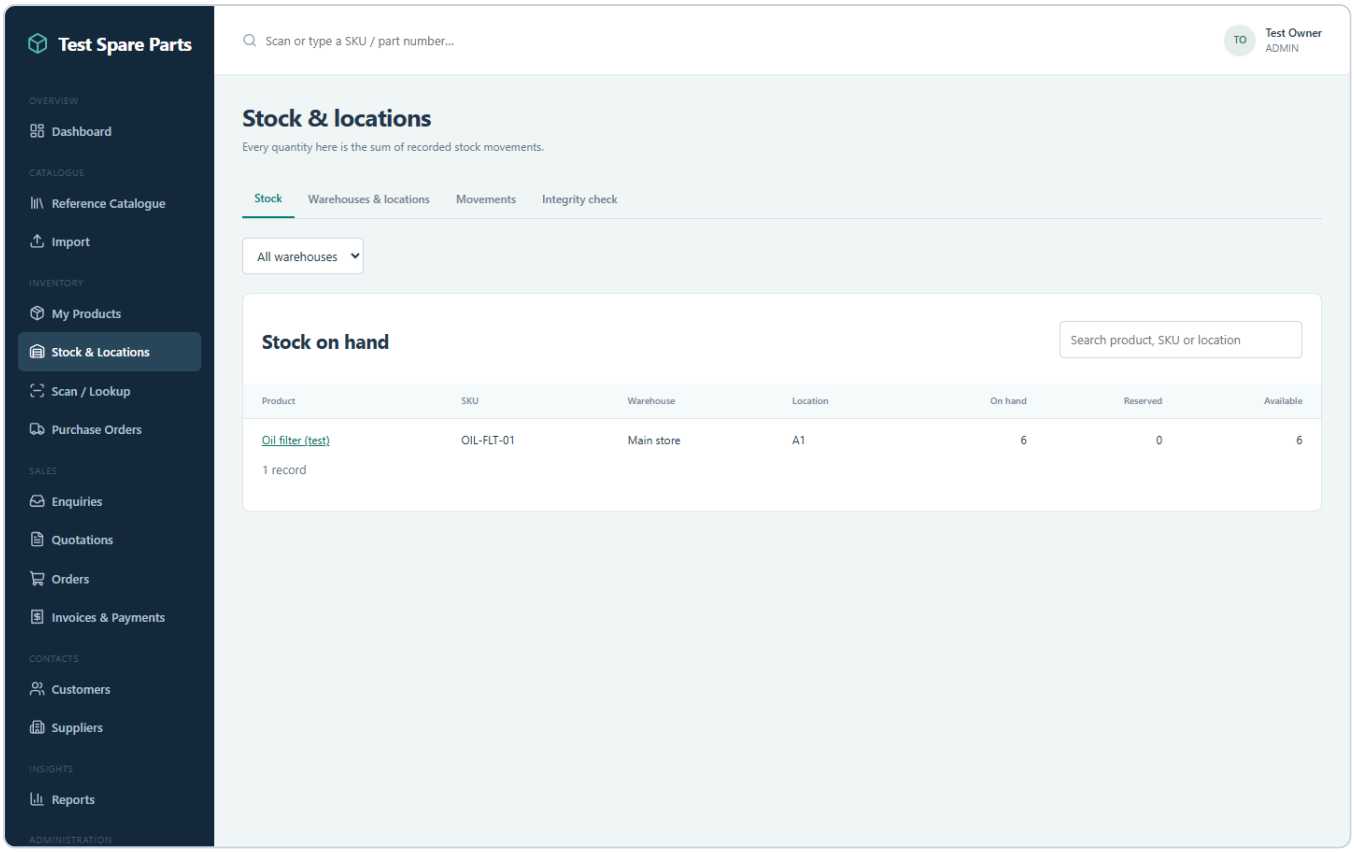

Selling

> **Careful:** the right to sell is not the right to receive or adjust stock. Each is a separate permission the owner gives; if a button is missing for you, ask the owner for that role.

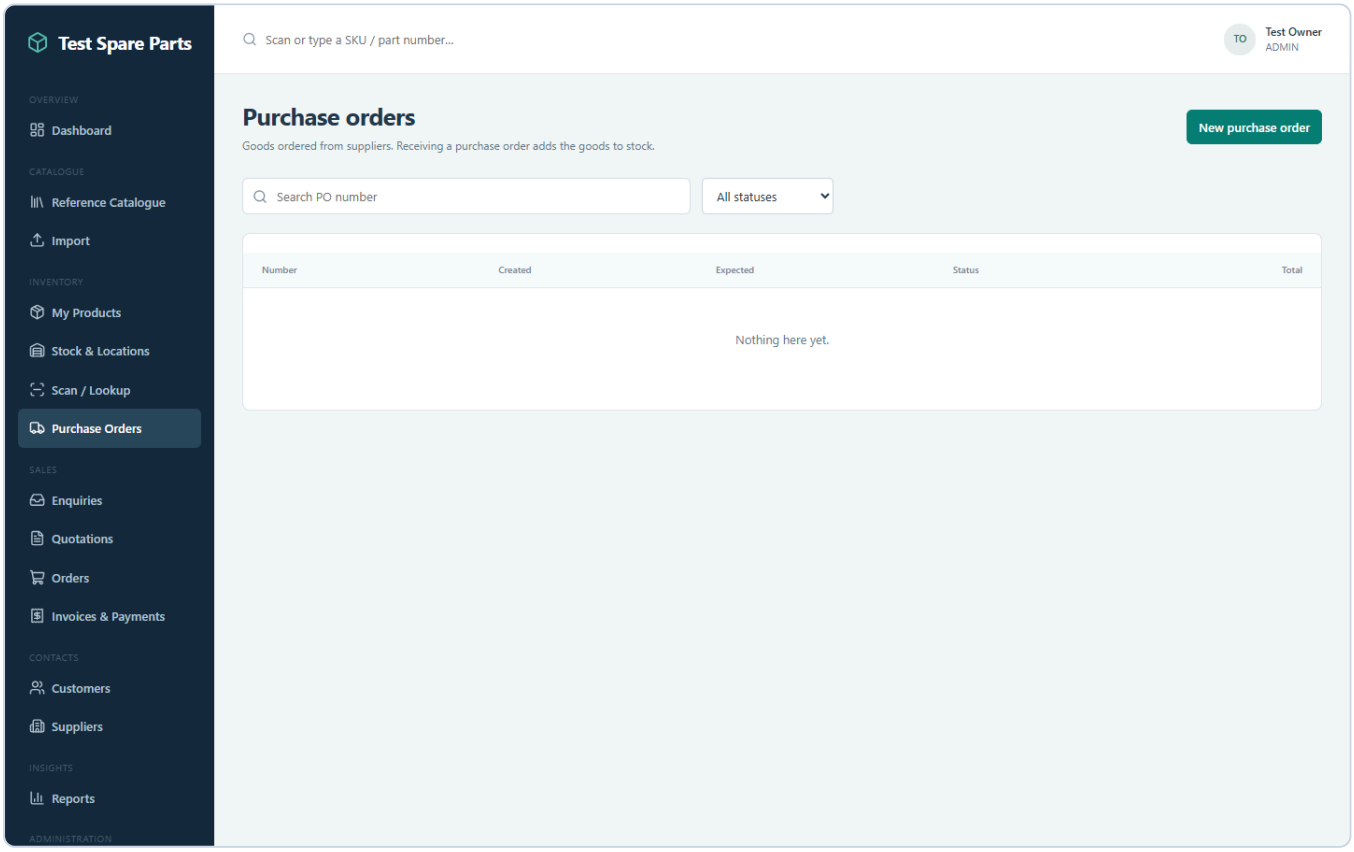

Stock, receiving and purchasing

- **Stock & Locations** shows how many of each product are on hand and where.

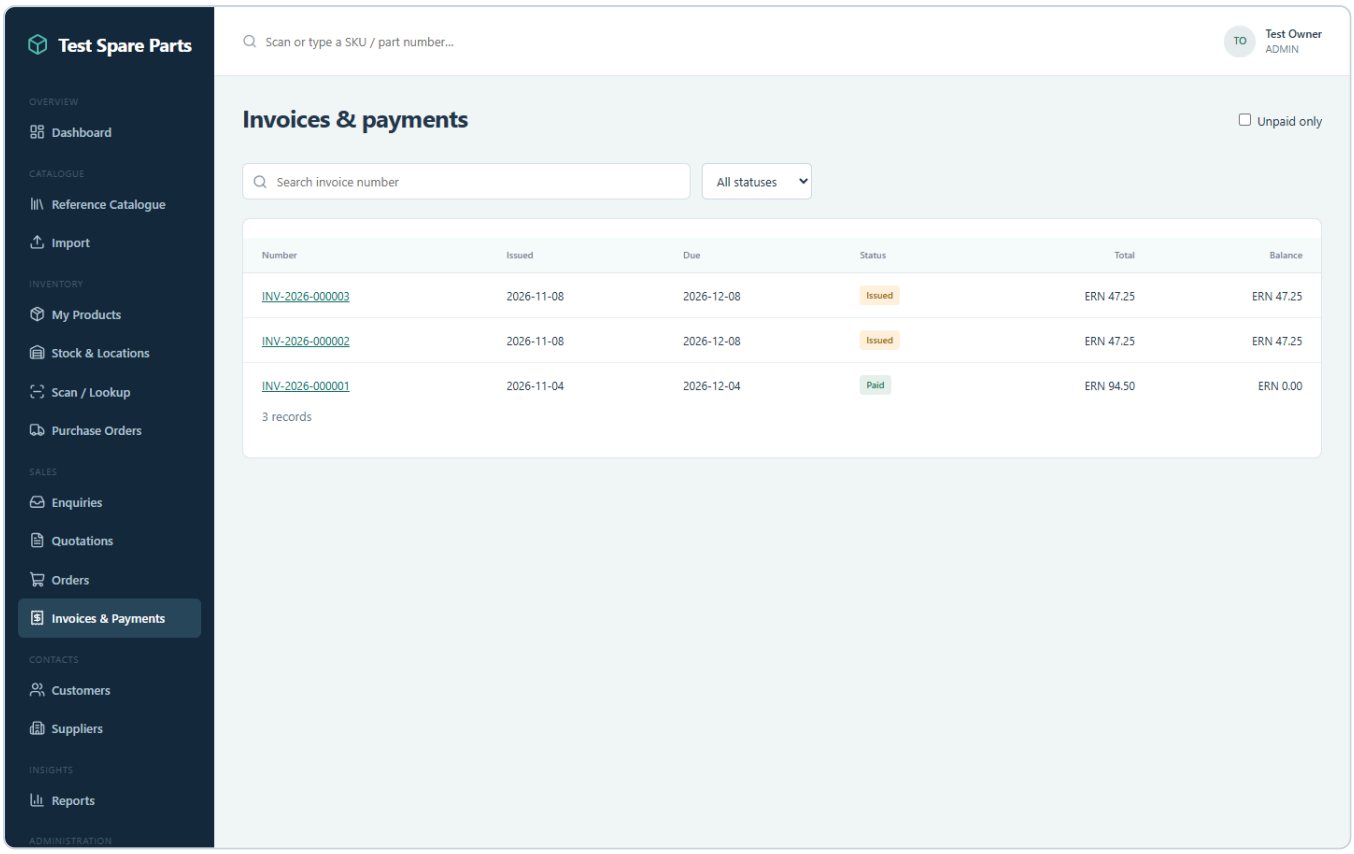

Stock & Locations

- **Purchase Orders**: order from a supplier, then **receive** the goods — the stock goes up.

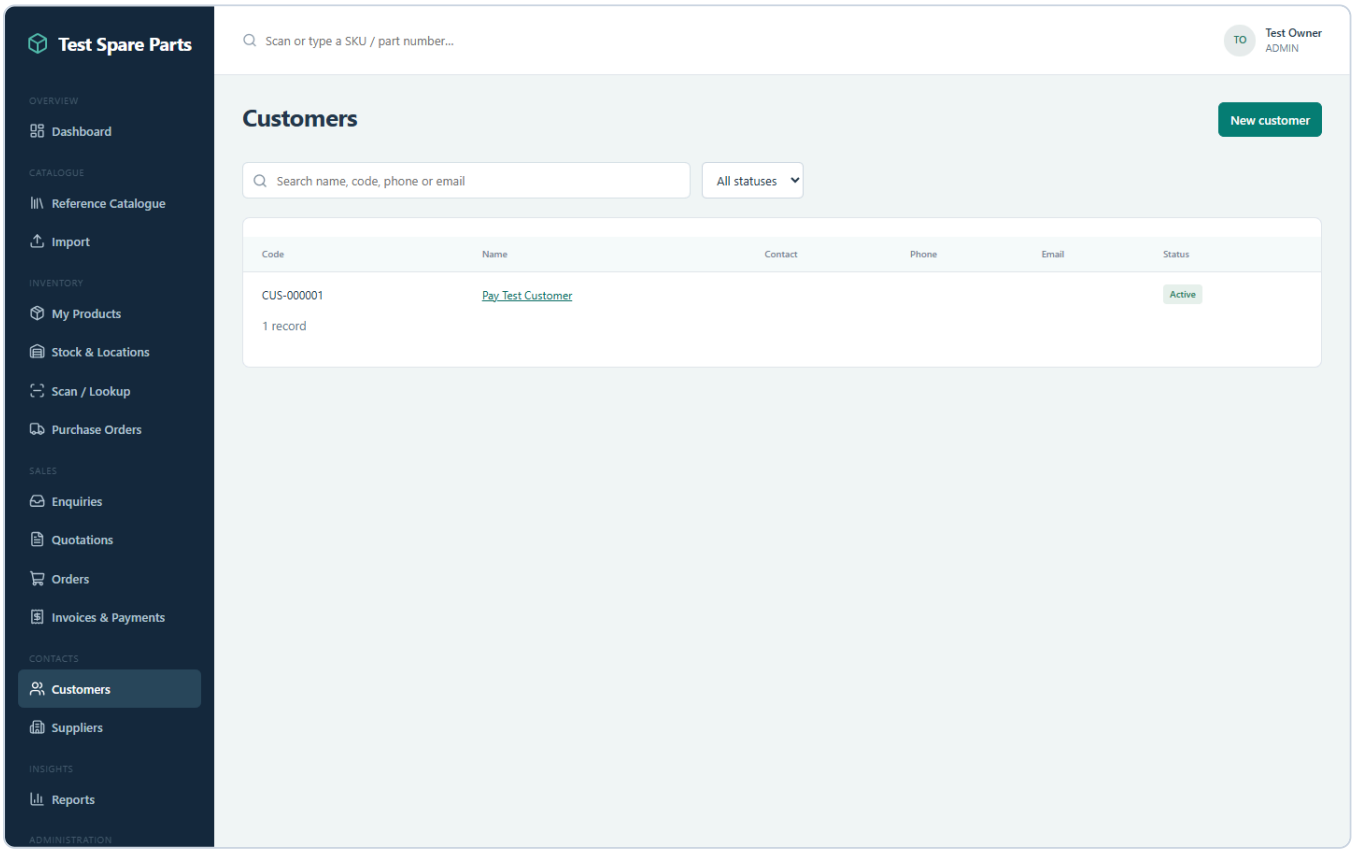

Purchase orders

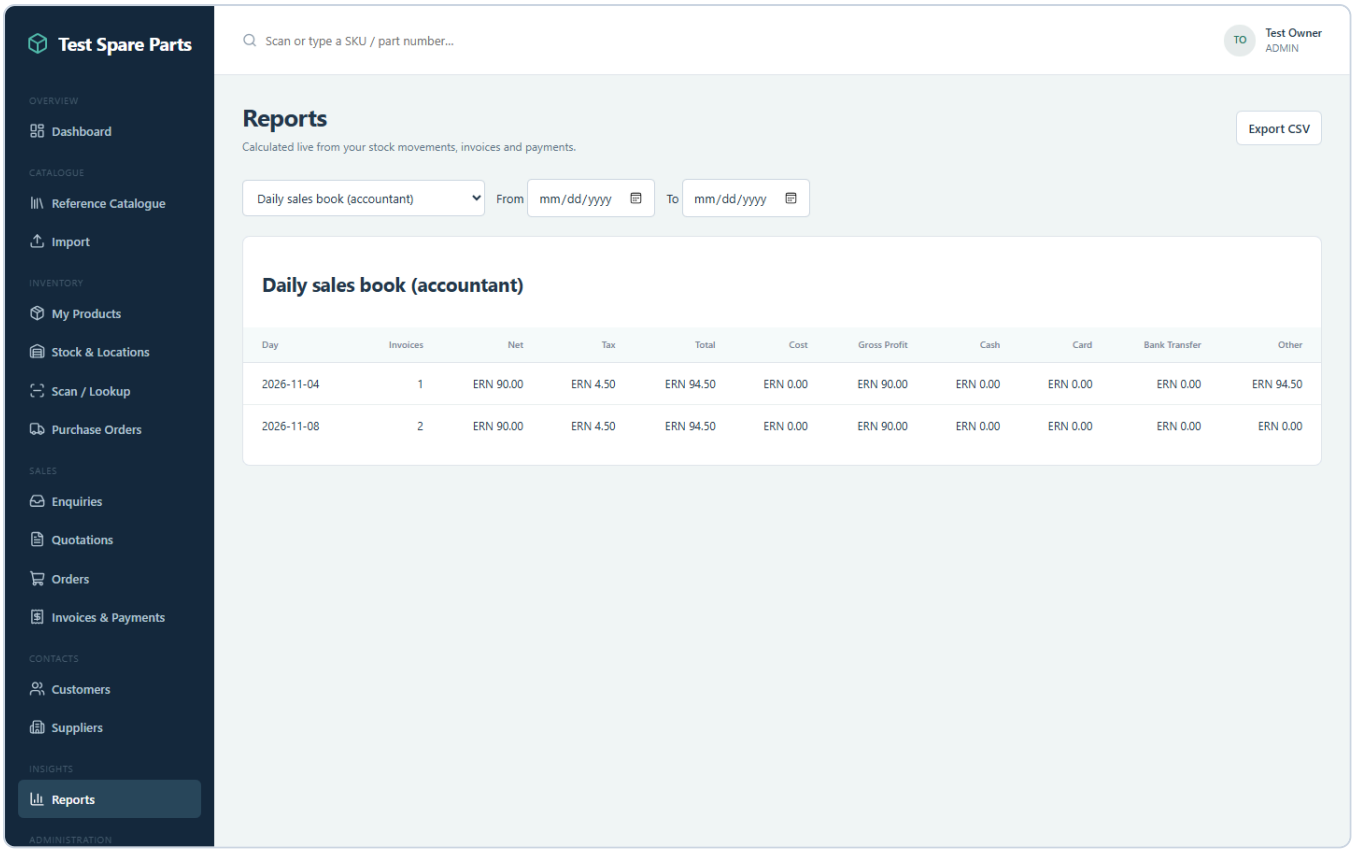

Invoices, customers, reports

Invoices & Payments

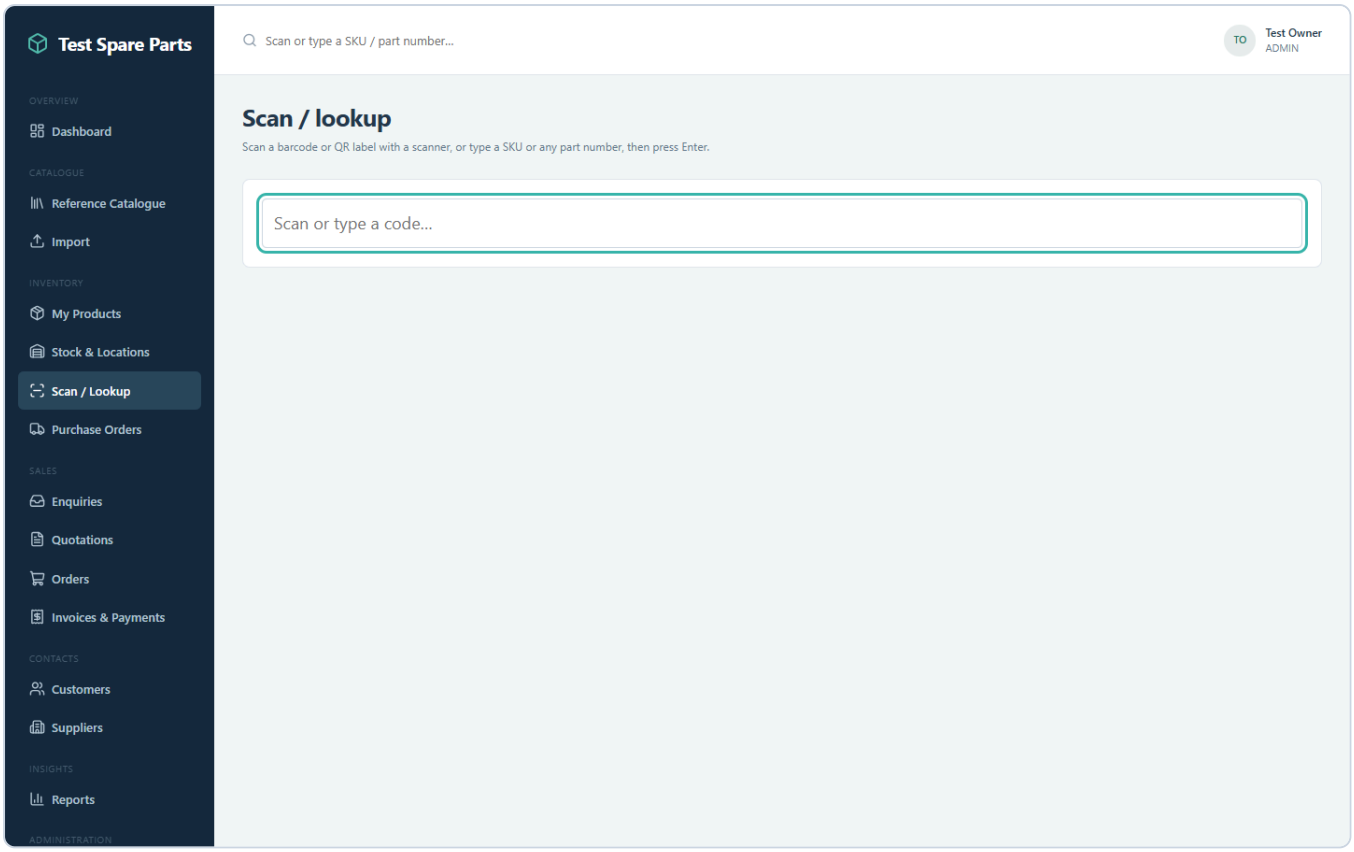

Customers

Reports

Scan, catalogue and administration

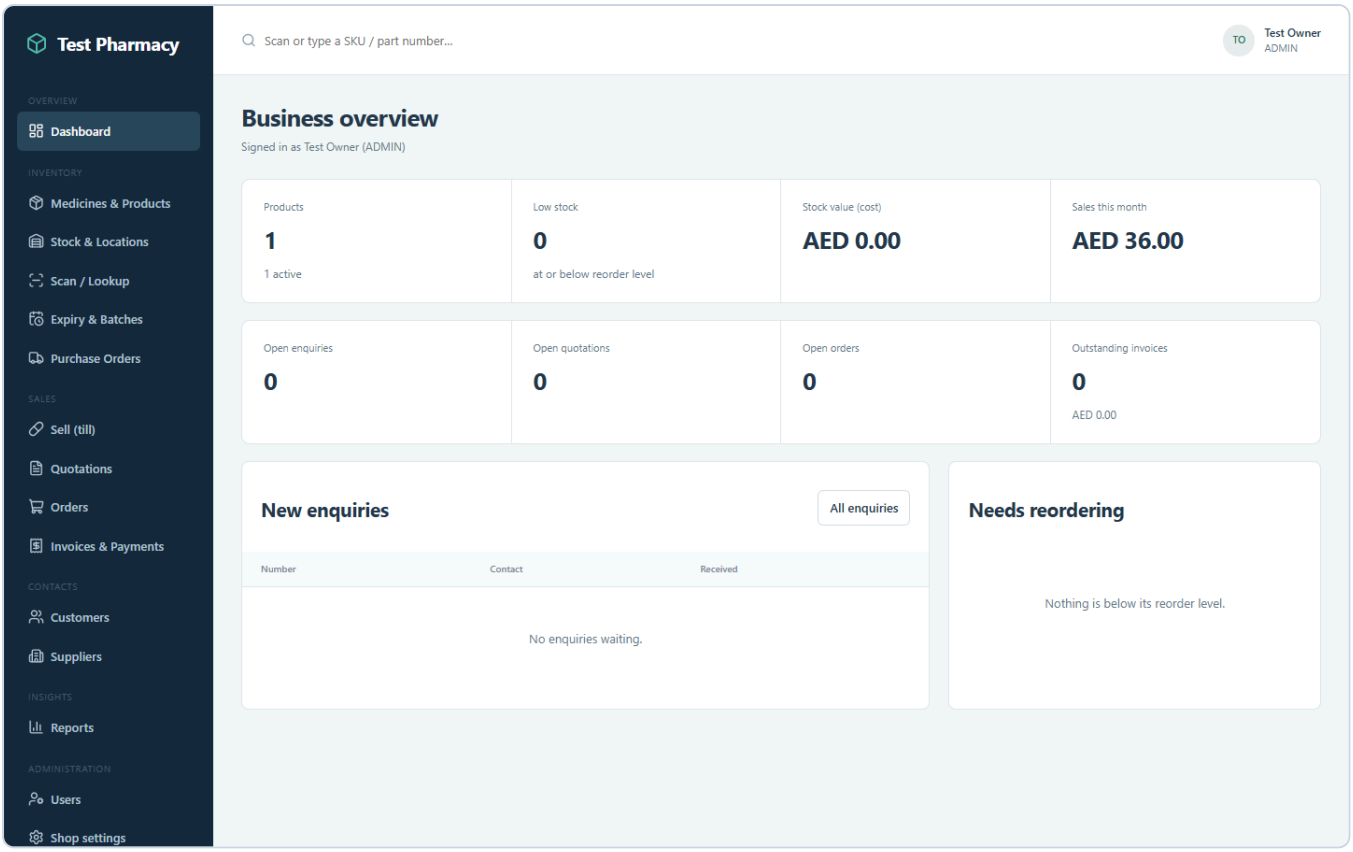

- **Scan / Lookup**: scan a barcode or QR label (or type a part number) to open the product at once.
- **Reference Catalogue**: look up parts in an imported catalogue and add them to your products.
- **Administration**: the shop's settings (name, currency, tax) and its users' roles in this app.

Scan / Lookup

Pharmacy

The Pharmacy works the same way. A medicine has a generic name, strength and form, a **prescription** flag (its label shows **Rx**), a shelf location and expiry dates; **Expiry** lists what expires soon.

The Pharmacy dashboard

Exercise 4

1. Add a product with a part number and a price. 2. Print its label on the A4 sheet. 3. Receive 10 through a purchase

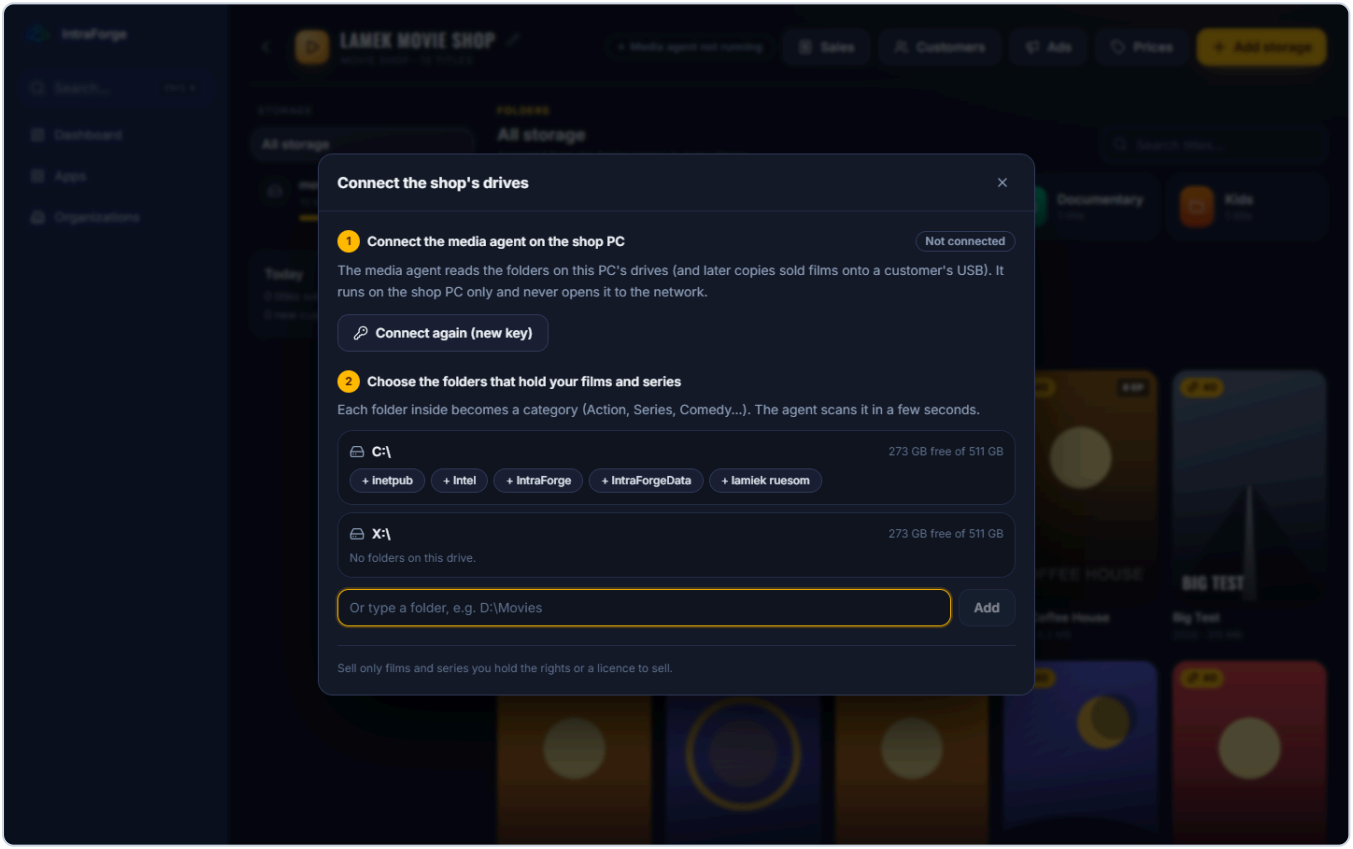

order. 4. Sell 2 to a customer and find the invoice. 5. Check the stock shows 8.

Lesson 5 — The Movie Shop and its customer portal

The **Movie Shop** turns the films, series and music on the shop PC's own drives into a catalogue, sells them for IF Pay or cash, and copies them onto the customer's USB drive. Customers can also browse and order from their own phones on the shop's Wi-Fi.

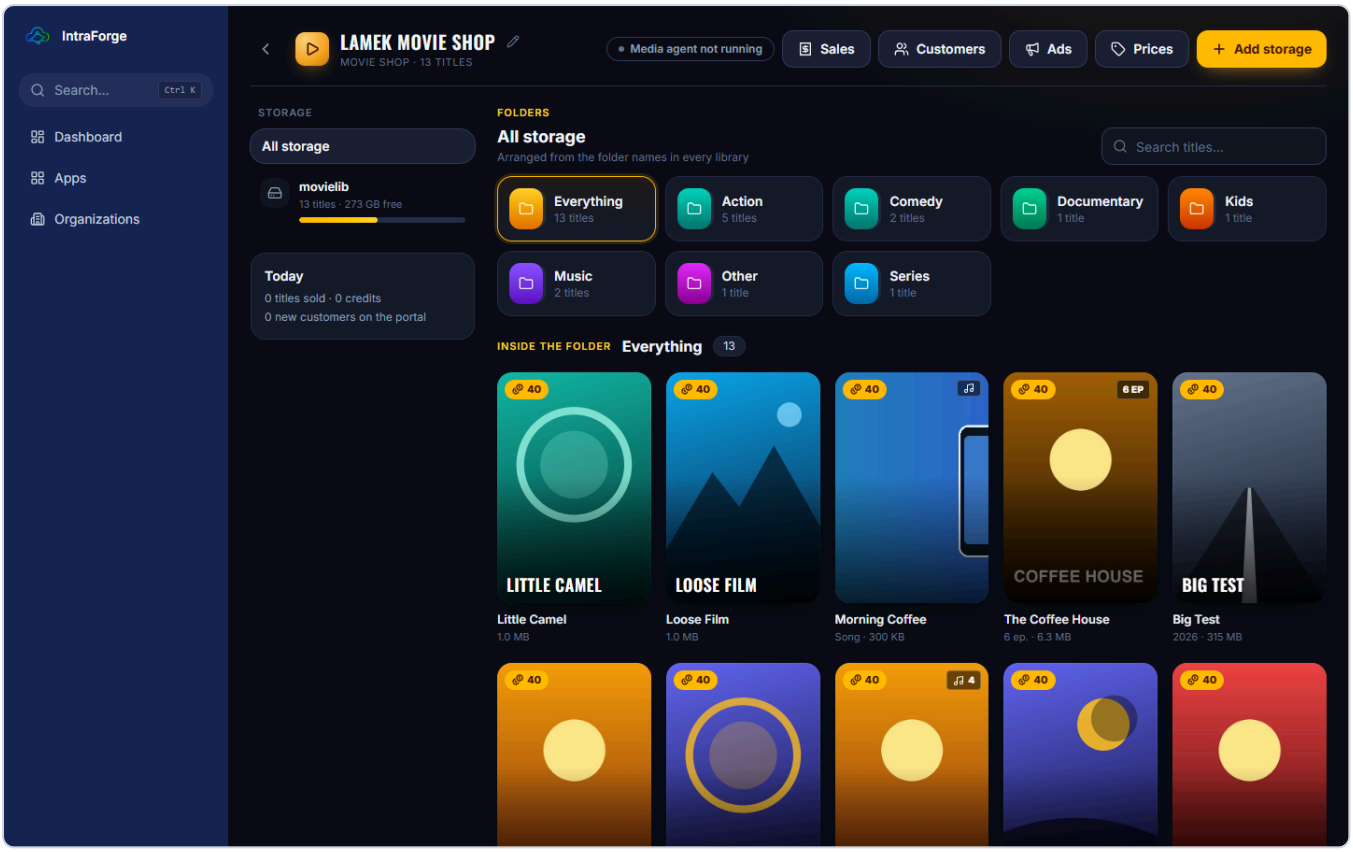

Setting up (the owner, once)

1. **Apps > Available to install > Movie Shop > Install**; the shop appears under Installed applications.
2. On the shop PC, run the **media agent** once (**Add storage** shows the steps and a pairing key). The agent reads the drives and copies the files; IntraForge never moves your files.
3. **Add storage**: choose the folders that hold the films (for example `D:\Movies`). Every folder inside becomes a category; every video, song or album becomes a title, with its cover when a picture sits beside it.

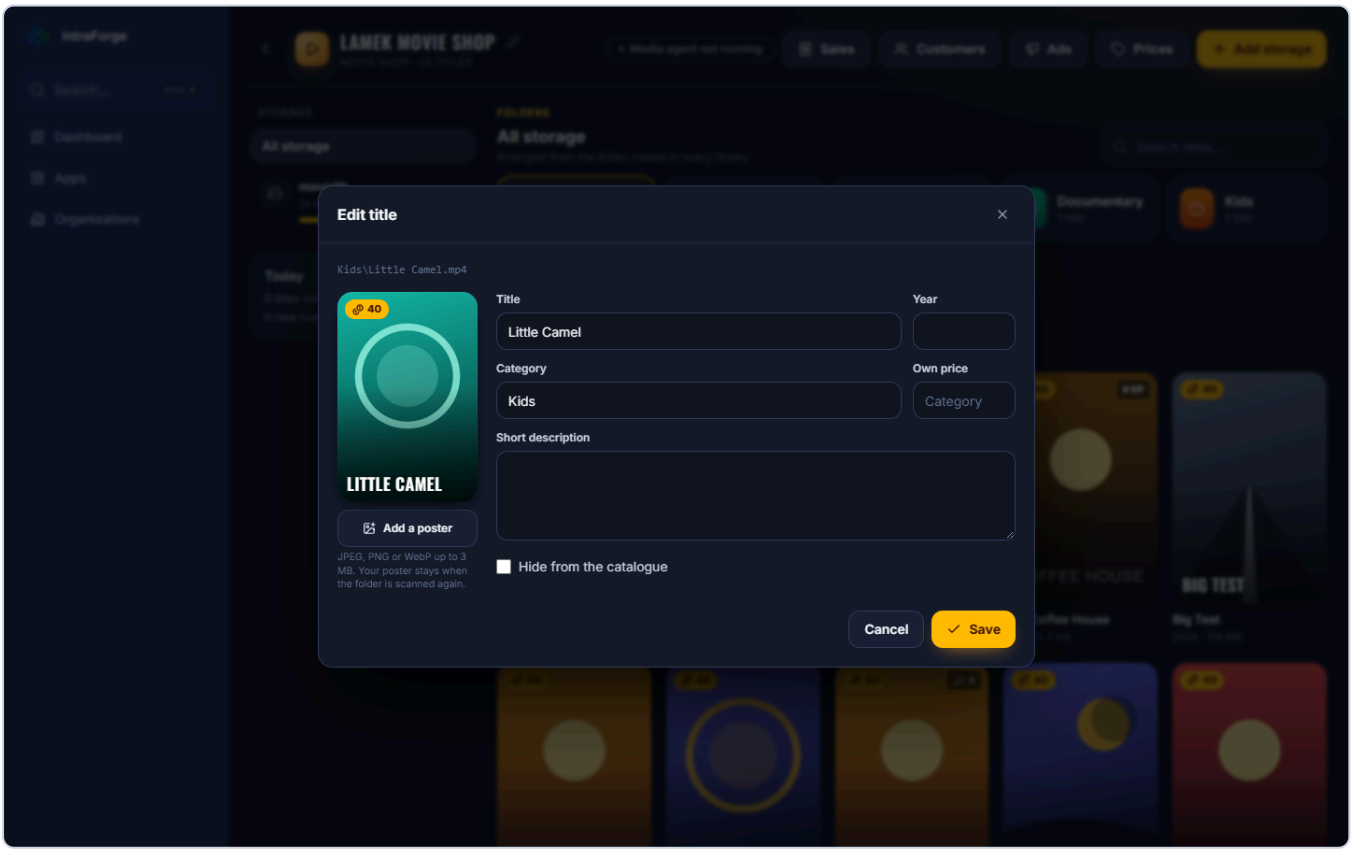

Adding storage

The catalogue

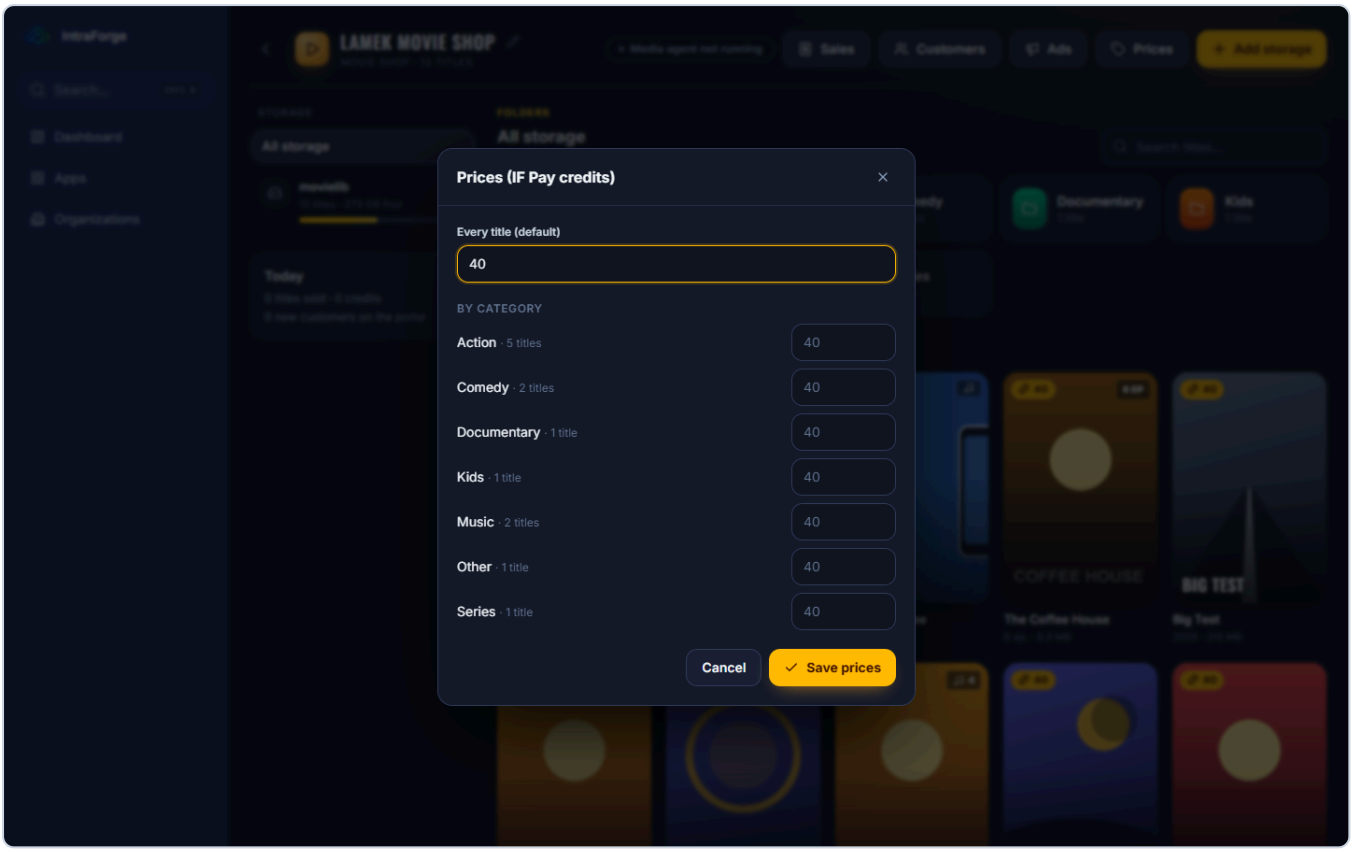

The Movie Shop catalogue

- **Storage** on the left (each drive, its free space) and the **Today** card (titles sold, credits, new customers).
- **Folders** across the top; click one to see its titles below. **Search titles** finds a title by name.
- Hover a poster: **Edit** (name, year, category, own price, hide, **Change poster**) and **Add** to the cart.

Editing a title and its poster

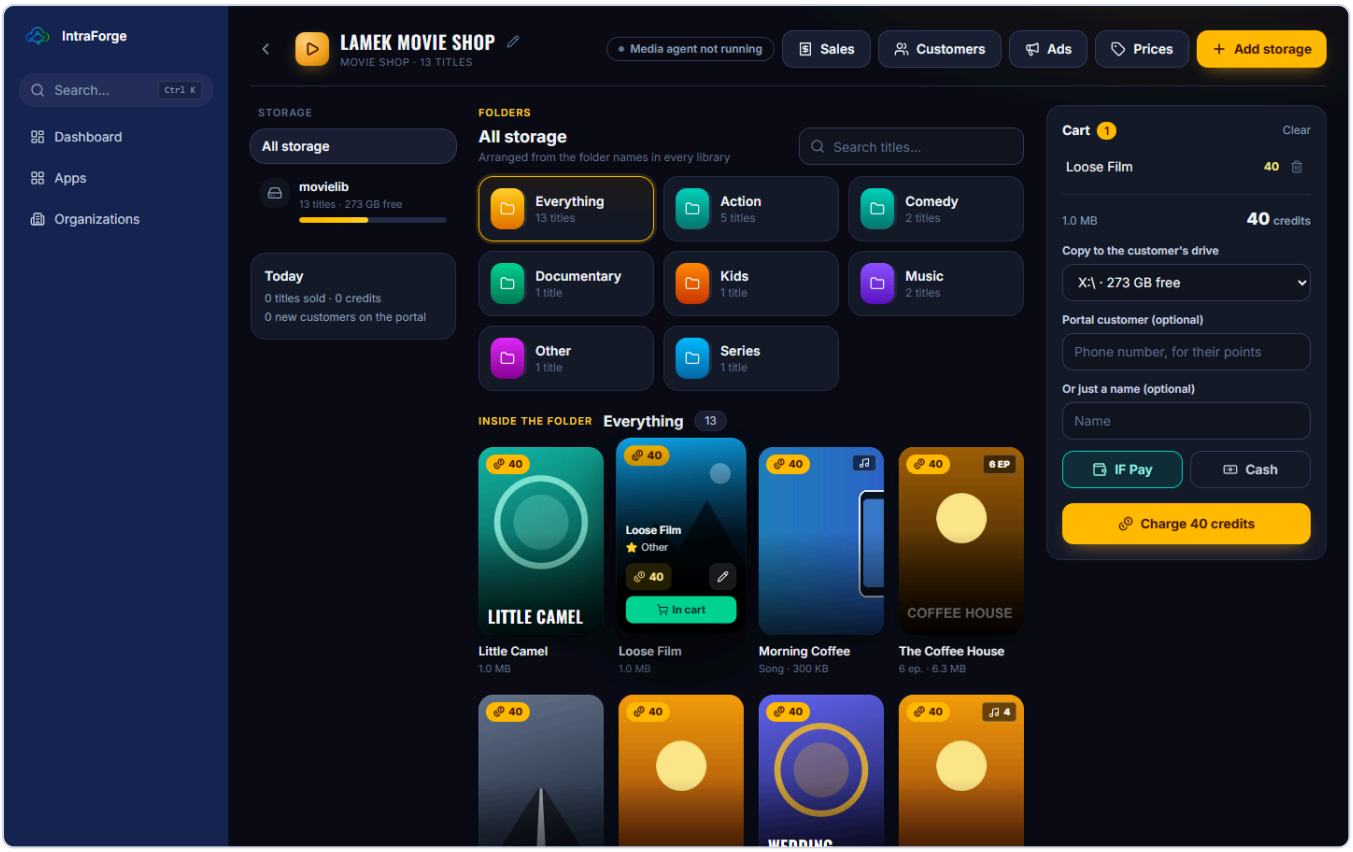

- **Prices** sets one price for everything and one per category; a title can have its own.

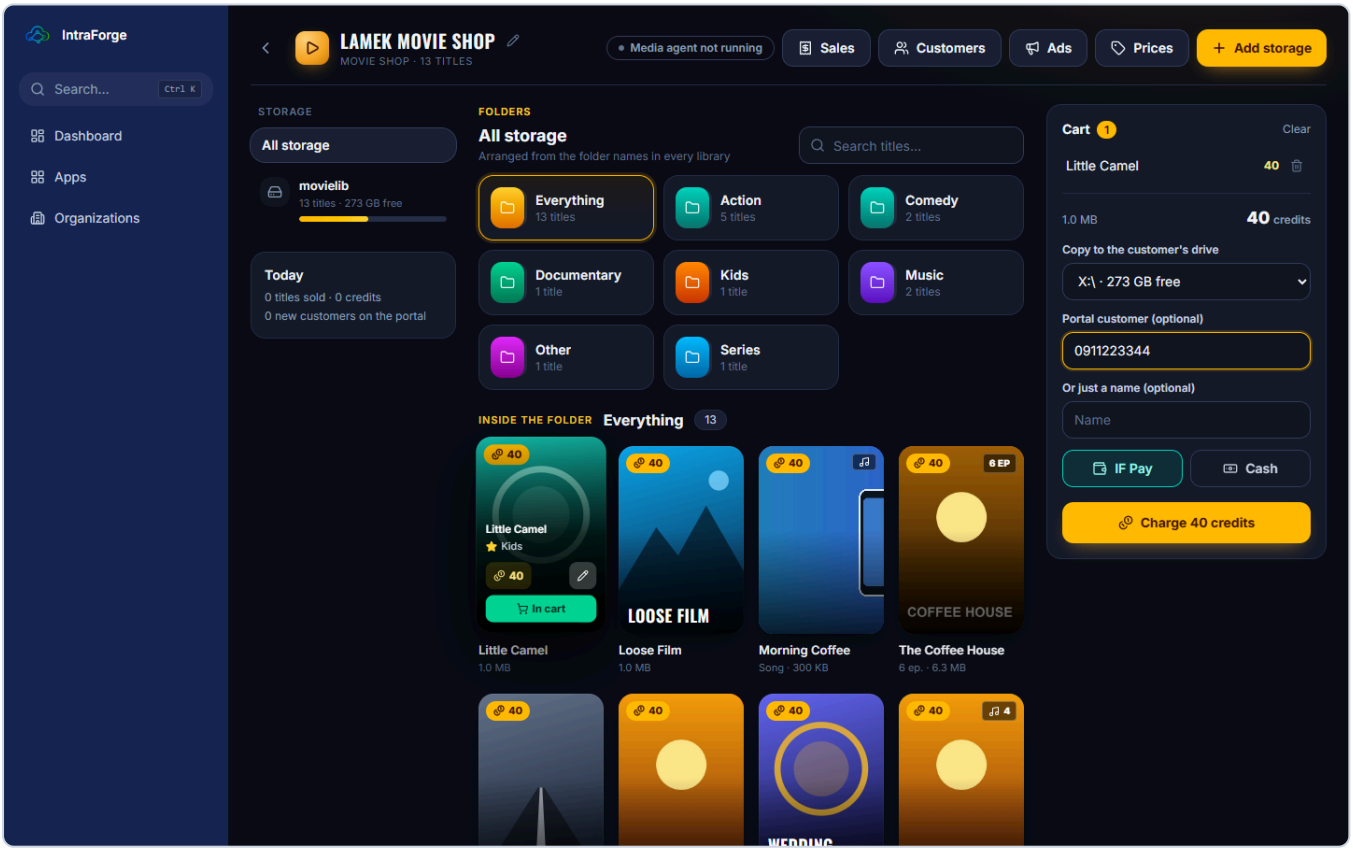

Prices

Selling at the counter

1. Plug the customer's USB drive into the shop PC.
2. **Add** the titles to the cart.
3. Choose the **customer's drive**. If the customer has a portal account, type their **phone number** under **Portal customer**: their free titles and (if ticked) their points apply.
4. Choose **IF Pay** (the customer scans the QR code with the wallet) or **Cash**, and press **Charge**.
5. The media agent copies the titles into a folder named after the shop; the sale shows each title's progress.

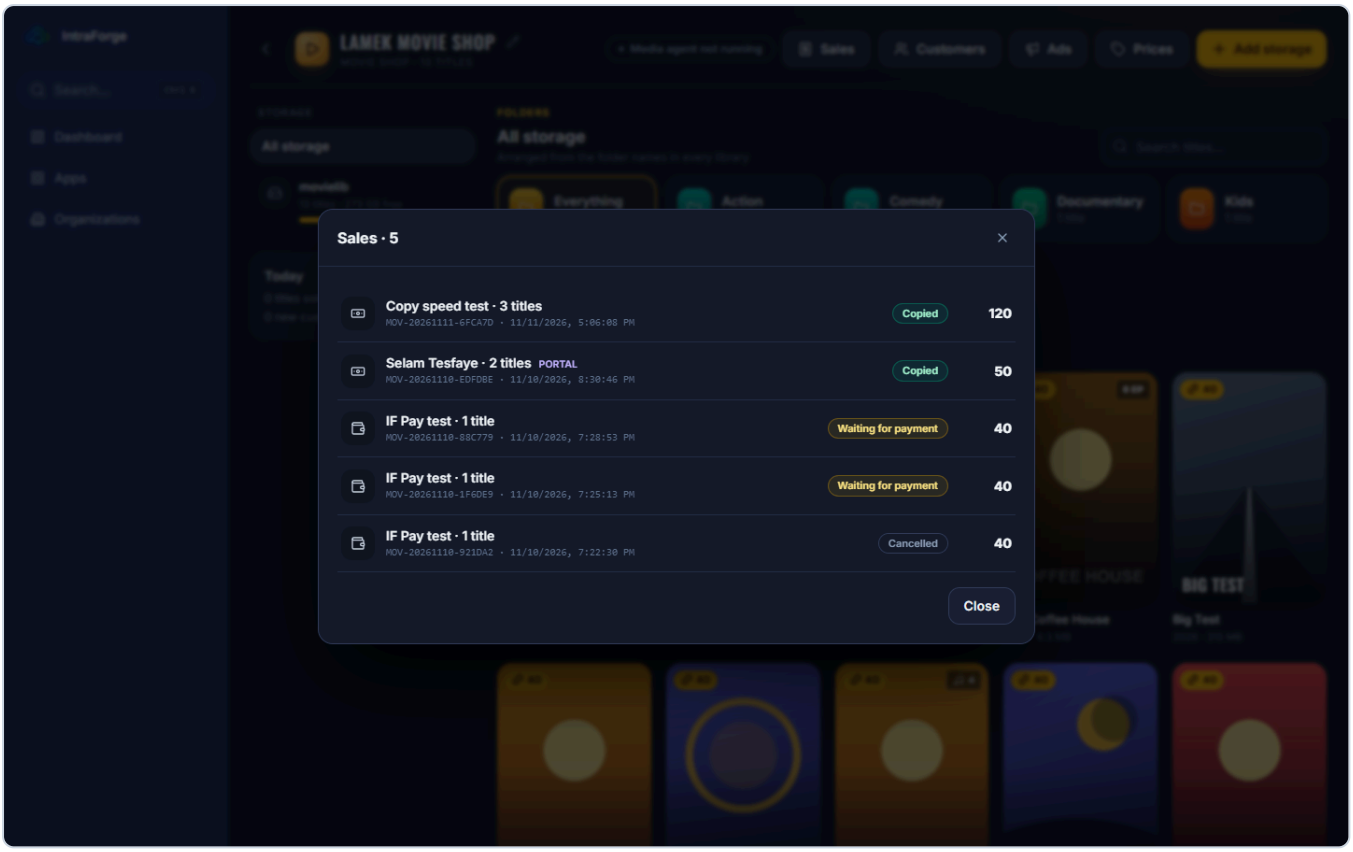

The cart

A portal customer at the counter

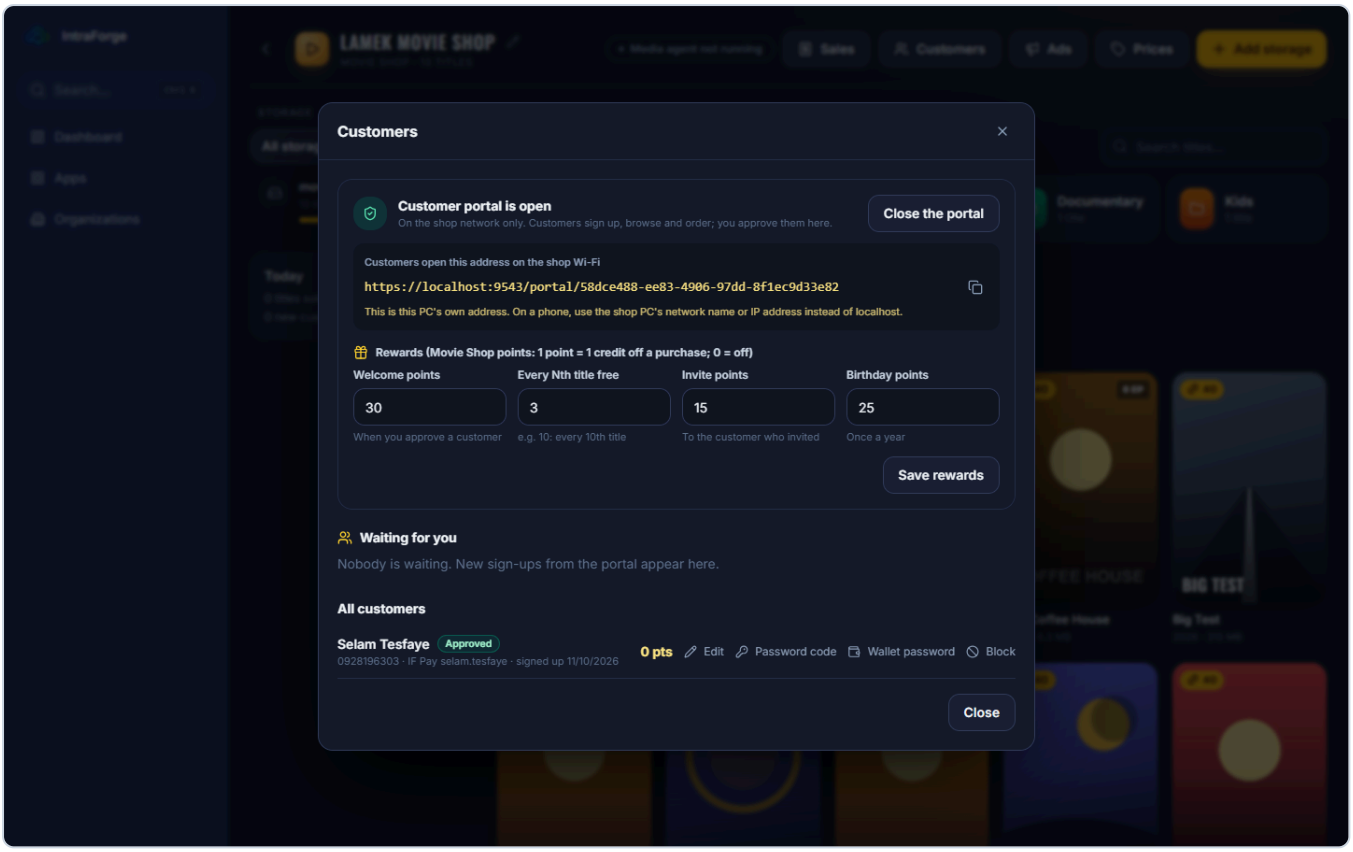

Sales lists every sale; open one to see its payment and copying, cancel it, or retry a failed copy.

Sales

Customers and rewards

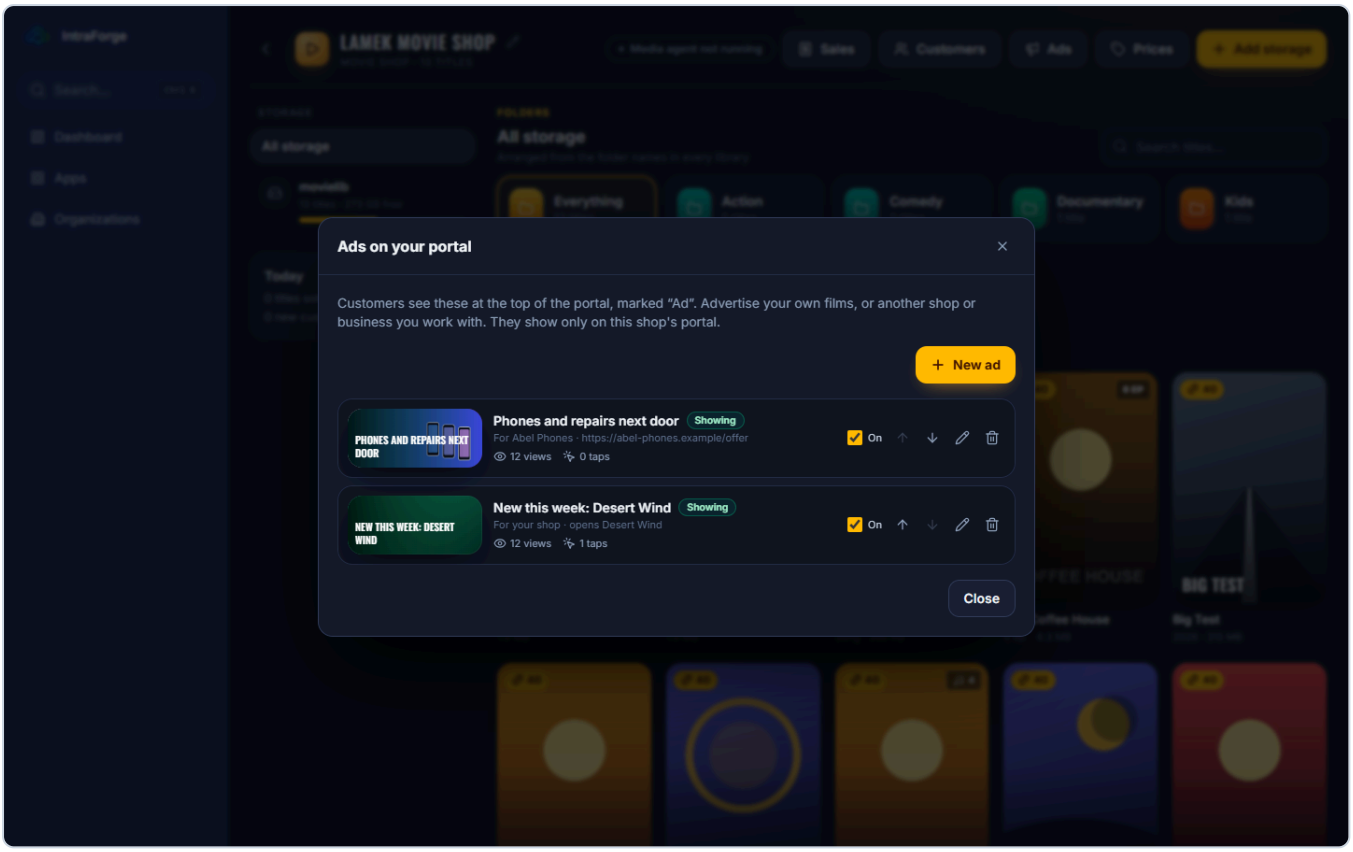

Customers lists the people who signed up on the portal. **Approve** opens their IF Pay wallet; you can **Reject**, **Block**, **Edit** them, give a **Password code** when they forgot their password, or give their wallet a new one-time password. Rewards (welcome points, referral points, birthday points, every Nth title free) are set in the portal settings.

Customers

Ads

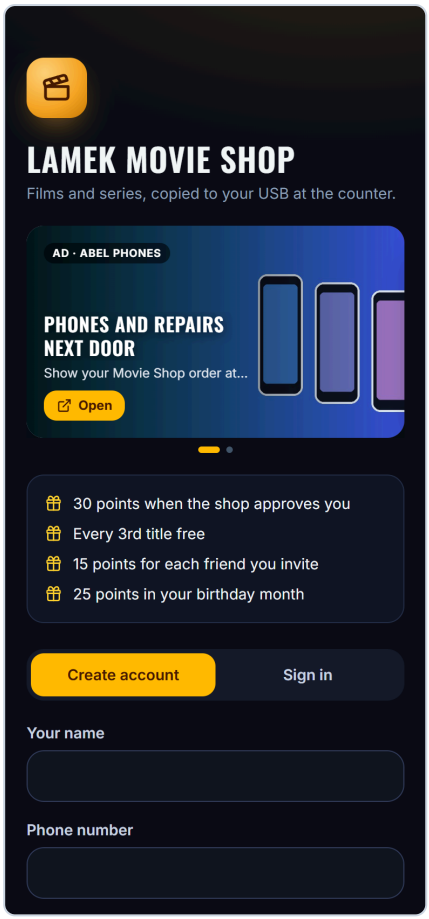

Ads shows pictures or titles on the customer portal (for example new arrivals).

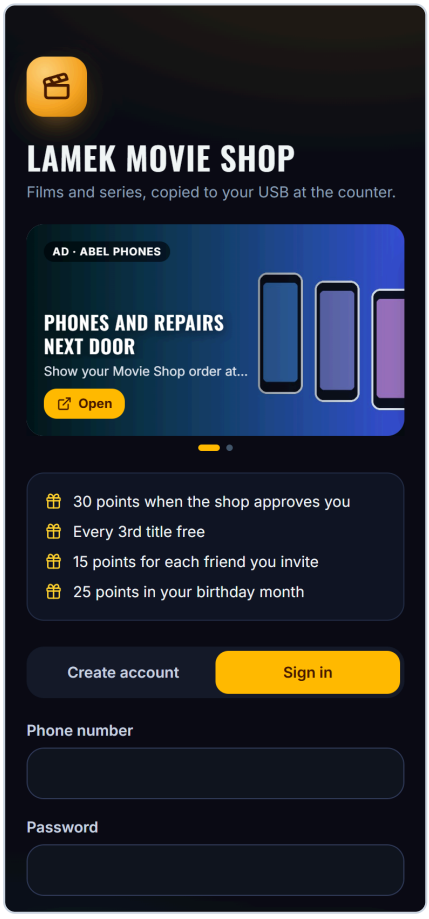

Ads

The customer portal (on the customer's phone)

On the shop Wi-Fi, customers open **https://movies.lan:8443** (or the portal address the owner shows). They sign up with a name, phone number and password and wait for the shop's approval; then they browse, order titles and pick them up at the counter, and see their points and wallet.

The portal on a phone

Signing in on the portal

> A customer who forgot their password presses **Forgot password?**, then asks at the counter for a **one-time code** (Customers > Password code) and enters it under **I have a code** with a new password.

Exercise 5

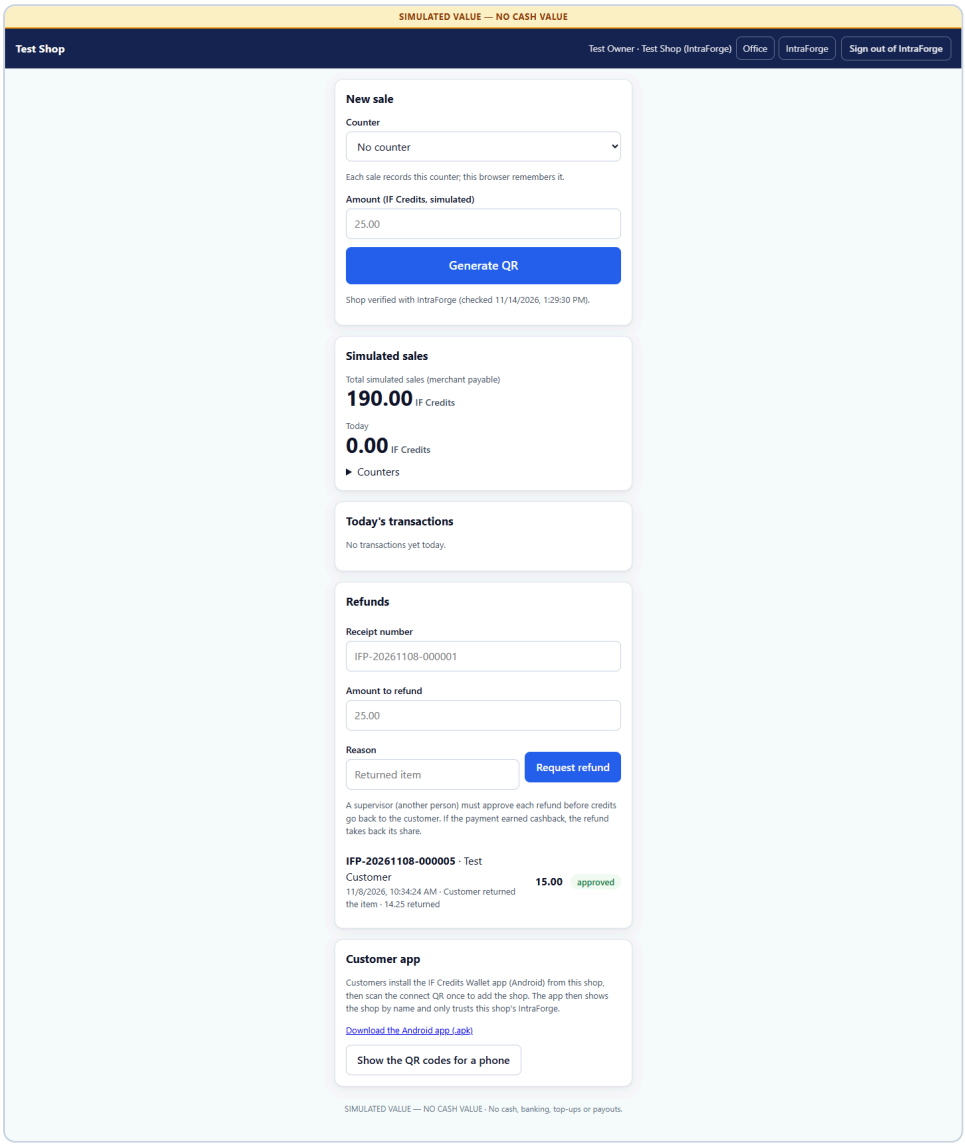

1. Sign up on the portal from a phone. 2. Approve the customer. 3. Order two titles from the phone. 4. Charge the order

at the counter with cash and watch it copy. 5. Find the sale in Sales and the customer's points on the phone.

Lesson 6 — IntraForge Pay

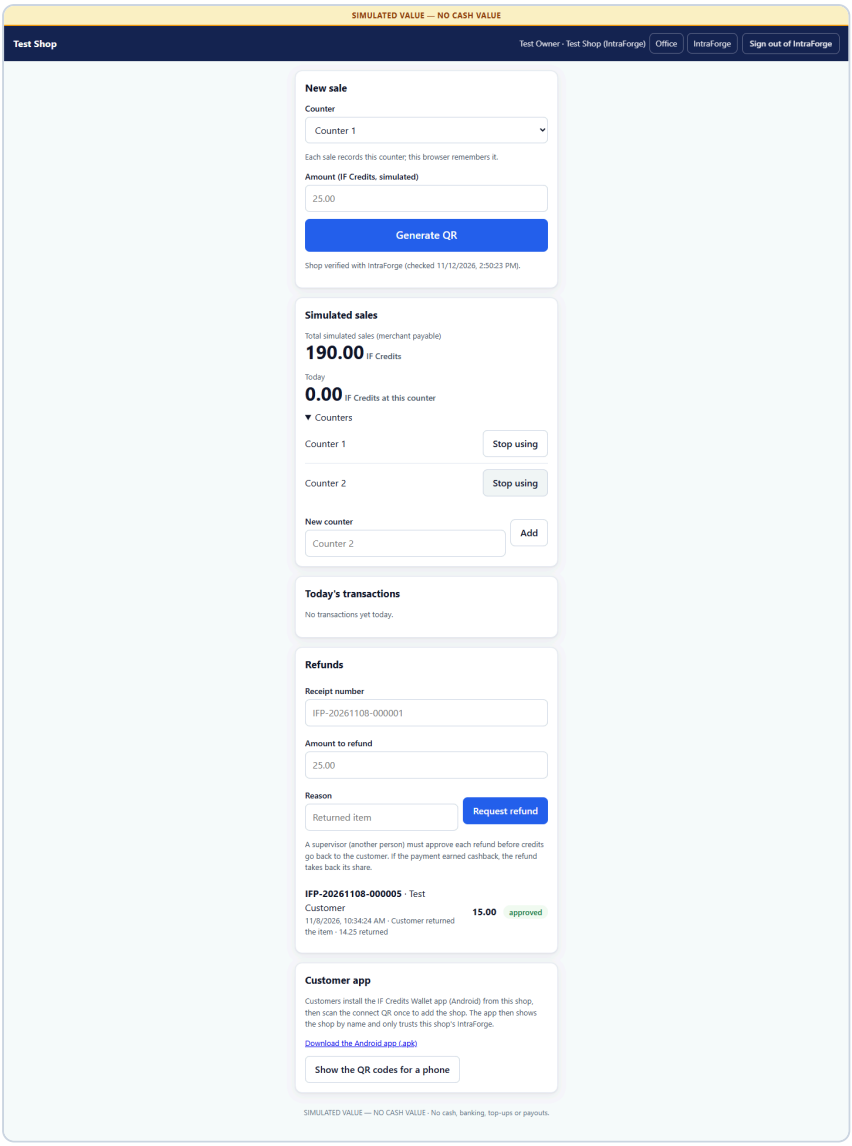

IntraForge Pay is the shop's wallet system. Customers hold **IF Credits** in a wallet (the **IF Credits Wallet** Android app, or the wallet web page) and pay by scanning a QR code. In this pilot the credits are **simulated: no real money**. Staff open Pay from **Apps > Open** with their IntraForge account; what they can do depends on their Pay role (**Pay Cashier**, **Pay Supervisor**, **Pay Manager**).

Taking a payment (cashier)

The Pay checkout screen

1. Choose your **Counter** once (the browser remembers it).
2. Type the **amount** and press **Generate QR**.
3. The customer scans the QR code with the wallet app and confirms the amount.
4. The status turns **paid** and the receipt appears under **Today's transactions**.

Counters: each cashier's own counter and the day per counter

Counters (Pay Manager)

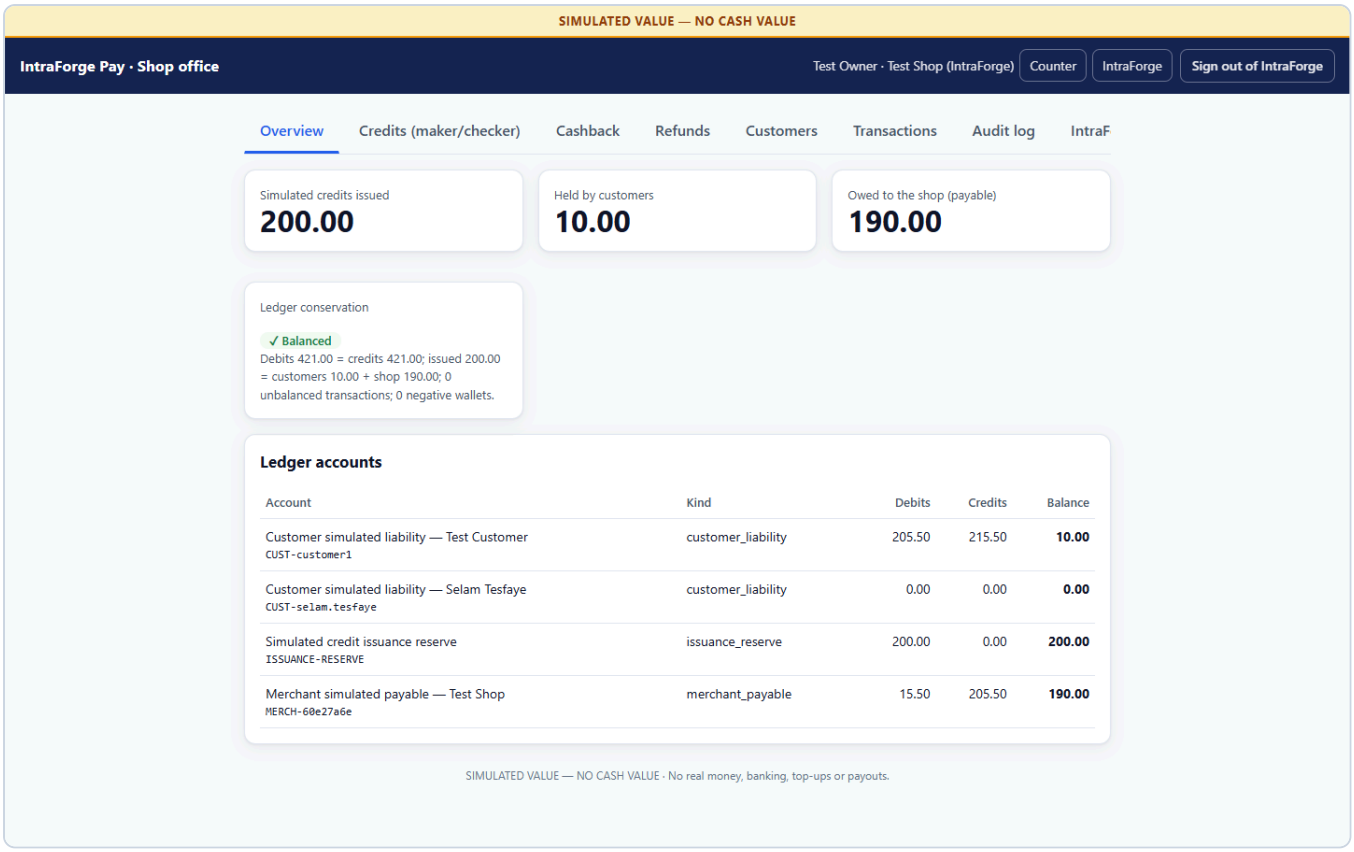

Simulated sales > Counters: add a counter (**New counter > Add**) or stop using one. The **Today** figure shows your counter's total; the list shows every counter's total and the shop's, in the shop's own time zone.

Refunds (cashier asks, supervisor approves)

In **Refunds**, type the **receipt number**, the **amount** and the **reason** and press **Request refund**. Another person, a supervisor, must approve it before the credits go back.

The office (managers and supervisors)

The **Office** page (top right) is for customer wallets, credit allocations (a manager asks, a supervisor approves) and the audit log.

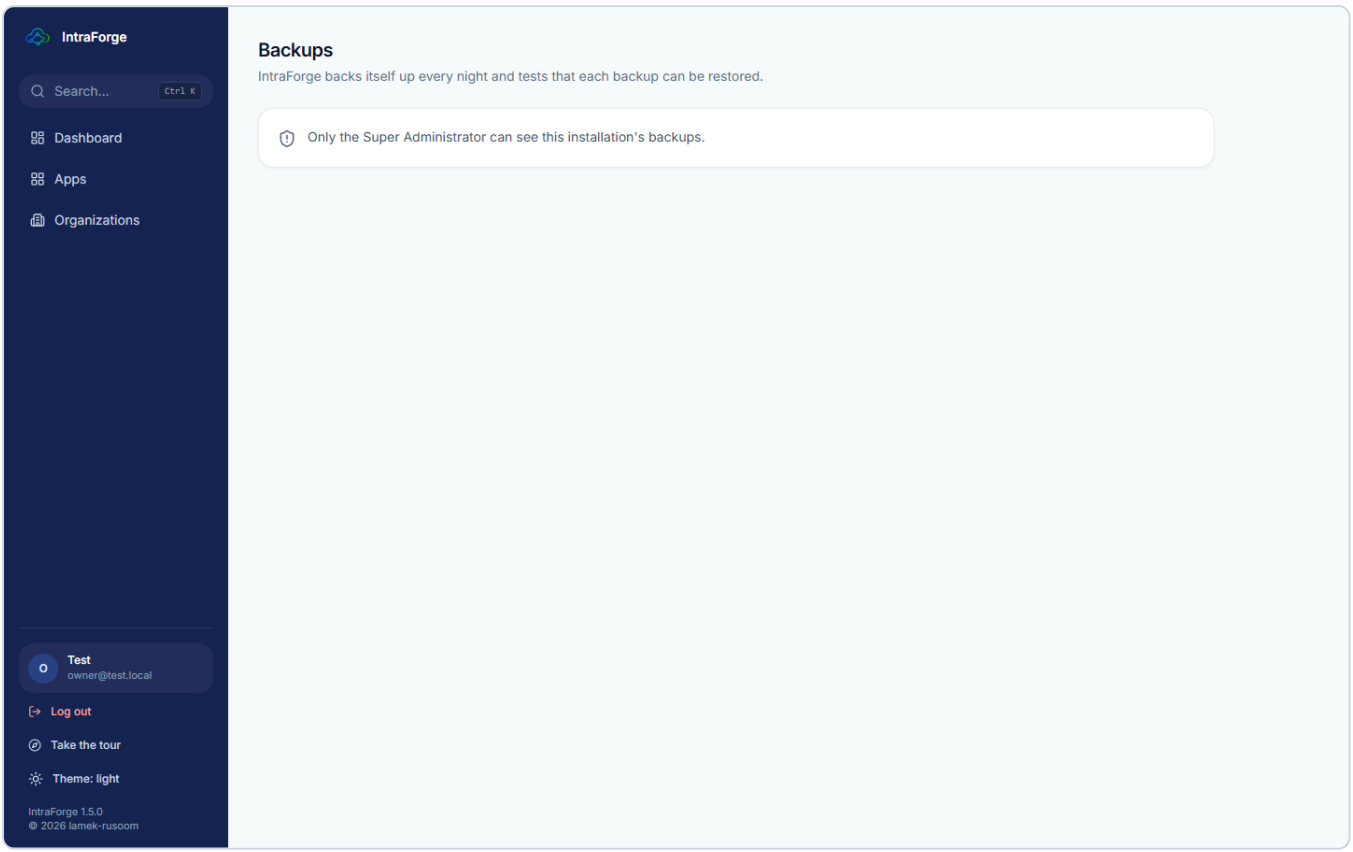

The Pay office

Lesson 7 — Keeping the shop safe

Backups

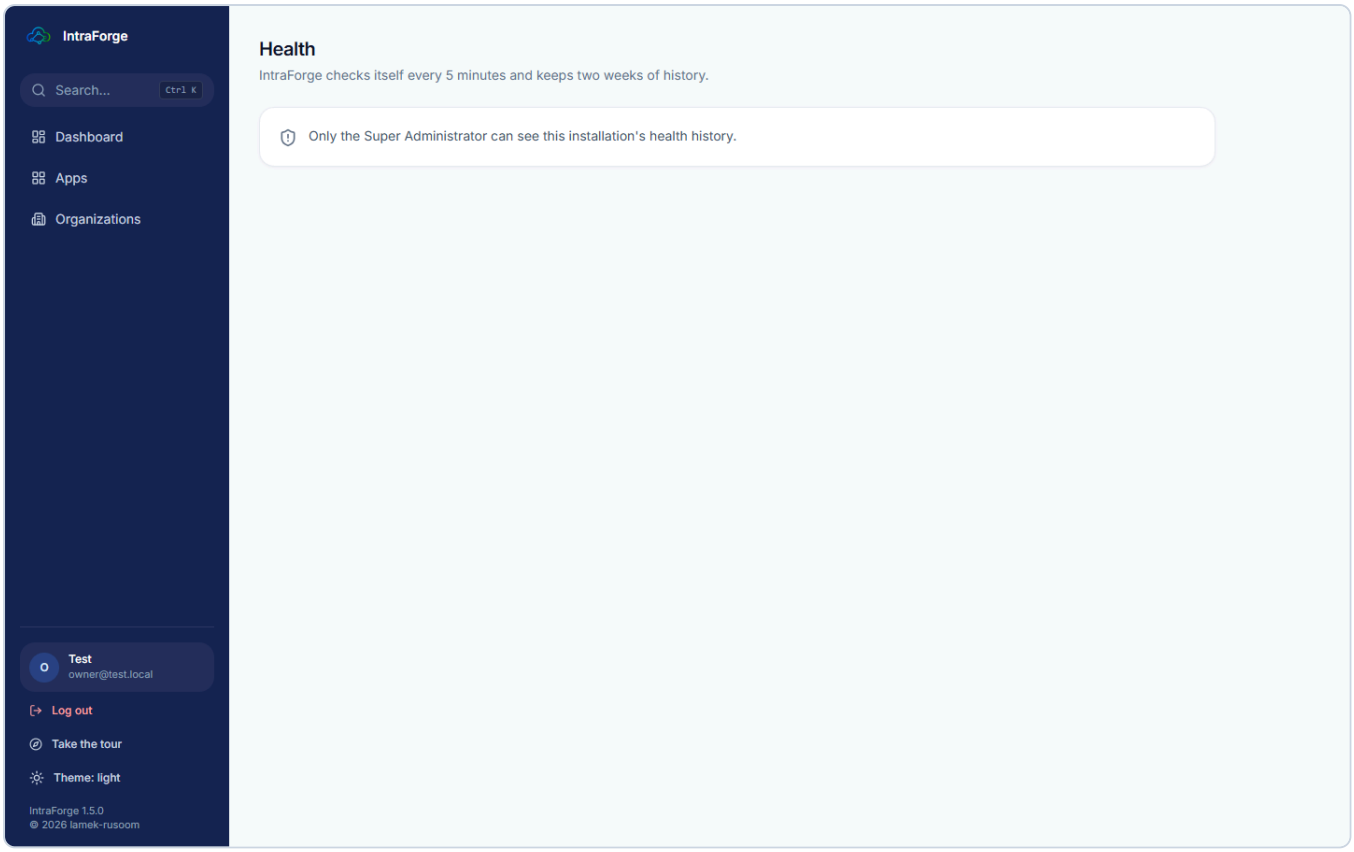

Dashboard > System health > Backups (the Super Administrator) shows the last good backup of each kind and whether its restore test passed. **Back up now** starts one. Restoring is done in the Control Center.

Backups

Health and alerts

Dashboard > System health > History and alerts shows every check every 5 minutes for two weeks. An alert opens when something keeps failing (a database, the job queue, file storage, an old backup, a nearly full disk, or the background jobs stopped) and closes by itself when it is fixed. Open alerts also show on the dashboard.

Health history and alerts

The audit log

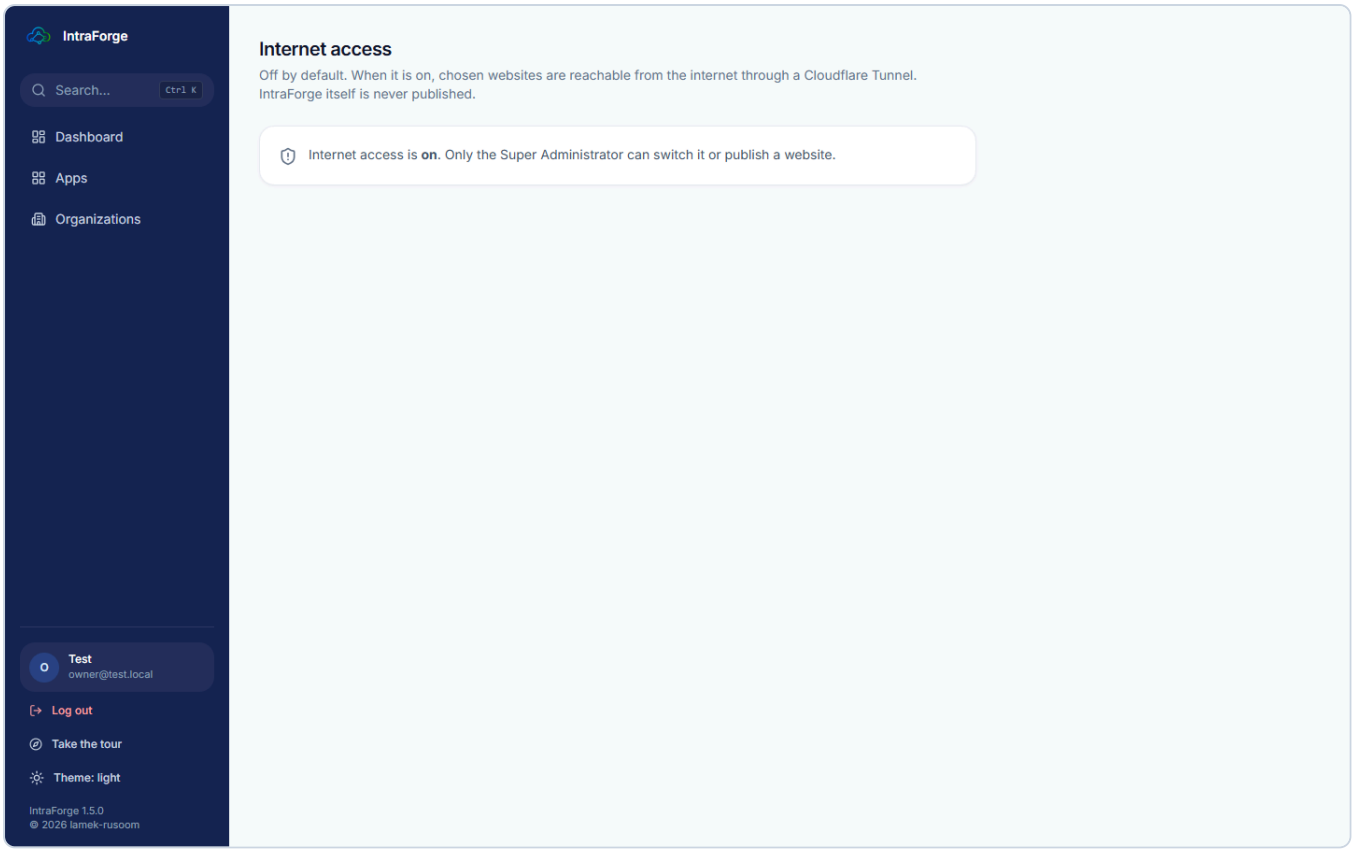

Organization > Audit log lists every important action — who did it, when, and whether it was allowed. Filter by action, resource or result.

The audit log

Internet access

IntraForge is **not** on the internet. Only the Super Administrator can switch **Internet access** on, to publish a chosen website through a Cloudflare Tunnel; IntraForge itself is never published.

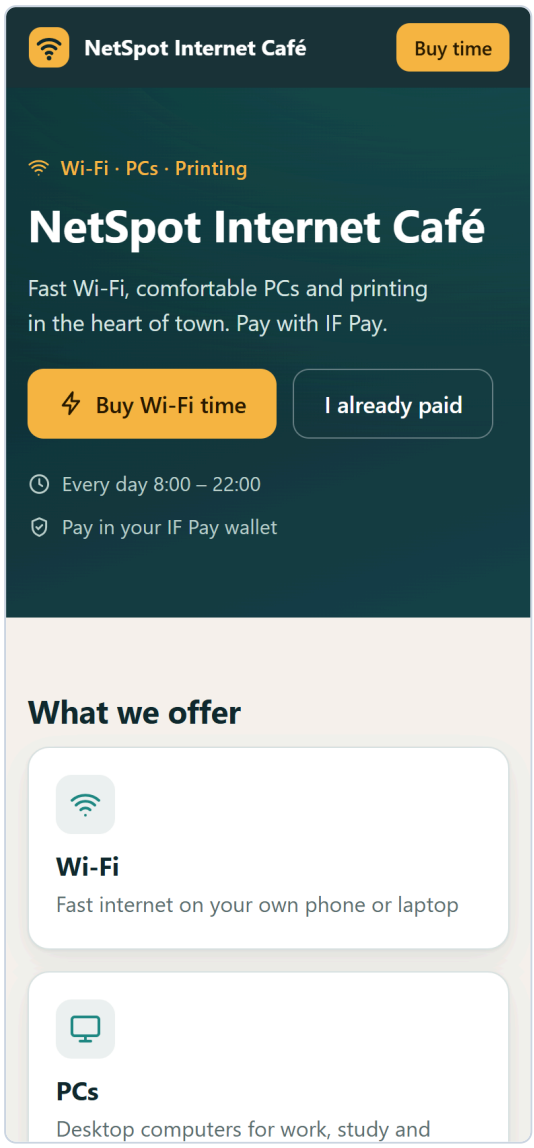

Internet access

Good habits

- Each person signs in with **their own** account — never share a password.
- Switch on **two-step sign-in** for the owner and managers, and keep the recovery codes on paper.
- Give people the **smallest role** that lets them do their job.
- Check the **Health** page and the backups once a week.

Lesson 8 — The internet café website

The **internet café website** sells Wi-Fi time on the customer's own phone. The customer chooses a package, pays with **IF Pay**, and gets a **Wi-Fi code** at once, which they type on the café Wi-Fi's login page. The codes come from the café's **router** (its hotspot vouchers); IntraForge sells them and keeps every order. The full set-up steps are in `examples/hosted-apps/internet-cafe/README.md`.

The café website on a phone

How it fits together

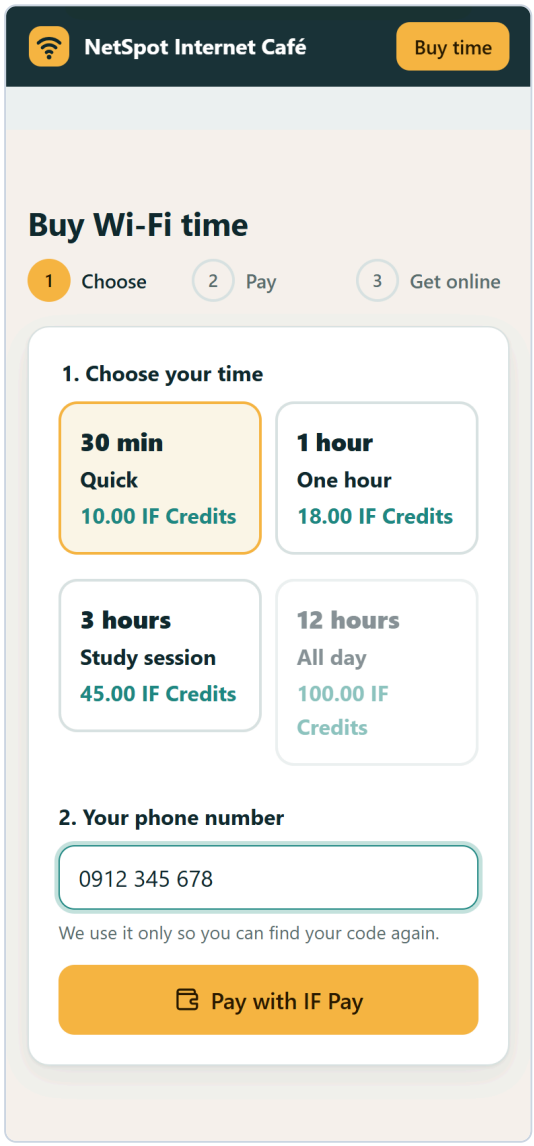

Who	Does what
The router	Makes the voucher codes and lets a phone online when its code is typed
IntraForge	Keeps the café's details, prices, codes and orders in the `Internet Cafe` database; runs the website
IF Pay	Takes the payment from the customer's wallet
The website	Shows prices, takes the order, shows the code only after IF Pay says "paid"

Setting up (the owner, once)

1. In the router: make voucher codes for each package (for example 30 min, 1 hour, 3 hours) and allow the IntraForge PC's address before login (the "walled garden").
2. In IntraForge: create the `Internet Cafe` database with its four tables, enter the packages and the café's details, and import the codes from a CSV file.
3. **Websites > New website**: upload `internet-cafe-site.zip` with the address `netspot`.
4. **Developer > Applications** > the website: **Allow IntraForge Pay**, and give it read and write on the `Internet Cafe` database.

> **Careful:** the two "unique" columns (`cafe_vouchers.code` and `cafe_orders.voucher`) are what stop one code being sold twice. The website refuses to sell until they are there.

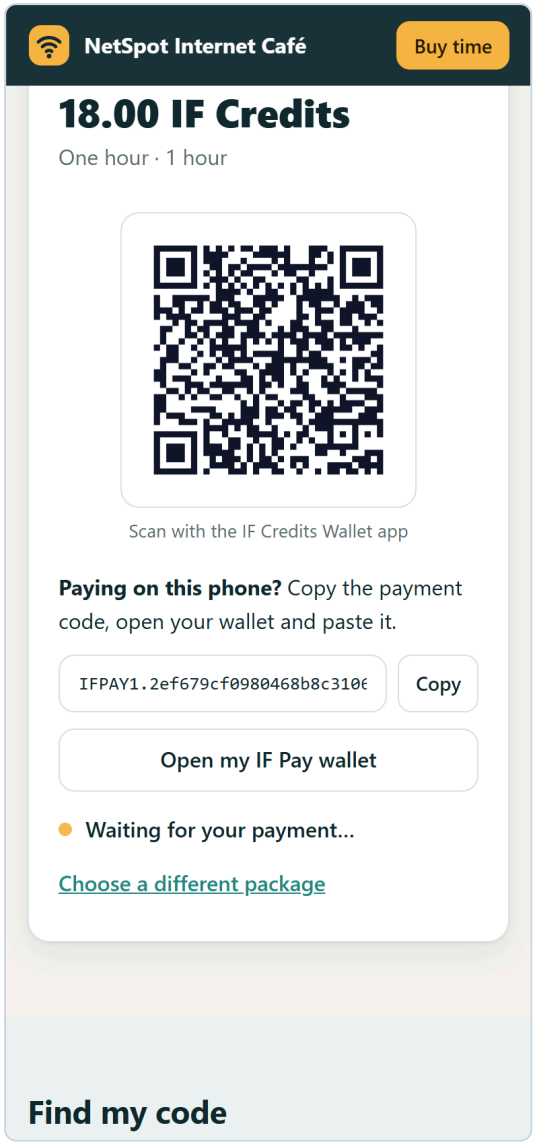

Buying time (the customer)

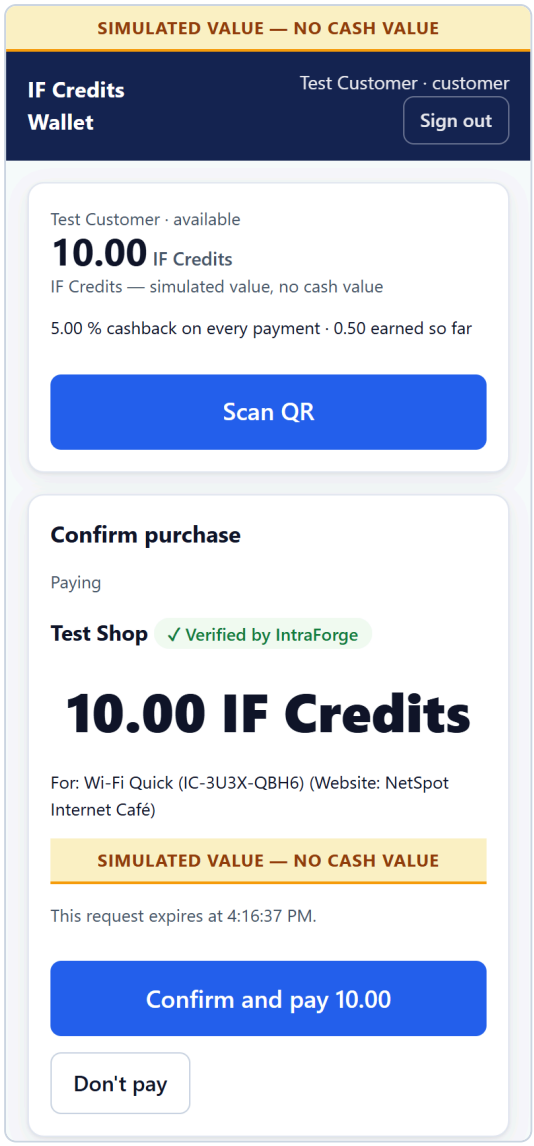

Choosing a package

1. Choose a package and type a phone number, then press **Pay with IF Pay**.

2. Pay: scan the QR code with the IF Credits Wallet from another phone — or, on the same phone, press **Copy**, then **Open my IF Pay wallet**, paste the code and confirm.

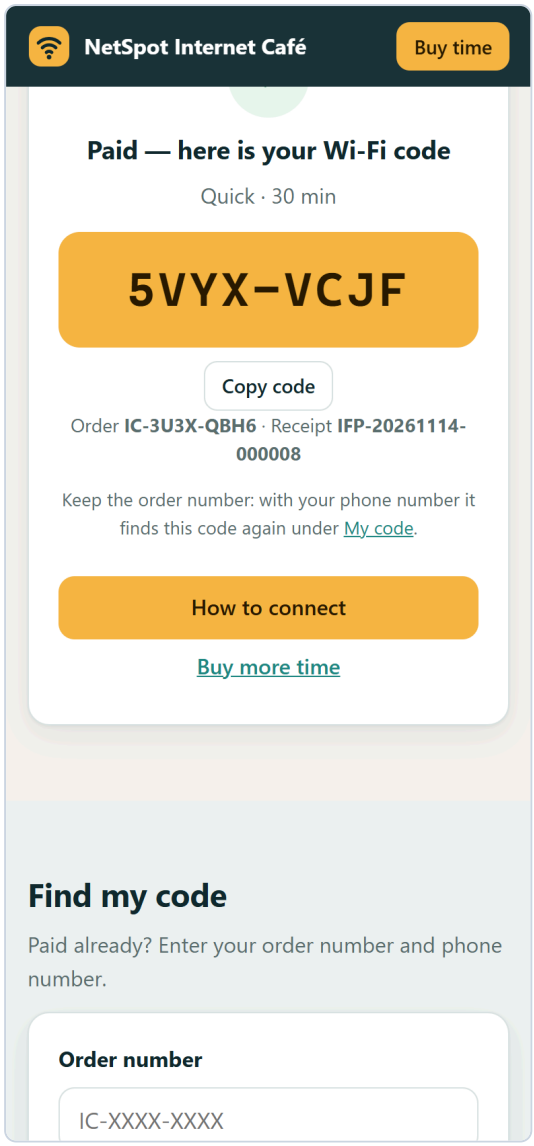

Paying

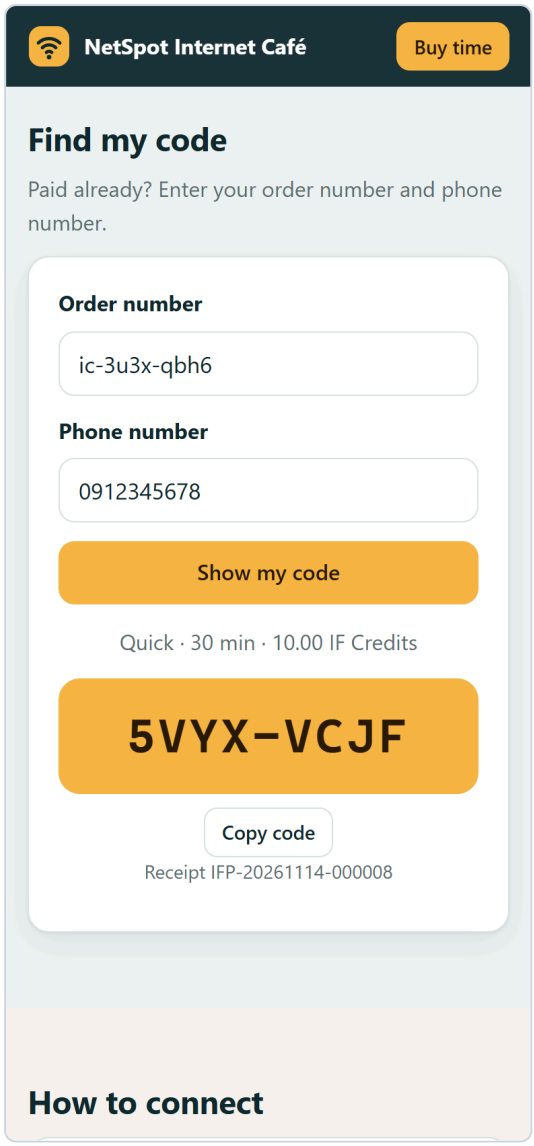

Confirming in the wallet

1. Back on the website the code appears by itself. Type it on the Wi-Fi login page.

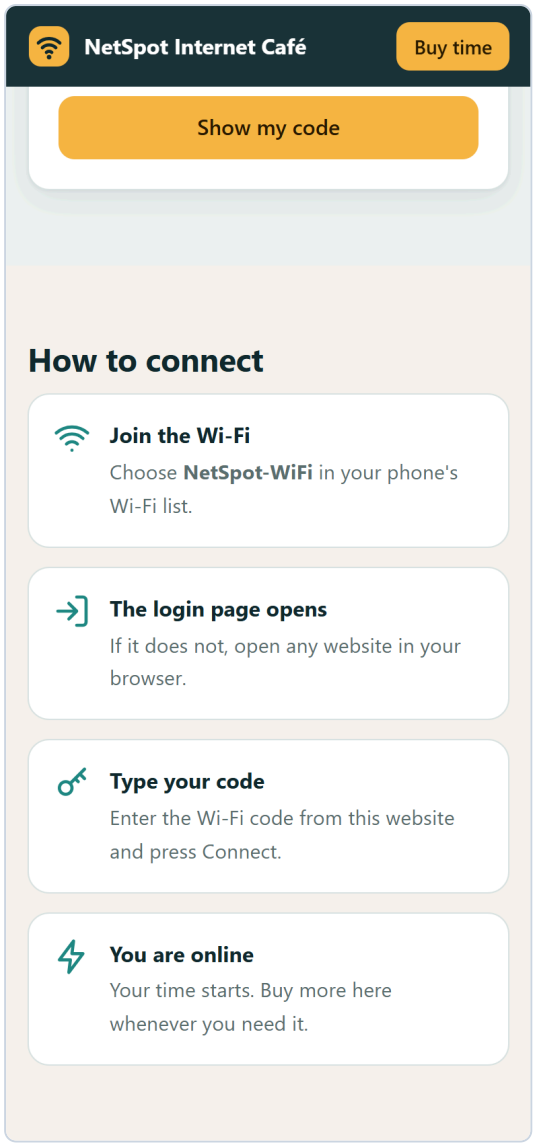

The Wi-Fi code

1. Lost it? **My code**: the order number and phone number show it again.

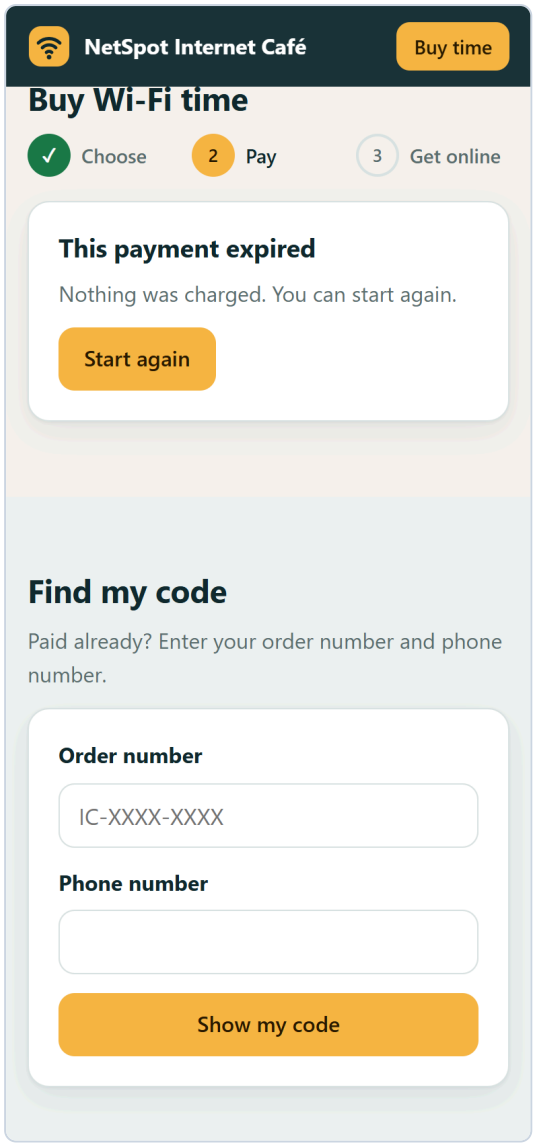

Finding a code again

How to connect

If the customer does not pay within about two minutes the QR code expires: nothing is charged and the code goes back on sale.

An expired payment

Every day (staff)

- The `cafe_orders` table lists every order: **paid** (with its receipt and code), **pending**, **expired**, **cancelled** or **failed**.
- A package with no codes left shows **Sold out** by itself. Import more codes from the router.
- "I paid but I have no code": use **My code** with the customer's order number and phone, or look up the order in `cafe_orders`. Its receipt number matches the IF Pay receipt.

Exercise 8

1. Add a package "Two hours" (120 minutes) and import three 120-minute codes. 2. Buy it on a phone with a test wallet.
2. Find the order in `cafe_orders` and check the code is marked **sold** in `cafe_vouchers`. 4. Start a purchase and do

not pay: after two minutes check the code is **available** again.

Lesson 9 — Practice and help

A training day plan

Time	Activity
30 min	Lesson 1 together: signing in, the dashboard, Ctrl K, your account
45 min	Lesson 4 (or 5) for the counter staff, with the exercise on a test copy
30 min	Lesson 6: a payment with the wallet app, a refund request and its approval
30 min	The owner: Lessons 2 and 7 — people, roles, backups, health
15 min	Questions; each person does their exercise alone

Checklists

Opening the shop (owner): the Control Center is green · the dashboard shows no health alert · last night's backup is "Done" with "Restore tested".

Every sale (cashier): right customer · right quantities · payment confirmed (paid, or cash taken) · receipt or invoice given.

Closing (manager): today's sales per counter in Pay · unpaid invoices checked · low-stock list read.

When something goes wrong

What you see	What to do
The page does not open	Is the shop PC on? Open the Control Center there: is IntraForge started and green?
"You don't have permission"	Your role does not allow this; ask the owner for the right role
"Too many attempts, wait a minute"	Wrong password several times: wait one minute
A certificate warning on another PC	Run **Trust-IntraForge-on-this-PC.cmd** once on that PC
Another PC cannot reach IntraForge	The shop Wi-Fi must be *Private*; Control Center > Shop network > **Update the address**
The licence banner says read-only	Activate the licence (Lesson 2) — your data is safe
A Movie Shop copy failed	Is the USB drive still plugged in and has room? Open the sale and press **Retry**
A payment is still "waiting"	The customer must confirm in the wallet; the QR expires after a few minutes — make a new one

Where to learn more

- **Take the tour** at the bottom of the sidebar.

- The engineering handbook (for technical staff) and the AI assistant pack (ask questions in AnythingLLM).
